

Check-list of the vascular plants collected during Iter Mediterraneum II

Avinoam Danin

Introduction

The following is a complete list of the specimens collected during Iter Mediterarneum II in Israel, arranged alphabetically by names of taxa. For each taxon the correct name and publication reference is given, together with synonyms (mostly those that were used in previous publications concerning the flora of the area) in square brackets. Med-Checklist nomenclature has been followed in most cases. Notulae on special cases are included in the text. *Euphorbia chamaepeplus* var. *angustifolia* and *Phillyrea latifolia* subsp. *daninii* are described as new. *Sedum litoreum* subsp. *praesidis* is newly combined.

The identification of the vascular plants collected has been made by the members of the expedition and by several specialists, as follows:

- F. Axelrod (Jerusalem and Puerto Rico), *Picris*.
- A. Danin (Jerusalem) most of the specimens collected.
- Z. Díaz Lifante (Sevilla), *Asphodelaceae*.
- F. Ehrendorfer (Vienna), *Rubiaceae*.
- W. Greuter (Berlin), *Aehtorrhiza*.
- H' t. Hart (Utrecht), *Crassulaceae*.
- D. Heller (Jerusalem), *Trifolium*.
- C. C. Heyn (Jerusalem), *Adonis*, *Calendula*, *Gagea*, *Lotus*, *Medicago*.
- F. Kollmann (Jerusalem), *Allium*.
- U. Plitmann (Jerusalem), *Cuscuta*, *Vicia*, *Lathyrus*.
- T. Raus (Berlin), *Asteriscus*, *Hedypnois*, *Ononis*, *Torilis*.
- H. Scholz (Berlin), *Gramineae*.
- B. Valdés (Sevilla), comments on species from all families.
- B. Zimmer (Berlin), *Cheilanthes*.

Check-list

Aaronsohnia factorovskyi Warburg & Eig in Bull. Inst. Agric. Nat. Hist. Tel-Aviv 6: 40 (1927)

Dead Sea Valley: near Ormat's solar ponds, 2 km N of the Dead Sea northern coast. Salty soil in wadis, 35°30'31"E-31°48'10"N, (-)370 m. 22.03.1989, 07.005.

Abutilon fruticosum Guillemin & Perrottet in Guillemin & al., Fl. Seneg. Tent.: 70 (1831) [*A. denticulatum* (Fresen.) Webb]

Dead Sea Valley: near Mizpe Dragot, 15 km N of En Gedi. Slopes and small cliffs of dolomite and wadis, 35°19'20"E-31°35'15"N, (-) 350 m. 22.03.1989, 06.009.

Acacia raddiana Savi, Acacie Egiz.: 1 (1830)

Arava Valley: Yotvata. Disturbed ground and wadis, 35°03'30"E-29°59'10"N. 100 m. 29.03.1989, 31.002.

Acacia tortilis (Forsskål) Hayne, Getreue Darstell. Gew. 10: tab. 31 (1827)

Arava Valley: Yotvata. Disturbed ground and wadis, 35°03'30"E-29°59'10"N. 100 m. 29.03.1989, 31.003.

Acanthus syriacus Boiss., Diagn. Pl. Orient. 11: 135 (1849)

Samarian Desert: near Maále Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.032.

Achillea santolina L., Sp. Pl.: 896 (1753)

Judean Desert: near Mishor Adumim. Stony slopes with nari crusts on Senonian chalk. Brown lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis brachyodon*, 35°19'20"E-31°48'10"N, 250 m. 22.03.1989, 05.054; **Northern Negev:** 5 km N of Beer Sheva. Brown loessial lithosol, *Noaeetum mucronatae*, 34°47'00"E-31°18'30"N. 300 m. 26.03.1989, 15.003.

Adonis dentata Delile, Descr. Egypte, Hist. Nat.: 287 (1813)

Judean Desert: near Mishor Adumim. Stony slopes with nari crusts on Senonian chalk. Brown lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis brachyodon*, 35°19'20"E-31°48'10"N, 250 m. 22.03.1989, 05.030; **Northern Negev:** 5 km N of Beer Sheva. Brown loessial lithosol, *Noaeetum mucronatae*, 34°47'00"E-31°18'30"N. 300 m. 26.03.1989, 15.054.

Adonis microcarpa DC., Syst. Nat. 1: 223 (1817) [*A. cupaniana* Guss.]

Upper Galilee: Near Ya'ara. Terra Rossa on hard limestone, maquis and clearings, 35°12'00"E-33°04'10"N. 200 m. 5.4.89, 53.023; **Judean Desert:** near Mishor Adumim. Stony slopes with nari crusts on Senonian chalk. Brown lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis brachyodon*, 35°19'20"E-31°48'10"N, 250 m.

22.03.1989, 05.031; **Philistine Plain:** 1 km S of Ashdod. Stable sand dunes, 34°40'02"E-31°46'50"N, 20 m. 21.03.1989, 04.009; **Judean Foothills:** near Sedot Micha. Brown rendzina developing on nari crusts over Eocene chalk. Much of the area was burnt in summer 1988. *Ceratonia siliqua* - *Pistacia lentiscus* association, 34°54'43"E-31°43'25"N, 220 m. 21.03.1989, 02.081; **Northern Negev:** 5 km N of Beer Sheva. Brown loessial lithosol, *Noaeetum mucronatae*, 34°47'00"E-31°18'30"N. 300 m. 26.03.1989, 15.053.

Aegialophila pumilio (L.) Boiss., Diagn. Pl. Orient. 10: 105 (1849)

Coastal Carmel: Atlit, coastal sands, salt marsh margins, and hard calcareous sandstone (kurkar), 34°56'00"E-32°42'20"N. 2-20 m. 6.4.89, 58.023.

Aegilops geniculata Roth, Bot. Abh.: 45 (1787) [*A. ovata* L.]

Judean Mts: Givat Ram. 0.5 km E of the entrance to the University Campus. 37.002; **Coastal Galilee:** coast of Rosh Haniqra. Hard calcareous sandstone (kurkar), gravels and sandy soil in the sea-spray zone, 35°05'07"E-33°05'30"N. 10 m. 5.4.89, 54.035.

Aegilops kotschyi Boiss., Diagn. Pl. Orient. 7: 129 (1846)

Northern Negev: sands of Nahal Sekher, 15 km S of Beer Sheva. Loessial stable sandy soil, *Noaeetum mucronatae*, 34°49'20"E-31°06'00"N. 330 m. 26.03.1989, 16.050.

Aegilops peregrina (Hackel) Maire & Weiller in Maire, Fl. Afrique N. 3: 358 (1955)
[*A. variabilis* Eig]

Judean Desert: near Mishor Adumim. Stony slopes with nari crusts on Senonian chalk. Brown lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis brachyodon*, 35°19'20"E-31°48'10"N, 250 m. 22.03.1989, 05.010; **Lower Jordan Valley:** 1 km NE of Pzael, 18 km N of Jericho. Salty or leached calcareous soil, 35°27'30"E-32°03'20"N, (-) 270 m. 23.03.1989, 09.037; **Judean Desert:** 5 km SW of Jericho, near St. John's Monastery. Stony slopes, 35°27'55"E-31°50'30"N, (-)10 m. 23.03.1989, 11.002; **Kinnrot Valley (Upper Jordan Valley):** 2 km NE of Kibbutz Haon. Steep limestone and sandstone slopes, 35°38'30"E-32°44'00"N. (-)150 m. 2.4.89, 39.018; **Coastal Carmel:** Atlit, coastal sands, salt marsh margins, and hard calcareous sandstone (kurkar), 34°56'00"E-32°42'20"N. 2-20 m. 6.4.89, 58.028.

Aerva javanica (Burm. fil.) Schultes in Roemer & Schultes, Syst. Veg. 5: 565 (1820)
[*A. persica* (Burm. fil.) Merr.]

Southern Negev: Nahal Paran junction with Ramon-Elat road. Pebbly wadi beds, 35°56'20"E-30°20'15"N. 390 m. 29.03.1989, 27.010.

Aetheorhiza bulbosa (L.) Cass. in Cuvier, Dict. Sci. Nat. 48: 426 (1827) subsp. *bulbosa* [*Crepis bulbosa* (L.) Tausch]

Coastal Galilee: coast of Rosh Haniqra. Hard calcareous sandstone (kurkar), gravels and sandy soil in the sea-spray zone, 35°05'07"E-33°05'30"N. 10 m. 5.4.89, 54.012; **Coastal Carmel:** Atlit, coastal sands, salt marsh margins, and hard calcareous sandstone (kurkar), 34°56'00"E-32°42'20"N. 2-20 m. 6.4.89, 58.014.

When describing *Aetheorhiza bulbosa* subsp. *microcephala*, Rechinger (in Phyton (Horn) 16: 211-220. 1974) cited specimens from Greece, Turkey, Cyprus, Syria and Lebanon, whereas the widespread but more westerly subsp. *bulbosa* was said to reach Egypt and (again) Cyprus; no plants from Israel were examined by him. Meikle (Fl. Cyprus 2: 1014-1015. 1985) reports that the situation in Cyprus is complex: "While the differences between the subspecies (based chiefly on size of involucre and achenes) are evident outside Cyprus, I do not find that any satisfactory distinctions can be drawn between the individuals which form the polymorphic population of the species on the island.....; they may represent yet another subspecies". My own experience in Greece leads me to accept *A. bulbosa* subsp. *microcephala* Rech. fil. as a distinctive and little variable taxon, characterized not only by its small, narrowly cylindrical flowering heads but also by a low number of inner involucral bracts and by major leaves that are runcinate along the petiole but end in a subentire blade; so defined, it occurs throughout S Greece, the Aegean region and W Turkey, where it replaces subsp. *bulbosa*. The populations found in Cyprus and in more eastern areas are indeed very variable, but it remains to be demonstrated that they include individuals of genuine subsp. *microcephala*. The two specimens collected in Israel definitely fall within the range of variation of subsp. *bulbosa*.

W. GREUTER

Aethionema heterocarpum Trev. in Bot. Zeitung (Berlin) 5: 409 (1847)

Golan: Har Shipon. Volcanic ash, 35°45'50"E-33°04'17"N. 740 m. 4.4.89, 46.015.

Agathophora alopecuroides (Delile) Bunge in Mem. Acad. Imp. Sci. Saint Pétersburg, 4(11): 19. 1862. [*Halogeton alopecuroides* (Delile) Moq.]

Negev Highlands: Makhtesh Hathira, Nahal Hathira. Sandy-silty wadi, 35°01'00"E-30°57'03"N. 310 m. 30.03.1989, 33.006.

Ainsworthia trachycarpa Boiss., Diagn. Pl. Orient. 10: 43 (1849)

Samarian Desert: near Maále Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.083; **Bet-Shean Valley:** 6 km SSW of Bet-Shean. Slightly saline seepages with date palms and *Phragmites australis*, dark clayey soil, 35°31'00"E-32°27'30"N. (-)200 m. 2.4.89, 38.015; **Kinnrot Valley (Upper Jordan Valley):** 2 km NE of Kibbutz Haon. Steep limestone and sandstone slopes, 35°38'30"E-32°44'00"N. (-)150 m. 2.4.89, 39.053.

Aizoon canariense L., Sp. Pl.: 488 (1753)

Dead Sea Valley: near Mizpe Dragot, 15 km N of En Gedi. Slopes and small cliffs of dolomite and wadis, $35^{\circ}19'20"E-31^{\circ}35'15"N$, (-) 350 m. 22.03.1989, 06.067; **Southern Negev:** 8 km SE of Mizpe Ramon, Nahal Gevanim. Magmatic rocks (Nordmarkite), slopes, rock outcrops and wadi beds, $34^{\circ}53'15"E-30^{\circ}35'00"N$. 520 m. 29.03.1989, 26.061.

Aizoon hispanicum L., Sp. Pl.: 488 (1753)

Lower Jordan Valley: 1 km NE of Pzael, 18 km N of Jericho. Salty or leached calcareous soil, $35^{\circ}27'30"E-32^{\circ}03'20"N$, (-) 270 m. 23.03.1989, 09.042; **Negev Highlands:** 8 km SW of Yerokham. Loessial soil and stony slopes, $34^{\circ}53'10"E-30^{\circ}56'00"N$. 500 m. 27.03.1989, 24.006.

Ajuga chamaepeytis (L.) Schreber, Pl. Verticill. Unilab.: 24 (1773), subsp. *chia* (Schreber) Arcangeli, Comp. Fl. Ital.: 560 (1882) [A. *chia* Schreber]

Judean Foothills: near Sedot Micha. Brown rendzina developing on nari crusts over Eocene chalk. Much of the area was burnt in summer 1988. *Ceratonia siliqua* - *Pistacia lentiscus* association, $34^{\circ}54'43"E-31^{\circ}43'25"N$, 220 m. 21.03.1989, 02.067; **Samarian Desert:** near Ma'ale Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, $35^{\circ}05'30"E-31^{\circ}52'50"N$, 250 m. 23.03.1989, 08.085; **Judean Mts:** Jerusalem. near Ora. Terraces on marly-chalk with poor vegetation of *Coridothymetum capitati*, $35^{\circ}09'E-31^{\circ}45'15"N$, 780 m. 24.03.1989, 12.020; **Kinnrot Valley (Upper Jordan Valley):** near En Sheva (Tabkha). South-facing limestone slope, $35^{\circ}32'20"E-32^{\circ}52'20"N$. (-) 200 m. 3.4.89, 40.010; **Golan:** near the ancient synagogue of Qazrin. Protogrumusol on basalt, $35^{\circ}42'32"E-32^{\circ}59'10"N$. 350 m. 3.4.89, 44.035.

Alcea acaulis (Cav.) Alef. in Österr. Bot. Z. 12: 251 (1862)

Coastal Galilee: coast of Rosh Hanikra. Hard calcareous sandstone (kurkar), gravels and sandy soil in the sea-spray zone, $35^{\circ}05'07"E-33^{\circ}05'30"N$. 10 m. 5.4.89, 54.010.

Alcea galilaea Zohary in Bull. Res. Council Israel, Sect. D, Bot., 11: 224, f. 2 (1963)

Kinnrot Valley (Upper Jordan Valley): 2 km NE of Kibbutz Haon. Steep limestone and sandstone slopes, $35^{\circ}38'30"E-32^{\circ}44'00"N$. (-) 150 m. 2.4.89, 39.031.

Alkanna strigosa Boiss. & Hohen. in Boiss., Diagn. Pl. Orient. 4: 46 (1844)

Judean Desert: near Mishor Adumim. Stony slopes with nari crusts on Senonian chalk. Brown lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis brachyodon*, $35^{\circ}19'20"E-31^{\circ}48'10"N$, 250 m. 22.03.1989, 05.014; **Northern Negev:** 5 km N of Beer

Sheva. Brown loessial lithosol, *Noaeetum mucronatae*, 34°47'00"E-31°18'30"N. 300 m. 26.03.1989, 15.051.

Alkanna tinctoria Tausch in Flora (Regensburg) 7: 234 (1824), subsp. *anatolica* Huber-Morath in Bauhinia 4: 206 (1971). [*A. tuberculata* (Forsskål) Meikle (non Greuter)]

Philistine Plain: 11 km S of Ashkelon. Sandy soil developed on Kurkar (calcareous sandstone). *Corydothymetum capitati*, 34°34'34"46"E-31°34'20"N, 70 m. 21.03.1989, 03.081.

The plants collected (03.081) clearly differ from those of the W. Mediterranean particularly by their smaller flowers and the canescent setose indumentum. They should be distinguished at a subspecific level as previously recognized by Huber-Morath (in Davis, Fl. Turkey 6: 425-426. 1978) and Greuter & al. (Med-Checklist 1: 68. 1984). Although neither Feinbrun-Dothan (Fl. Palaest. 3: 78. 1978), nor Greuter & al. (l.c.) reported this subspecies for Israel, the records of *A. tinctoria* Tausch and *A. tinctoria* subsp. *tinctoria* for Israel, or at least part of them, must be referred to subsp. *anatolica*. B. VALDÉS

Allium artemisiectorum Eig & Feinbrun in Palestine J. Bot., Jerusalem Ser., 3: 18-19, f. 30 (1943)

Much of the area was burnt in summer 1988. *Ceratonia siliqua* - *Pistacia lentiscus* association, 34°54'43"E-31°43'25"N, 220 m. 21.03.1989, 02.058; Mt. Hermon: near the tomb and oak reserve of Sheikh Othman, 1 km E of Qalaát Namrud, 35°43'50"E-33°15'00"N. 800 m. 4.4.89, 51.003.

Anchusa milleri Sprengel, Nachtr. Bot. Gart. Univ. Halle: 10 (1801)

Dead Sea Valley: near Mizpe Dragot, 15 km N of En Gedi. Slopes and small cliffs of dolomite and wadis, 35°19'20"E-31°35'15"N, (-) 350 m. 22.03.1989, 06.025; Southern Negev: 8 km SE of Mizpe Ramon, Nahal Gevanim. Magmatic rocks (Nordmarkite), slopes, rock outcrops and wadi beds, 34°53'15"E-30°35'00"N. 520 m. 29.03.1989, 26.024.

Anchusa strigosa Banks & Solander in Russell, Nat. Hist. Aleppo ed. 2, 2: 246 (1794)

Philistine Plain: 11 km S of Ashkelon. Sandy soil developed on Kurkar (calcareous sandstone). *Corydothermetum capitati*, 34°34'34"46"E-31°34'20"N, 70 m. 21.03.1989, 03.083.

Anchusa undulata L., Sp. Pl.: 133 (1753), subsp. *hybrida* (Ten.) Coutinho, Fl. Portugal: 495 (1913).

Judean Mts: Jerusalem, Givat Bet Hakerem, near Bet Hakerem. Dolomite outcrops, Veradim formation, Terra Rossa in karstic landscape, 35°11'30"E-31°46'00"N, 770 m. 24.03.1989, 13.043; Golan: near the ancient synagogue of Qazrin. Protogrammusol on basalt, 35°42'32"E-32°59'10"N. 350 m. 3.4.89, 44.026.

Anchusa undulata L. is a rather polymorphic species which occurs throughout the Mediterranean region. The plants from the Iberian Peninsula belong to three different subspecies (Valdés in Lagascalia 10: 104-110. 1981) which share with those of Morocco the same basic characters, mainly their stamens inserted at the top of the corolla tube and more or less overlapping the scales. The plants from Israel (13.043, 44.026) have stamens inserted at about the middle of the corolla tube and must not be considered as mere by synonymous with *A. undulata* in the strict sense as Feinbrun-Dothan (Fl. Palaest. 3: 82-83. 1978) does. They must be separated as subsp. *hybrida*. (Chater in Tutin & al., Fl. Eur.

3: 107. 1972, Chamberlain in Davis, Fl. Turkey 6: 392-393. 1978) rather than as a distinct species (Greuter & al., Med-Checklist 2: 72. 1984). B. VALDÉS

Asparagus horridus L., Syst. Veg. ed. 13: 274 (1774) [*A. stipularis* Forsskål]

Negev Highlands: Yamin-Rotem Plain, 10 km SSE of Dimona. Stable sand covering sandstone, 35°04'06"E-31°01'00"N. 330 m. 30.03.1989, 34.019; **Negev Highlands:** Makhtesh Hazera (Makhtesh Katan). Sandy alluvium, pebbly wadis and limestone outcrops, 35°13'00"E-30°57'30"N. (-)10 m. 30.03.1989, 35.019.

Many authors, including Dinsmore (in Post, Fl. Syria, ed. 2: 662. 1933), Valdés (Lagascalia 9: 72. 1979), and Feinbrun-Dothan (Fl. Palaest. 4: 101. 1986) have used the name *A. stipularis* Forsskål for a Mediterranean species of *Asparagus* with patent, strongly spiny cladodes solitary or in fascicles of 2-3. However, Lopez (Anales Jard. Bot. Madrid 42: 324. 1986) found that Linnaeus in 1774 had already named this plant *A. horridus* and this is the correct name for this species, which has been used, amongst others, by Valdés (Fl. Andalucia Occid. 3: 640. 1987) and Valdés & Talavera (Bocconeia 1: 66. 1991).

B. VALDÉS

Asperugo procumbens L., Sp. Pl.: 138 (1753)

Lower Jordan Valley: 2.5 km SSE of Pzael, 16 km N of Jericho. Deep alluvial salty soil, reserve of Salvadoria persica, 35°27'05"E-32°01'00"N, (-)280 m. 23.03.1989, 10.017;

Judean Mts: Jerusalem. near Ora. Terraces on marly-chalk with poor vegetation of *Coridothymetum capitati*, 35°09'E-31°45'15"N, 780 m. 24.03.1989, 12.034; **Negev Highlands:** Nahal Elot. Slopes, cliffs and wadis, 34°36'30"E-30°32'01"N. 920-980 m. 27.03.1989, 21.014.

Asperula arvensis L., Sp. Pl.: 103 (1753)

Samarian Desert: near Maále Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.043.

Asphodeline lutea (L.) Reichenb., Fl. Germ. Excurs.: 116 (1830)

Negev Highlands: Makhtesh Ramon, Karnei Ramon. Basalt outcrops and a few other substrata, 34°40'00"E-30°30'20"N. 770 m. 27.03.1989, 19.036.

Asphodelus fistulosus L., Sp. Pl.: 309 (1753)

Negev Highlands: Mizpe Ramon. Weeds in gardens and among houses, 34°29'00"E-30°35'20"N. 860 m. 27.03.1989, 18.017.

Asphodelus ramosus L., Sp. Pl.: 310 (1753) [*A. aestivus* auct.; *A. microcarpus* Salzm. & Viv.]

Judean Foothills: near Sedot Micha. Brown rendzina developing on nari crusts over Eocene chalk. Much of the area was burnt in summer 1988. *Ceratonia siliqua* - *Pistacia lentiscus* association, 34°54'43"E-31°43'25"N, 220 m. 21.03.1989, 02.098; **Philistine Plain:** 11 km S of Ashkelon. Sandy soil developed on Kurkar (calcareous sandstone). *Corydothymetum capitati*, 34°34'34"46"E-31°34'20"N, 70 m. 21.03.1989, 03.024; **Judean Desert:** near Mishor Adumim. Stony slopes with nari crusts on Senonian chalk. Brown lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis brachyodon*, 35°19'20"E-31°48'10"N, 250 m. 22.03.1989, 05.048; **Samarian Desert:** near Maále Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.086; **Judean Mts:** Jerusalem, Givat Bet Hakerem, near Bet Hakerem. Dolomite outcrops, Veradim formation, Terra Rossa in karstic landscape, 35°11'30"E-31°46'00"N, 770 m. 24.03.1989, 13.033; **Judean Mts:** Kiryat Anavim. 10 km W of Jerusalem. Limestone hill, Terra Rossa, a Pine forest that was burnt 08/1987, 35°07'51"E-31°48'50"N. 750 m. 24.03.1989, 14.002; **Northern Negev:** 5 km N of Beer Sheva. Brown loessial lithosol, *Noaeetum mucronatae*, 34°47'00"E-31°18'30"N. 300 m. 26.03.1989, 15.017; 15.037; **Northern Negev:** sands of Nahal Sekher, 15 km S of Beer Sheva. Loessial stable sandy soil, *Noaeetum mucronatae*, 34°49'20"E-31°06'00"N. 330 m. 26.03.1989, 16.021; **Negev Highlands:** 2 km NW of Yerokham. Smooth-faced limestone outcrops and wadis, 34°54'30"E-31°00'05"N. 330 m. 26.03.1989, 17.032; **Negev Highlands:** 6 km SW of Dimona. Sandy loess soil near the nature reserve of *Iris petrana*, 34°59'00"E-31°01'30"N. 330 m. 27.03.1989, 22.022; **Negev Highlands:** Above En Avdat. Hard Eocene chalk,

34°45'20"E-30°49'30"N. 500 m. 27.03.1989, 25.002; **Negev Highlands:** Yamin-Rotem Plain, 10 km SSE of Dimona. Stable sand covering sandstone, 35°04'06"E-31°01'00"N 330 m. 30.03.1989, 34.008; **Kinnrot Valley (Upper Jordan Valley):** 2 km NE of Kibbutz Haon. Steep limestone and sandstone slopes, 35°38'30"E-32°44'00"N. (-)150 m. 2.4.89, 39.078.

Dinsmore (in Post, Fl. Syria, ed. 2, 2: 655. 1933), Matthews (in Davis, Fl. Turkey 8: 85-86. 1984), and Feinbrun-Dothan (Fl. Palaest. 4: 21. 1986) erroneously considered *A. aestivus* Brot. as the perennial rhizomatose, flat leaved species of *Asphodelus* from the E. Mediterranean, which was recorded by Muschler (Man. Fl. Egypt 1: 22. 1912), Bouloumoy (Fl. Liban Syrie, 336: 1930), Eig & al. (Anal. Fl. Palestine: 356. 1948) and Taeckholm & Drar (Fl. Egypt 3: 41. 1954) as *A. microcarpus* Viv. *A. aestivus* Brot. is a species endemic to the Iberian Peninsula, which clearly differs from *A. ramosus* L. by several characters. The former exhibits a long and oblique or horizontal rhizome, covered by abundant fibres from the old leaves. The latter has a short and vertical or oblique rhizome without fibres. *A. aestivus* has a taller and more branched scape, and the capsules and seeds are smaller than those of *A. ramosus*. *A. aestivus* has to be excluded from the flora of Israel.

Z. DÍAZ LIFANTE & B. VALDÉS

Limestone hill, Terra Rossa, a Pine forest that was burnt 08/1987, 35°07'51" E-31°48'50" N. 750 m. 24.03.1989, 14.045.

Calligonum comosum L'Hér. in Trans. Linn. Soc. London 1: 180 (1791) [*C. polygonoides* subsp. *comosum* (L'Hér.) Soskov]

Negev Highlands: Yamin-Rotem Plain, 10 km SSE of Dimona. Stable sand covering sandstone, 35°04'06" E-31°01'00" N. 330 m. 30.03.1989, 34.015; **Negev Highlands:** Makhtesh Hazera (Makhtesh Katan). Sandy alluvium, pebbly wadis and limestone outcrops, 35°13'00" E-30°57'30" N. (-)10 m. 30.03.1989, 35.009.

Callipeltis aperta Boiss. & Buhse in Nouv. Mem. Soc. Imp. Naturalistes Moscou 12: 110 (1860)

Northern Negev: 5 km N of Beer Sheva. Brown loessial lithosol, *Noaeetum mucronatae*, 34°47'00" E-31°18'30" N. 300 m. 26.03.1989, 15.042.

Although this taxon has been considered by Ehrendorfer & Schönbeck-Temesy (in Davis Fl. Turkey 7: 850. 1982) as a "forma" of *C. cucullaria* (L.) Steven, it is better separated as a distinct species as accepted by Feinbrun-Dothan (Fl. Palaest. 3: 273. 1978). The bracteoles are flat instead of cucullate as in *C. cucullaria*, the pedicels are glabrous instead of puberulous, and flowers and fruits are smaller: corolla c. 0.5 mm and mericarps are not more than 1.4 mm, as in *C. aperta*, while in *C. cucullaria* the corolla is 0.5-0.7 mm and the mericarps vary from 1.4 to 2 mm. B. VALDÉS

Callipeltis cucullaria (L.) Steven in Mém. Soc. Imp. Naturalistes Moscou 7: 275 (1829)

Judean Desert: near Mishor Adumim. Stony slopes with nari crusts on Senonian chalk. Brown lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis brachyodon*, 35°19'20" E-31°48'10" N, 250 m. 22.03.1989, 05.062; **Southern Negev:** 8 km SE of Mizpe Ramon, Nahal Gevanim. Magmatic rocks (Nordmarkite), slopes, rock outcrops and wadi beds, 34°53'15" E-30°35'00" N. 520 m. 29.03.1989, 26.036.

Campanula camptoclada Boiss., Diagn. Pl. Orient. 11: 63 (1849)

Dead Sea Valley: near Mizpe Dragot, 15 km N of En Gedi. Slopes and small cliffs of dolomite and wadis, 35°19'20" E-31°35'15" N, (-) 350 m. 22.03.1989, 06.056.

Campanula erinus L., Sp. Pl.: 169 (1753)

Negev Highlands: 5 km SW of Yerokham. Loessial soil and near outcrops of smooth-faced limestone, $34^{\circ}53'40"E-31^{\circ}58'00"N$. 500 m. 27.03.1989, 23.008; **Bet-Shean Valley:** 6 km SSW of Bet-Shean. Slightly saline seepages with date palms and *Phragmites australis*, dark clayey soil, $35^{\circ}31'00"E-32^{\circ}27'30"N$. (-)200 m. 2.4.89, 38.014.

Campanula hierosolymitana Boiss., Diagn. Pl. Orient. 11: 62 (1849)

Kinnrot Valley (Upper Jordan Valley): 2 km NE of Kibbutz Haon. Steep limestone and sandstone slopes, $35^{\circ}38'30"E-32^{\circ}44'00"N$. (-)150 m. 2.4.89, 39.048.

Campanula stellaris Boiss., Diagn. Pl. Orient. 11: 63 (1849)

Kinnrot Valley (Upper Jordan Valley): 2 km NE of Kibbutz Haon. Steep limestone and sandstone slopes, $35^{\circ}38'30"E-32^{\circ}44'00"N$. (-)150 m. 2.4.89, 39.045.

Capparis aegyptia Lam., Encycl. 1: 605 (1785)

Dead Sea Valley: near Mizpe Dragot, 15 km N of En Gedi. Slopes and small cliffs of dolomite and wadis, $35^{\circ}19'20"E-31^{\circ}35'15"N$, (-) 350 m. 22.03.1989, 06.011; **Negev Highlands:** Makhtesh Hazera (Makhtesh Katan). Sandy alluvium, pebbly wadis and limestone outcrops, $35^{\circ}13'00"E-30^{\circ}57'30"N$. (-)10 m. 30.03.1989, 35.007.

Capsella bursa-pastoris (L.) Medicus, Pfl.-Gatt.: 85 (1792)

Golan: Odem Forest, near Masaáda. Shallow soil on basalt, $35^{\circ}45'15"E-33^{\circ}13'00"N$. 1010 m. 4.4.89, 48.009.

Cardamine hirsuta L., Sp. Pl.: 655 (1753)

Golan: Odem Forest, near Masaáda. Shallow soil on basalt, $35^{\circ}45'15"E-33^{\circ}13'00"N$. 1010 m. 4.4.89, 48.010.

Cardaria draba (L.) Desv. in J. Bot. Agric. 3: 163 (1815) [*Lepidium draba* L.]

Judean Desert: near Mishor Adumim. Stony slopes with nari crusts on Senonian chalk. Brown lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis brachyodon*, $35^{\circ}19'20"E-31^{\circ}48'10"N$, 250 m. 22.03.1989, 05.076; **Judean Mts:** Jerusalem, near Ora. Terraces on marly-chalk with poor vegetation of *Coridothymetum capitati*, $35^{\circ}09'00"E-31^{\circ}45'15"N$, 780 m. 24.03.1989, 12.017; **Negev Highlands:** 8 km SW of Yerokham. Loessial soil and stony slopes, $34^{\circ}53'10"E-30^{\circ}56'00"N$. 500 m. 27.03.1989, 24.018.

Carduus argentatus L., Mant. Pl.: 280 (1771)

Golan: near the ancient synagogue of Qazrin. Protogrumusol on basalt, 35°42'32"E-32°59'10"N. 350 m. 3.4.89, 44.032.

Carduus getulus Pomel, Nouv. Mat. Fl. Atlant. 2: 275 (1875)

Northern Negev: sands of Nahal Sekher, 15 km S of Beer Sheva. Loessial stable sandy soil, Noaeetum *mucronatae*, 34°49'20"E-31°06'00"N. 330 m. 26.03.1989, 16.018.

Carduus pycnocephalus L., Sp. Pl., ed. 2: 1151 (1763)

Philistine Plain: 1 km S of Ashdod. Stable sand dunes, 34°40'02"E-31°46'50"N, 20 m. 21.03.1989, 04.043; **Negev Highlands:** 2 km NW of Yerokham. Smooth-faced limestone outcrops and wadis, 34°54'30"E-31°00'05"N. 330 m. 26.03.1989, 17.040; **Bet-Shean Valley:** 6 km SSW of Bet-Shean. Slightly saline seepages with date palms and *Phragmites australis*, dark clayey soil, 35°31'00"E-32°27'30"N. (-)200 m. 2.4.89, 38.016.

The material collected in Israel (gatherings 04.043, 17.040 and 38.016) agree with *Carduus pycnocephalus* L. from the Iberian Peninsula rather than with *C. getulus* Pomel as defined in Davis, Fl. Turkey 5: 438 (1975). B. VALDÉS

Carex distans L., Syst. Nat., ed. 10: 1263 (1759)

Bet-Shean Valley: 6 km SSW of Bet-Shean. Slightly saline seepages with date palms and *Phragmites australis*, dark clayey soil, 35°31'00"E-32°27'30"N. (-)200 m. 2.4.89, 38.039.

Carex divisa Hudson, Fl. Angl.: 348 (1762)

Bet-Shean Valley: 6 km SSW of Bet-Shean. Slightly saline seepages with date palms and *Phragmites australis*, dark clayey soil, 35°31'00"E-32°27'30"N. (-)200 m. 2.4.89, 38.034; **Golan:** Nature Reserve (Bajuria). Grumusol and margins of a vernal pool, 35°39'30"E-32°54'30"N. 430 m. 3.4.89, 43.032; **Coastal Carmel:** Atlit, coastal sands, salt marsh margins, and hard calcareous sandstone (kurkar), 34°56'00"E-32°42'20"N. 2-20 m. 6.4.89, 58.032.

Carex hispida Willd. in Schkuhr, Beschr. Riedgräs. 1: 63, t. S f. 64 (1801)

Bet-Shean Valley: 6 km SSW of Bet-Shean. Slightly saline seepages with date palms and *Phragmites australis*, dark clayey soil, 35°31'00"E-32°27'30"N. (-)200 m. 2.4.89, 38.033.

Carex pachystylis J. Gay in Ann. Sci. Nat., Bot., ser. 2, 10: 301 (1838)

Negev Highlands: 2 km NW of Yerokham. Smooth-faced limestone outcrops and wadis, 34°54'30"E-31°00'05"N. 330 m. 26.03.1989, 17.004; **Negev Highlands:** Makhtesh Ramon, Karnei Ramon. Basalt outcrops and a few other substrata, 34°40'00"E-30°30'20"N. 770 m. 27.03.1989, 19.059.

Carrichtera annua (L.) DC. in Mém. Mus. Hist. Nat. 7: 250 (1821)

Philistinean Plain: 11 km S of Ashkelon. Sandy soil developed on Kurkar (calcareous sandstone). *Corydothymetum capitati*, 34°34'34"46"E-31°34'20"N, 70 m. 21.03.1989, 03.030; **Northern Negev:** sands of Nahal Sekher, 15 km S of Beer Sheva. Loessial stable sandy soil, *Noacetum mucronatae*, 34°49'20"E-31°06'00"N. 330 m. 26.03.1989, 16.011; **Negev Highlands:** 2 km NW of Yerokham. Smooth-faced limestone outcrops and wadis, 34°54'30"E-31°00'05"N. 330 m. 26.03.1989, 17.015; **Negev Highlands:** Nahal Elot. Slopes, cliffs and wadis, 34°36'30"E-30°32'01"N. 920-980 m. 27.03.1989, 21.057.

Catabrosa aquatica (L.) P. Beauv., Ess. Agrostogr.: 97, 157 (1812)

Golan: Nature Reserve (Bajuria). Grumusol and margins of a vernal pool, 35°39'30"E-32°54'30"N. 430 m. 3.4.89, 43.039.

Catananche lutea L., Sp. Pl.: 812 (1753)

Samarian Desert: near Ma'ale Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.076; **Judean Mts:** Kiryat Anavim. 10 km W of Jerusalem. Limestone hill, Terra Rossa, a Pine forest that was burnt 08/1987, 35°07'51"E-31°48'50"N. 750 m. 24.03.1989, 14.022; **Upper Galilee:** Near Ya'ara. Terra Rossa on hard limestone, maquis and clearings, 35°12'00"E-33°04'10"N. 200 m. 5.4.89, 53.006.

Catapodium marinum (L.) C. E. Hubb. in Kew Bull. 1954: 375 (1954) [*C. loliaceum* (Hudson) Link]

Coastal Galilee: coast of Rosh Hanikra. Hard calcareous sandstone (kurkar), gravels and sandy soil in the sea-spray zone, 35°05'07"E-33°05'30"N. 10 m. 5.4.89, 54.038.

Catapodium rigidum (L.) C. E. Hubb. in Dony, Fl. Bedfordshire: 427 (1953) [*Scleropoa rigida* (L.) Griseb.]

Philistinean Plain: 11 km S of Ashkelon. Sandy soil developed on Kurkar (calcareous sandstone). *Corydothymetum capitati*, 34°34'34"46"E-31°34'20"N, 70 m. 21.03.1989, 03.067; **Judean Desert:** near Mishor Adumim. Stony slopes with nari crusts on Senonian chalk. Brown lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis*

brachyodon, 35°19'20"E-31°48'10"N, 250 m. 22.03.1989, 05.101; **Kinnrot Valley (Upper Jordan Valley)**: near En Sheva (Tabkha). South-facing limestone slope, 35°32'20"E-32°52'20"N. (-)200 m. 3.4.89, 40.011; **Coastal Galilee**: coast of Rosh Haniqra. Hard calcareous sandstone (kurkar), gravels and sandy soil in the sea-spray zone, 35°05'07"E-33°05'30"N. 10 m. 5.4.89, 54.030.

***Caylusea hexagyna* (Forsskål) M. L. Green in Brit. Bot., Int. Bot. Congr. Cambridge 1930, Nomencl. Prop.: 102 (1929) [*C. canescens* (L.) Walpers]**

Negev Highlands: 2 km NW of Yerokham. Smooth-faced limestone outcrops and wadis, 34°54'30"E-31°00'05"N. 330 m. 26.03.1989, 17.009; **Southern Negev**: Nahal Paran junction with Ramon-Elat road. Pebby wadi beds, 35°56'20"E-30°20'15"N. 390 m. 29.03.1989, 27.033.

Mt. Hermon: near the tomb and oak reserve of Sheikh Othman, 1 km E of Qalaát Namrud, 35°43'50"E-33°15'00"N. 800 m. 4.4.89, 51.001.

Ceratocephala falcata (L.) Pers., Syn. Pl. 1: 341 (1805)

Northern Negev: 5 km N of Beer Sheva. Brown loessial lithosol, *Noaeetum mucronatae*, 34°47'00"E-31°18'30"N. 300 m. 26.03.1989, 15.062; **Negev Highlands:** Nahal Loz and Borot Loz (various habitats), 34°39'30"E-30°30'00"N. 960-1,000 m. 27.03.1989, 20.009; **Negev Highlands:** Nahal Elot. Slopes, cliffs and wadis, 34°36'30"E-30°32'01"N. 920-980 m. 27.03.1989, 21.007; **Negev Highlands:** Nahal Elot. Slopes, cliffs and wadis, 34°36'30"E-30°32'01"N. 920-980 m. 27.03.1989, 21.027; **Negev Highlands:** 6 km SW of Dimona. Sandy loess soil near the nature reserve of *Iris petrana*, 34°59'00"E-31°01'30"N. 330 m. 27.03.1989, 22.007; **Negev Highlands:** 8 km SW of Yerokham. Loessial soil and stony slopes, 34°53'10"E-30°56'00"N. 500 m. 27.03.1989, 24.038.

Cercis siliquastrum L., Sp. Pl.: 374 (1753)

Mt. Carmel: Upper Nahal Nesher, 2 km S of Nesher. Terra Rossa on hard limestone, 35°31'40"E-32°45'30"N. 280 m. 6.4.89, 57.007.

Chaetosciadium trichospermum (L.) Boiss., Fl. Orient. 2: 1078 (1872)

Judean Foothills: near Sedot Micha. Brown rendzina developing on nari crusts over Eocene chalk. Much of the area was burnt in summer 1988. *Ceratonia siliqua* - *Pistacia lentiscus* association, 34°54'43"E-31°43'25"N, 220 m. 21.03.1989, 02.065; **Judean Desert:** near Mishor Adumim. Stony slopes with nari crusts on Senonian chalk. Brown

lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis brachyodon*, 35°19'20"E-31°48'10"N, 250 m. 22.03.1989, 05.045, 05.092; Samarian Desert: near Ma'ale Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.069.

Cheilanthes acrostica (Balbis) Tod. in Giorn. Sci. Nat. Econ. Palermo 1: 215 (1866)
[*C. pteridioides* auct.; *C. fragrans* auct.]

Judean Mts: Jerusalem, near Ora. Terraces on marly-chalk with poor vegetation of *Coridothymetum capitati*, 35°09'E-31°45'15"N, 780 m. 24.03.1989, 12.024.

See Nardi & Reichstein (in *Webbia* 39: 135-139. 1985) for the confused nomenclature of this species.

Cheilanthes vellea (Aiton) F. Mueller, Fragm. 5: 123 (1866) [*C. catanensis* (Cosent.) H. P. Fuchs]

Dead Sea Valley: near Mizpe Dragot, 15 km N of En Gedi. Slopes and small cliffs of dolomite and wadis, 35°19'20"E-31°35'15"N, (-) 350 m. 22.03.1989, 06.033.

Chenopodium murale L., Sp. Pl.: 219 (1753)

Lower Jordan Valley: 1 km NE of Pzael, 18 km N of Jericho. Salty or leached calcareous soil, 35°27'30"E-32°03'20"N, (-)270 m. 23.03.1989, 09.041.

Chiliadenus iphionoides (Boiss. & Blanche) Brullo in *Webbia* 34: 301 (1980)
[*Varthemia iphionoides* Boiss. & Blanche]

Judean Foothills: near Sedot Micha. Brown rendzina developing on nari crusts over Eocene chalk. Much of the area was burnt in summer 1988. *Ceratonia siliqua* - *Pistacia lentiscus* association, 34°54'43"E-31°43'25"N, 220 m. 21.03.1989, 02.086.

Chlamydophora tridentata (Delile) Less., Syn. Gen. Compos.: 266 (1832)

Lower Jordan Valley: 2.5 km SSE of Pzael, 16 km N of Jericho. Deep alluvial salty soil, reserve of *Salvadora persica*, 35°27'05"E-32°01'00"N, (-)280 m. 23.03.1989, 10.001.

Chrysanthemum coronarium L., Sp. Pl.: 890 (1753)

Philistine Plain: 11 km S of Ashkelon. Sandy soil developed on Kurkar (calcareous sandstone). *Corydothymetum capitati*, 34°34'34"46"E-31°34'20"N, 70 m. 21.03.1989, 03.005.

Chrysanthemum myconis L., Sp. Pl., ed. 2: 1254 (1763)

Golan: Nature Reserve (Bajuria). Grumusol and margins of a vernal pool, 35°39'30"E-32°54'30"N. 430 m. 3.4.89, 43.042.

Cicer pinnatifidum Jaub. & Spach in Ann. Sci. Nat., Bot., ser. 2, 18: 227 (1842)

Judean Mts: Jerusalem, Givat Bet Hakerem, near Bet Hakerem. Dolomite outcrops, Veradim formation, Terra Rossa in karstic landscape, 35°11'30"E-31°46'00", 770 m. 24.03.1989, 13.018.

Cichorium pumilum Jacq., Obs. Bot. 4: 3, t. 80 (1771)

Kinnrot Valley (Upper Jordan Valley): near En Sheva (Tabkha). South-facing limestone slope, 35°32'20"E-32°52'20"N. (-)200 m. 3.4.89, 40.012.

Cistanche salsa (C. A. Meyer) G. Beck in Engler & Prantl, Nat. Pflanzenfam. 4 (3b): 129 (1893)

Southern Negev: 6 km S of Zihor junction. chalky ground in Eocene chalk hills, 35°01'00"E-30°16'30"N. 390 m. 29.03.1989, 28.018.

Cistanche tubulosa (Schenk) Hooker fil., Fl. Brit. India 4: 324 (1884) [*C. lutea* auct.]

Dead Sea Valley: near Ormat's solar ponds, 2 km N of the Dead Sea northern coast. Salty soil in wadis, 35°30'31"E-31°48'10"N, (-)370 m. 22.03.1989, 07.013; Negev Highlands: Makhtesh Hazera (Makhtesh Katan). Sandy alluvium. pebbly wadis and limestone outcrops, 35°13'00"E-30°57'30"N. (-)10 m. 30.03.1989, 35.008.

Cladium mariscus (L.) Pohl, Tent. Fl. Bohem. 1: 32 (1809)

Bet-Shean Valley: 6 km SSW of Bet-Shean. Slightly saline seepages with date palms and *Phragmites australis*, dark clayey soil, 35°31'00"E-32°27'30"N. (-)200 m. 2.4.89, 38.022.

Clematis cirrhosa L., Sp. Pl.: 544 (1753)

Judean Mts: Jerusalem, Givat Bet Hakerem, near Bet Hakerem. Dolomite outcrops, Veradim formation, Terra Rossa in karstic landscape, 35°11'30"E-31°46'00"N, 770 m. 24.03.1989, 13.036.

Cleome arabica L., Cent. Pl. 1: 20 (1755) [*C. trinervia* Fresen.]

Dead Sea Valley: near Mizpe Dragot, 15 km N of En Gedi. Slopes and small cliffs of dolomite and wadis, $35^{\circ}19'20"E-31^{\circ}35'15"N$, (-) 350 m. 22.03.1989, 06.003; **Southern Negev:** 8 km SE of Mizpe Ramon, Nahal Gevanim. Magmatic rocks (Nordmarkite), slopes, rock outcrops and wadi beds, $34^{\circ}53'15"E-30^{\circ}35'00"N$. 520 m. 29.03.1989, 26.015.

Clypeola jonthlaspi L., Sp. Pl.: 652 (1753)

Judean Foothills: near Sedot Micha. Brown rendzina developing on nari crusts over Eocene chalk. Much of the area was burnt in summer 1988. *Ceratonia siliqua* - *Pistacia lentiscus* association, $34^{\circ}54'43"E-31^{\circ}43'25"N$, 220 m. 21.03.1989, 02.032; **Negev Highlands:** Nahal Elot. Slopes, cliffs and wadis, $34^{\circ}36'30"E-30^{\circ}32'01"N$. 920-980 m. 27.03.1989, 21.032; **Kinnrot Valley (Upper Jordan Valley):** 2 km NE of Kibbutz Haon. Steep limestone and sandstone slopes, $35^{\circ}38'30"E-32^{\circ}44'00"N$. (-)150 m. 2.4.89, 39.032.

Cnicus benedictus L., Sp. Pl.: 826 (1753)

Judean Mts: Jerusalem, near Ora. Terraces on marly-chalk with poor vegetation of *Coridothymetum capitati*, $35^{\circ}09'00"E-31^{\circ}45'15"N$, 780 m. 24.03.1989, 12.031; **Northern Negev:** 5 km N of Beer Sheva. Brown loessial lithosol, *Noaeetum mucronatae*, $34^{\circ}47'00"E-31^{\circ}18'30"N$. 300 m. 26.03.1989, 15.016; **Negev Highlands:** 6 km SW of Dimona. Sandy loess soil near the nature reserve of *Iris petrana*, $34^{\circ}59'00"E-31^{\circ}01'30"N$. 330 m. 27.03.1989, 22.023.

Colchicum ritchii R. Br. in Denham & al., Narr. Travels Africa: 241 (1826)

Negev Highlands: 6 km SW of Dimona. Sandy loess soil near the nature reserve of *Iris petrana*, $34^{\circ}59'00"E-31^{\circ}01'30"N$. 330 m. 27.03.1989, 22.018.

Colchicum tunicatum Feinbrun, Palestine J. Bot., Jerusalem Ser., 6: 87, t. 2, f.11; t. 3, f. 2-3 (1953)

Negev Highlands: Makhtesh Ramon, Karnei Ramon. Basalt outcrops and a few other substrata, $34^{\circ}40'00"E-30^{\circ}30'20"N$. 770 m. 27.03.1989, 19.046; **Negev Highlands:** Nahal Elot. Slopes, cliffs and wadis, $34^{\circ}36'30"E-30^{\circ}32'01"N$. 920-980 m. 27.03.1989, 21.021.

Colutea istria Miller, Gard. Dict., ed. 8: *Colutea* n° 2 (1768)

Negev Highlands: Nahal Loz and Borot Loz (various habitats), $34^{\circ}39'30"E-30^{\circ}30'00"N$. 960-1,000 m. 27.03.1989, 20.003.

Convolvulus althaeoides L., Sp. Pl.: 156 (1753)

Negev Highlands: 2 km NW of Yerokham. Smooth-faced limestone outcrops and wadis, 34°54'30"E-31°00'05"N. 330 m. 26.03.1989, 17.042.

Convolvulus arvensis L., Sp. Pl.: 153 (1753)

Lower Jordan Valley: 2.5 km SSE of Pzael, 16 km N of Jericho. Deep alluvial salty soil, reserve of *Salvadora persica*, 35°27'05"E-32°01'00"N, (-)280 m. 23.03.1989, 10.006; **Kinnrot Valley (Upper Jordan Valley):** near En Sheva (Tabkha). South-facing limestone slope, 35°32'20"E-32°52'20"N. (-)200 m. 3.4.89, 40.003.

Convolvulus auricomus (A. Rich.) Bhandari in Bull Bot. Surv. India 6: 324 (1964)
[*C. glomeratus* Choisy (non Thunb.)]

Dead Sea Valley: near Mizpe Dragot, 15 km N of En Gedi. Slopes and small cliffs of dolomite and wadis, 35°19'20"E-31°35'15"N, (-) 350 m. 22.03.1989, 06.010.

Convolvulus coelesyriacus Boiss., Diagn. Pl. Orient. 11: 85 (1849)

Upper Galilee: Near Ya'ara. Terra Rossa on hard limestone, maquis and clearings, 35°12'00"E-33°04'10"N. 200 m. 5.4.89, 53.030.

Convolvulus pentapetaloides L., Syst. Nat., ed. 12, 3: 229 (1768)

Judean Desert: near Mishor Adumim. Stony slopes with nari crusts on Senonian chalk. Brown lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis brachyodon*, 35°19'20"E-31°48'10"N, 250 m. 22.03.1989, 05.067; **Judean Mts:** Kiryat Anavim, 10 km W of Jerusalem. Limestone hill, Terra Rossa, a Pine forest that was burnt 08/1987, 35°07'51"E-31°48'50"N. 750 m. 24.03.1989, 14.026; **Upper Galilee:** Near Ya'ara. Terra Rossa on hard limestone, maquis and clearings, 35°12'00"E-33°04'10"N. 200 m. 5.4.89, 53.020.

Convolvulus secundus Desr. in Lam., Encycl. 3: 553 (1792)

Coastal Carmel: Atlit, coastal sands, salt marsh margins, and hard calcareous sandstone (kurkar), 34°56'00"E-32°42'20"N. 2-20 m. 6.4.89, 58.004.

Convolvulus siculus L., Sp. Pl.: 156 (1753)

Philistine Plain: 11 km S of Ashkelon. Sandy soil developed on Kurkar (calcareous sandstone). *Corydthymetum capitati*, 34°34'34"46"E-31°34'20"N, 70 m. 21.03.1989,

03.051; Kinnrot Valley (Upper Jordan Valley): 2 km NE of Kibbutz Haon. Steep limestone and sandstone slopes, 35°38'30"E-32°44'00"N. (-)150 m. 2.4.89, 39.056; **Judean Mts:** Kiryat Anavim. 10 km W of Jerusalem. Limestone hill, Terra Rossa, a Pine forest that was burnt 08/1987, 35°07'51"E-31°48'50"N. 750 m. 24.03.1989, 14.053.

Convolvulus spicatus Hallier fil. in Bot. Jahrb. Syst. 18: 99 (1894)

Negev Highlands: Yamin-Rotem Plain, 10 km SSE of Dimona. Stable sand covering sandstone, 35°04'06"E-31°01'00"E. 330 m. 30.03.1989, 34.024.

***Conyza bonariensis* (L.) Cronquist, Bull. Torrey Bot. Club 70: 632 (1943) [*Erigeron crispus* Pourret]**

Judean Mts: Kiryat Anavim. 10 km W of Jerusalem. Limestone hill, Terra Rossa, a Pine forest that was burnt 08/1987, 35°07'51"E-31°48'50"N. 750 m. 24.03.1989, 14.027.

***Cornucopiae alopecuroides* L., Mant. Pl.: 29 (1767) [*C. involucratum* (Post) Mez]**

Golan: Nature Reserve (Bajuria). Grumusol and margins of a vernal pool, 35°39'30"E-32°54'30"N. 430 m. 3.4.89, 43.005.

***Coronilla repanda* (Poiret) Guss., Fl. Sicul. Syn. 2: 302 (1844)**

Philistinean Plain: 11 km S of Ashkelon. Sandy soil developed on Kurkar (calcareous sandstone). *Corydanthemum capitati*, 34°34'34"46"E-31°34'20"N, 70 m. 21.03.1989, 03.095.

***Coronilla rostrata* Boiss. & Spruner in Boiss. Diagn. Pl. Orient. 2: 100 (1843) [*C. parviflora* Willd. (non Moench)]**

Upper Galilee: Near Ya'ara. Terra Rossa on hard limestone, maquis and clearings, 35°12'00"E-33°04'10"N. 200 m. 5.4.89, 53.044.

***Coronilla scorpioides* (L.) Koch, Syn. Fl. Germ. Helv.: 188 (1835)**

Judean Foothills: near Sedot Micha. Brown rendzina developing on nari crusts over Eocene chalk. Much of the area was burnt in summer 1988. *Ceratonia siliqua* - *Pistacia lentiscus* association, 34°54'43"E-31°43'25"N, 220 m. 21.03.1989, 02.053; **Samarian Desert:** near Ma'ale Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.023.

Coronopus squamatus (Forsskål) Ascherson, Fl. Prov. Brandenburg 1: 62 (1860)

Golan: Nature Reserve (Bajuria). Grumusol and margins of a vernal pool, 35°39'30"E-32°54'30"N. 430 m. 3.4.89, 43.019.

Corydalis triternata Zucc. in Abh. Math.-Phys. Cl. Königl. Bayer. Akad. Wiss. 3: 251 (1843) [*C. solida* auct.]

Mt. Hermon: lower teliferique. Slopes of hard karstic Jurassic limestones, 35°46'20"E-33°17'30"N. 1690 m. 4.4.89, 49.004.

Corynephorus articulatus (Desf.) P. Beauv., Ess. Agrostogr.: 90, 159 (1812) [*C. divaricatus* auct.]

Philistine Plain: 11 km S of Ashkelon. Sandy soil developed on Kurkar (calcareous sandstone). *Corydohymetum capitati*, 34°34'34"46"E-31°34'20"N, 70 m. 21.03.1989, 03.072; Negev Highlands: Yamin-Rotem Plain, 10 km SSE of Dimona. Stable sand covering sandstone, 35°04'06"E-31°01'00"N. 330 m. 30.03.1989, 34.018.

See Kerguélen (in Lejeunia, ser. 2, 110: 42. 1983) for an overview of the nomenclatural controversy surrounding this species.

Crambe hispanica L., Sp. Pl.: 671 (1753)

Golan: near the ancient synagogue of Qazrin. Protogrumusol on basalt, 35°42'32"E-32°59'10"N. 350 m. 3.4.89, 44.013.

Crassula alata (Viv.) A. Berger in Engler & Prantl, Nat. Pflanzenfam., ed. 2, 18a: 389 (1930) [incl. *Tillaea mucosa* L.]

Philistine Plain: 1 km S of Ashdod. Stable sand dunes, 34°40'02"E-31°46'50"N, 20 m. 21.03.1989, 04.037; Northern Negev: 5 km N of Beer Sheva. Brown loessial lithosol, *Noaeetum mucronatae*, 34°47'00"E-31°18'30"N. 300 m. 26.03.1989, 15.022; Coastal Carmel: Atlit, coastal sands, salt marsh margins, and hard calcareous sandstone (kurkar), 34°56'00"E-32°42'20"N. 2-20 m. 6.4.89, 58.019.

This species should not be separated from *C. tillaea* Lester-Garland at specific level. *C. alata* has pedicellate flowers, while in *C. tillaea* they are sessile, and the sepals are slightly wider in *C. alata* than in *C. tillaea*. *C. tillaea* should better be treated as a variety of *C. alata*.

B. VALDÉS

Crataegus aronia (L.) DC., Prodr. 2: 629 (1825) [*C. azarolus* L.]

Judean Mts: Jerusalem, near Ora. Terraces on marly-chalk with poor vegetation of *Coridothymetum capitati*, 35°09'00"E-31°45'15"N, 780 m. 24.03.1989, 12.013.

Judean Desert: near Mishor Adumim. Stony slopes with nari crusts on Senonian chalk. Brown lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis brachyodon*, $35^{\circ}19'20"E-31^{\circ}48'10"N$, 250 m. 22.03.1989, 05.044.

Erodium botrys (Cav.) Bertol., Amoen. Ital.: 35 (1819)

Kinnrot Valley (Upper Jordan Valley): 2 km NE of Kibbutz Haon. Steep limestone and sandstone slopes, $35^{\circ}38'30"E-32^{\circ}44'00"N$. (-) 150 m. 2.4.89, 39.012.

Erodium ciconium (L.) L'Hér. in Aiton, Hort. Kew. 2: 414 (1789)

Negev Highlands: Nahal Elot. Slopes, cliffs and wadis, $34^{\circ}36'30"E-30^{\circ}32'01"N$. 920-980 m. 27.03.1989, 21.058; **Negev Highlands:** 6 km SW of Dimona. Sandy loess soil near the nature reserve of *Iris petrana*, $34^{\circ}59'00"E-31^{\circ}01'30"N$. 330 m. 27.03.1989, 22.001.

In the Mediterranean region the mericarps of *Erodium ciconium* var. *ciconium* have glandular pits (see Davis, Fl. Turkey 2: 479. 1967; Webb & Chater, Fl. Eur. 2: 201. 1968; Guittoneau, Boissiera 20: 93. 1972; Zohary, Fl. Palaest. 2: 237. 1972) as is seen in the plants collected near Dimona, (n° 22.001). The plants collected near Nahal Elot (n°. 21.058) have, however, eglandular pits; otherwise, they agree with *E. ciconium* var. *ciconium*.

B. VALDÉS

***Erodium cicutarium* (L.) L'Hér.** in Aiton, Hort. Kew. 2: 414 (1789)

Samarian Desert: near Ma'ale Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.042.

***Erodium crassifolium* L'Hér.** in Aiton, Hort. Kew. 2: 414 (1789) [*E. hirtum* Willd.]

Dead Sea Valley: near Ormat's solar ponds, 2 km N of the Dead Sea northern coast. Salty soil in wadis, 35°30'31"E-31°48'10"N, (-)370 m. 22.03.1989, 07.003; **Negev Highlands:** Makhtesh Ramon, Karnei Ramon. Basalt outcrops and a few other substrata, 34°40'00"E-30°30'20"N. 770 m. 27.03.1989, 19.040; **Negev Highlands:** Nahal Elot. Slopes, cliffs and wadis, 34°36'30"E-30°32'01"N. 920-980 m. 27.03.1989, 21.046; **Negev Highlands:** 6 km SW of Dimona. Sandy loess soil near the nature reserve of *Iris petrana*, 34°59'00"E-31°01'30"N. 330 m. 27.03.1989, 22.034; **Southern Negev:** 8 km SE of Mizpe Ramon, Nahal Gevanim. Magmatic rocks (Nordmarkite), slopes, rock outcrops and wadi beds, 34°53'15"E-30°35'00"N. 520 m. 29.03.1989, 26.053; **Southern Negev:** Near Kibbutz Shizafon. Wadis in gravel plain, 35°02'05"E-30°03'00"N. 430 m. 29.03.1989, 29.007.

***Erodium glaucophyllum* (L.) L'Hér.** in Aiton, Hort. Kew. 2: 416 (1789)

Southern Negev: 8 km SE of Mizpe Ramon, Nahal Gevanim. Magmatic rocks (Nordmarkite), slopes, rock outcrops and wadi beds, 34°53'15"E-30°35'00"N. 520 m. 29.03.1989, 26.006; **Southern Negev:** Nahal Paran junction with Ramon-Elat road. Pebby wadi beds, 35°56'20"E-30°20'15"N. 390 m. 29.03.1989, 27.007.

***Erodium gruinum* (L.) L'Hér.** in Aiton, Hort. Kew. 2: 415 (1789)

Judean Desert: near Mishor Adumim. Stony slopes with nari crusts on Senonian chalk. Brown lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis brachyodon*, 35°19'20"E-31°48'10"N, 250 m. 22.03.1989, 05.023; **Judean Mts:** Jerusalem, Givat Bet Hakerem, near Bet Hakerem. Dolomite outcrops, Veradim formation, Terra Rossa in karstic landscape, 35°11'30"E-31°46'00"N, 770 m. 24.03.1989, 13.003.

***Erodium laciniatum* (Cav.) Willd., Sp. Pl. 3: 633 (1800)**

Northern Negev: sands of Nahal Sekher, 15 km S of Beer Sheva. Loessial stable sandy soil, Noaeetum *mucronatae*, 34°49'20"E-31°06'00"N. 330 m. 26.03.1989, 16.006; **Philistine Plain:** 11 km S of Ashkelon. Sandy soil developed on Kurkar (calcareous sandstone). *Corydothymetum capitati*, 34°34'34"46"E-31°34'20"N, 70 m. 21.03.1989, 03.066; **Southern Negev:** Nahal Paran junction with Ramon-Elat road. Pebby wadi beds, 35°56'20"E-30°20'15"N. 390 m. 29.03.1989, 27.008.

Erodium malacoides (L.) L'Hér. in Aiton, Hort. Kew. 2: 415 (1879)

Judean Desert: near Mishor Adumim. Stony slopes with nari crusts on Senonian chalk. Brown lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis brachyodon*, 35°19'20"E-31°48'10"N, 250 m. 22.03.1989, 05.026; **Kinnrot Valley (Upper Jordan Valley):** near En Sheva (Tabkha). South-facing limestone slope, 35°32'20"E-32°52'20"N. (-) 200 m. 34.89, 40.002.

Erodium moschatum (L.) L'Hér. in Aiton, Hort. Kew. 2: 414 (1789)

Judean Desert: near Mishor Adumim. Stony slopes with nari crusts on Senonian chalk. Brown lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis brachyodon*, 35°19'20"E-31°48'10"N, 250 m. 22.03.1989, 05.027.

Erodium oxyrhynchum MB., Fl. Taur.-Caucas. 2: 133 (1808), subsp. *bryoniifolium* (Boiss.) Schönb.-Tem. in Rech. fil., Fl. Iran. 69: 43 (1970) [*E. bryoniifolium* Boiss.]

Negev Highlands: Nahal Elot. Slopes, cliffs and wadis, 34°36'30"E-30°32'01"N. 920-980 m. 27.03.1989, 21.047; **Southern Negev:** 8 km SE of Mizpe Ramon, Nahal Gevanim. Magmatic rocks (Nordmarkite), slopes, rock outcrops and wadi beds, 34°53'15"E-30°35'00"N. 520 m. 29.03.1989, 26.001; **Negev Highlands:** Yamin-Rotem Plain, 10 km SSE of Dimona. Stable sand covering sandstone, 35°04'06"E-31°01'00"N. 330 m. 30.03.1989, 34.023.

Erodium telavivense Eig in Beih. Bot. Centralbl. 50 (2): 233 (1932)

Coastal Carmel: Atlit, coastal sands, salt marsh margins, and hard calcareous sandstone (kurkar), 34°56'00"E-32°42'20"N. 2-20 m. 6.4.89, 58.040.

Erodium touchyanum Delile in Mém. Acad. Sci. Montpellier, Sect. Méd. 1: 423 (1853) [*E. deserti* (Eig) Eig]

Negev Highlands: Nahal Elot. Slopes, cliffs and wadis, 34°36'30"E-30°32'01"N. 920-980 m. 27.03.1989, 21.043.

Erophila minima C. A. Meyer, Verz. Pfl. Casp. Meer.: 184 (1831)

Judean Mts: Jerusalem, Givat Bet Hakerem, near Bet Hakerem. Dolomite outcrops, Veradim formation, Terra Rossa in karstic landscape, 35°11'30"E-31°46'00"N, 770 m. 24.03.1989, 13.016; **Negev Highlands:** Nahal Elot. Slopes, cliffs and wadis, 34°36'30"E-30°32'01"N. 920-980 m. 27.03.1989, 21.008.

Erophila praecox (Steven) DC., Syst. Nat. 2: 357 (1821) [*E. verna* auct.]

Judean Foothills: near Sedot Micha. Brown rendzina developing on nari crusts over Eocene chalk. Much of the area was burnt in summer 1988. *Ceratonia siliqua* - *Pistacia lentiscus* association, 34°54'43"E-31°43'25"N, 220 m. 21.03.1989, 02.034; Judean Mts: Kiryat Anavim, 10 km W of Jerusalem. Limestone hill, Terra Rossa, a Pine forest that was burnt 08/1987, 35°07'51"E-31°48'50"N. 750 m. 24.03.1989, 14.034.

Erophila verna (L.) Chevall., Fl. Gén. Env. Paris 2: 898 (1827)

Golan: Odem Forest, near Masaáda. Shallow soil on basalt, 35°45'15"E-33°13'00"N. 1010 m. 4.4.89, 48.008.

Eruca sativa Miller, Gard. Dict., ed. 8: *Eruca* n° 1 (1768), subsp. *longirostris* (Uechtr.) Jahandiez & Maire, Cat. Pl. Maroc: 279 (1932)

Kinnrot Valley (Upper Jordan Valley): 2 km NE of Kibbutz Haon. Steep limestone and sandstone slopes, 35°38'30"E-32°44'00"N. (-)150 m. 2.4.89, 39.034; Lower Jordan Valley: 1 km NE of Pzael, 18 km N of Jericho. Salty or leached calcareous soil, 35°27'30"E-32°03'20"N, (-)270 m. 23.03.1989, 09.003.

Erucaria hispanica (L.) Druce in Bot. Exch. Club Soc. Brit. Isles 3: 418 (1914)

Philistine Plain: 11 km S of Ashkelon. Sandy soil developed on Kurkar (calcareous sandstone). *Corydanthymetum capitati*, 34°34'34"46"E-31°34'20"N, 70 m. 21.03.1989, 03.032.

Erucaria microcarpa Boiss., Diagn. Pl. Orient. 8: 47 (1849) [*Reboudia pinnata* auct.]

Northern Negev: 5 km N of Beer Sheva. Brown loessial lithosol, *Noaeetum mucronatae*, 34°47'00"E-31°18'30"N. 300 m. 26.03.1989, 15.036; Northern Negev: sands of Nahal Sekher, 15 km S of Beer Sheva. Loessial stable sandy soil, *Noaeetum mucronatae*, 34°49'20"E-31°06'00"N. 330 m. 26.03.1989, 16.015; Negev Highlands: 6 km SW of Dimona. Sandy loess soil near the nature reserve of *Iris petrana*, 34°59'00"E-31°01'30"N. 330 m. 27.03.1989, 22.045.

Erucaria pinnata (Viv.) Täckh. & Boulos in Publ. Cairo Univ. Herb. 5: 37 (1974) [*E. uncata* (Boiss.) Ascherson & Schweinf.]

Negev Highlands: Yamin-Rotem Plain, 10 km SSE of Dimona. Stable sand covering sandstone, 35°04'06"E-31°01'00"N. 330 m. 30.03.1989, 34.012.

***Erucaria rostrata* (Boiss.) Greuter & Burdet in Willdenowia 15: 419 (1986) [*E. boveana* Cosson]**

Judean Desert: near Mishor Adumim. Stony slopes with nari crusts on Senonian chalk. Brown lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis brachyodon*, 35°19'20"E-31°48'10"N, 250 m. 22.03.1989, 05.074; **Dead Sea Valley:** near Mizpe Dragot, 15 km N of En Gedi. Slopes and small cliffs of dolomite and wadis, 35°19'20"E-31°35'15"N, (-) 350 m. 22.03.1989, 06.031; **Lower Jordan Valley:** 1 km NE of Pzael, 18 km N of Jericho. Salty or leached calcareous soil, 35°27'30"E-32°03'20"N, (-)270 m. 23.03.1989, 09.004; **Northern Negev:** sands of Nahal Sekher, 15 km S of Beer Sheva. Loessial stable sandy soil, Noaeetum *mucronatae*, 34°49'20"E-31°06'00"N. 330 m. 26.03.1989, 16.014; **Negev Highlands:** 6 km SW of Dimona. Sandy loess soil near the nature reserve of *Iris petrana*, 34°59'00"E-31°01'30"N. 330 m. 27.03.1989, 22.046; **Negev Highlands:** Makhtesh Hazera (Makhtesh Katan). Sandy alluvium, pebbly wadis and limestone outcrops, 35°13'00"E-30°57'30"N. (-)10 m. 30.03.1989, 35.031.

***Eryngium creticum* Lam., Encycl. 4: 754 (1798)**

Kinnrot Valley (Upper Jordan Valley): near En Sheva (Tabkha). South-facing limestone slope, 35°32'20"E-32°52'20"N. (-)200 m. 3.4.89, 40.026.

***Eryngium glomeratum* Lam., Encycl. 4: 755 (1798)**

Negev Highlands: 2 km NW of Yerokham. Smooth-faced limestone outcrops and wadis, 34°54'30"E-31°00'05"N. 330 m. 26.03.1989, 17.047.

***Eryngium maritimum* L., Sp. Pl.: 223 (1753)**

Coastal Carmel: Atlit, coastal sands, salt marsh margins, and hard calcareous sandstone (kurkar), 34°56'00"E-32°42'20"N. 2-20 m. 6.4.89, 58.002.

***Euphorbia arguta* Banks & Solander in Russell, Nat. Hist. Aleppo, ed. 2, 2: 253 (1794)**

Fagonia mollis Delile, Descr. Egyptes Hist. Nat.: 62, 220 (1813)

Dead Sea Valley: near Mizpe Dragot, 15 km N of En Gedi. Slopes and small cliffs of dolomite and wadis, 35°19'20"E-31°35'15"N, (-) 350 m. 22.03.1989, 06.006; **Southern Negev:** 8 km SE of Mizpe Ramon, Nahal Gevanim. Magmatic rocks (Nordmarkite), slopes, rock outcrops and wadi beds, 34°53'15"E-30°35'00"N. 520 m. 29.03.1989, 26.007.

Fagonia sinaica Boiss., Diagn. Pl. Orient. 1: 61 (1843)

Southern Negev: 8 km SE of Mizpe Ramon, Nahal Gevanim. Magmatic rocks (Nordmarkite), slopes, rock outcrops and wadi beds, 34°53'15"E-30°35'00"N. 520 m. 29.03.1989, 26.009.

Farsetia aegyptia Turra, Farsetia Nov. Gen.: 3 (1765)

Southern Negev: 8 km SE of Mizpe Ramon, Nahal Gevanim. Magmatic rocks (Nordmarkite), slopes, rock outcrops and wadi beds, 34°53'15"E-30°35'00"N. 520 m. 29.03.1989, 26.012.

Ferula communis L., Sp. Pl.: 246 (1753)

Kinnrot Valley (Upper Jordan Valley): 2 km NE of Kibbutz Haon. Steep limestone and sandstone slopes, 35°38'30"E-32°44'00"N. (-)150 m. 2.4.89, 39.063.

Ferula daninii Zohary, Fl. Palaest. 2: 439 (1972)

Negev Highlands: Makhtesh Ramon, Karnei Ramon. Basalt outcrops and a few other substrata, 34°40'00"E-30°30'20"N. 770 m. 27.03.1989, 19.001.

Fibigia clypeata (L.) Medicus, Pfl.-Gatt.: 90 (1792)

Judean Mts: Jerusalem, Givat Bet Hakerem, near Bet Hakerem. Dolomite outcrops, Veradim formation, Terra Rossa in karstic landscape, 35°11'30"E-31°46'00"N, 770 m.

24.03.1989, 13.027; **Golan**: Har Shipon. Volcanic ash, 35°45'50"E-33°04'17"N. 740 m. 4.4.89, 46.027; **Mt. Hermon**: lower teliferique. Slopes of hard karstic Jurassic limestones, 35°46'20"E-33°17'30"N. 1690 m. 4.4.89, 49.012.

Filago contracta (Boiss.) Chrtek & Holub in Preslia 53: 3 (1963) [*Evax contracta* Boiss.]

Judean Desert: near Mishor Adumim. Stony slopes with nari crusts on Senonian chalk. Brown lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis brachyodon*, 35°19'20"E-31°48'10"N, 250 m. 22.03.1989, 05.058; **Samarian Desert**: near Maále Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.079; **Northern Negev**: 5 km N of Beer Sheva. Brown loessial lithosol, *Noaeetum mucronatae*, 34°47'00"E-31°18'30"N. 300 m. 26.03.1989, 15.040.

Filago desertorum Pomel, Nouv. Mat. Fl. Atlant. 1: 46 (1874)

Dead Sea Valley: near Mizpe Dragot, 15 km N of En Gedi. Slopes and small cliffs of dolomite and wadis, 35°19'20"E-31°35'15"N, (-) 350 m. 22.03.1989, 06.042; **Northern Negev**: 5 km N of Beer Sheva. Brown loessial lithosol, *Noaeetum mucronatae*, 34°47'00"E-31°18'30"N. 300 m. 26.03.1989, 15.039; **Northern Negev**: sands of Nahal Sekher, 15 km S of Beer Sheva. Loessial stable sandy soil, *Noaeetum mucronatae*, 34°49'20"E-31°06'00"N. 330 m. 26.03.1989, 16.022; **Negev Highlands**: Makhtesh Ramon, Karnei Ramon. Basalt outcrops and a few other substrata, 34°40'00"E-30°30'20"N. 770 m. 27.03.1989, 19.006; **Southern Negev**: 8 km SE of Mizpe Ramon, Nahal Gevanim. Magmatic rocks (Nordmarkite), slopes, rock outcrops and wadi beds, 34°53'15"E-30°35'00"N. 520 m. 29.03.1989, 26.045.

Filago eriocephala Guss., Pl. Rar.: 344, t. 59 (1826) [*F. germanica* auct.]

Philistine Plain: 11 km S of Ashkelon. Sandy soil developed on Kurkar (calcareous sandstone). *Corydothymetum capitati*, 34°34'34"46"E-31°34'20"N, 70 m. 21.03.1989, 03.015; **Upper Galilee**: Near Ya'ara. Terra Rossa on hard limestone, maquis and clearings, 35°12'00"E-33°04'10"N. 200 m. 5.4.89, 53.025.

Filago palaestina (Boiss.) Chrtek & Holub in Preslia 35: 3 (1963) [*Evax palaestina* Boiss.]

Judean Foothills: near Sedot Micha. Brown rendzina developing on nari crusts over Eocene chalk. Much of the area was burnt in summer 1988. *Ceratonia siliqua* - *Pistacia lentiscus* association, 34°54'43"E-31°43'25"N, 220 m. 21.03.1989, 02.079; **Samarian Desert**: near Maále Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.081; **Kinnrot Valley (Upper Jordan Valley)**: 2 km NE of Kibbutz Haon. Steep limestone and sandstone slopes, 35°38'30"E-32°44'00"N. (-)150 m. 2.4.89, 39.061.

***Filago pyramidata* L., Sp. Pl.: 1199 (1753) [*F. spathulata* C. Presl]**

Samarian Desert: near Ma'ale Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, $35^{\circ}05'30"E-31^{\circ}52'50"N$, 250 m. 23.03.1989, 08.082; **Judean Mts:** Kiryat Anavim. 10 km W of Jerusalem. Limestone hill, Terra Rossa, a Pine forest that was burnt 08/1987, $35^{\circ}07'51"E-31^{\circ}48'50"N$. 750 m. 24.03.1989, 14.020; **Negev Highlands:** 2 km NW of Yerokham. Geranium tuberosum L., Sp. Pl.: 680 (1753)

Samarian Desert: near Maále Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.034; Mt. Hermon: near the tomb and oak reserve of Sheikh Othman, 1 km E of Qalaát Namrud, 35°43'50"E-33°15'00"N. 800 m. 4.4.89, 51.011.

Geropogon hybridus (L.) Schultz-Bip. in Webb & Berth., Vis. Nat. Iles Canaries 3(2,2): 472 (1850)

Judean Desert: near Mishor Adumim. Stony slopes with nari crusts on Senonian chalk. Brown lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis brachyodon*, 35°19'20"E-31°48'10"N, 250 m. 22.03.1989, 05.059; Kinnrot Valley (Upper Jordan Valley): near En Sheva (Tabkha). South-facing limestone slope, 35°32'20"E-32°52'20"N. (-)200 m. 3.4.89, 40.023.

Gladiolus atroviolaceus Boiss., Diagn. Pl. Orient. 13: 14 (1854) [*G. aleppicus* Boiss.]

Judean Desert: near Mishor Adumim. Stony slopes with nari crusts on Senonian chalk. Brown lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis brachyodon*, 35°19'20"E-31°48'10"N, 250 m. 22.03.1989, 05.009; Samarian Desert: near Maále Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.090.

Gladiolus italicus Miller, Gard. Dict., ed. 8: *Gladiolus* n° 2 (1768) [*G. segetum* Ker-Gawler]

Samarian Desert: near Maále Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.095.

Glaucium grandiflorum Boiss. & Huet in Boiss., Diagn. Pl. Orient., ser. 2, 5: 15 (1856)

Judean Desert: near Mishor Adumim. Stony slopes with nari crusts on Senonian chalk. Brown lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis brachyodon*, 35°19'20"E-31°48'10"N, 250 m. 22.03.1989, 05.047.

Globularia arabica Jaub. & Spach, Ill. Pl. Orient. 3: 76 (1848)

Negev Highlands: 2 km NW of Yerokham. Smooth-faced limestone outcrops and wadis, 34°54'30"E-31°00'05"N. 330 m. 26.03.1989, 17.044; **Negev Highlands:** 5 km SW of Yerokham. Loessial soil and near outcrops of smooth-faced limestone, 34°53'40"E-31°58'00"N. 500 m. 27.03.1989, 23.009.

Grewia villosa Willd. in Ges. Naturf. Freunde Berlin, Neue Schriften 4: 205 (1803)

Dead Sea Valley: near Mizpe Dragot, 15 km N of En Gedi. Slopes and small cliffs of dolomite and wadis, 35°19'20"E-31°35'15"N, (-) 350 m. 22.03.1989, 06.022.

Gundelia tournefortii L., Sp. Pl.: 814 (1753)

Northern Negev: 5 km N of Beer Sheva. Brown loessial lithosol, *Noaeetum mucronatae*, 34°47'00"E-31°18'30"N. 300 m. 26.03.1989, 15.018.

Gymnarrhena micrantha Desf. in Mém. Mus. Hist. Nat. 4: 1, t. 4 (1818)

Dead Sea Valley: near Mizpe Dragot, 15 km N of En Gedi. Slopes and small cliffs of dolomite and wadis, 35°19'20"E-31°35'15"N, (-) 350 m. 22.03.1989, 06.047; **Dead Sea Valley:** near Ormat's solar ponds, 2 km N of the Dead Sea northern coast. Salty soil in wadis, 35°30'31"E-31°48'10"N, (-)370 m. 22.03.1989, 07.006; **Northern Negev:** 5 km N of Beer Sheva. Brown loessial lithosol, *Noaeetum mucronatae*, 34°47'00"E-31°18'30"N. 300 m. 26.03.1989, 15.027; **Negev Highlands:** Makhtesh Ramon, Karnei Ramon. Basalt outcrops and a few other substrata, 34°40'00"E-30°30'20"N. 770 m. 27.03.1989, 19.004.

Gymnocarpos decander Forsskål, Fl. Aegypt.-Arab.: 65 (1775) [*G. fruticosum* (Vahl) Pers.]

Dead Sea Valley: near Mizpe Dragot, 15 km N of En Gedi. Slopes and small cliffs of dolomite and wadis, 35°19'20"E-31°35'15"N, (-) 350 m. 22.03.1989, 06.071; **Negev Highlands:** 2 km NW of Yerokham. Smooth-faced limestone outcrops and wadis, 34°54'30"E-31°00'05"N. 330 m. 26.03.1989, 17.043.

***Gynandriris sisyrinchium* (L.) Parl., Nouv. Gen. Sp. Monocot.: 49 (1854)**

Judean Foothills: near Sedot Micha. Brown rendzina developing on nari crusts over Eocene chalk. Much of the area was burnt in summer 1988. *Ceratonia siliqua* - *Pistacia lentiscus* association, 34°54'43"E-31°43'25"N, 220 m. 21.03.1989, 02.091; **Philisteian Plain:** 11 km S of Ashkelon. Sandy soil developed on kurkar (calcareous sandstone). *Corydothymetum capitati*, 34°34'34"46"E-31°34'20"N, 70 m. 21.03.1989, 03.075; **Samarian Desert:** near Ma'ale Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.092; **Judean Mts:** Jerusalem, near Ora. Terraces on marly-chalk with poor vegetation of *Coridothymetum capitati*, 35°09'00"E-31°45'15"N, 780 m. 24.03.1989, 12.044; **Judean Mts:** Jerusalem, Givat Bet Hakerem, near Bet Hakerem. Hammada scoparia (Pomel) Il'in in Bot. Zurn. (Moskva & Leningrad) 33: 583 (1948)
 [*Haloxylon articulatum* (Cav.) Bunge]

Negev Highlands: 8 km SW of Yerokham. Loessial soil and stony slopes, 34°53'10"E-30°56'00"N. 500 m. 27.03.1989, 24.002.

Haplophyllum buxbaumii (Poiret) G. Don fil., Genist. 1: 780 (1831)

Bet-Shean Valley: 6 km SSW of Bet-Shean. Slightly saline seepages with date palms and *Phragmites australis*, dark clayey soil, 35°31'00"E-32°27'30"N. (-)200 m. 2.4.89, 38.040; **Kinnrot Valley (Upper Jordan Valley):** 2 km NE of Kibbutz Haon. Steep limestone and sandstone slopes, 35°38'30"E-32°44'00"N. (-)150 m. 2.4.89, 39.014.

Haplophyllum poorei C. Towns., Kew Bull. 20: 97, f. 3 (1966)

Negev Highlands: Nahal Elot. Slopes, cliffs and wadis, 34°36'30"E-30°32'01"N. 920-980 m. 27.03.1989, 21.061.

Haplophyllum tuberculatum (Forsskål) Adr. Juss. in Mém. Mus. Hist. Nat. 12: 528 (1825) [*H. longifolium* Boiss.]

Southern Negev: Nahal Paran junction with Ramon-Elat road. Pebbly wadi beds, 35°56'20"E-30°20'15"N. 390 m. 29.03.1989, 27.021.

Hedypnois rhagadioloides (L.) F. W. Schmidt in Samml. Phys.-Ökon. Aufsätze 1: 279 (1795) [*H. cretica* (L.) Dum.-Courset]

Judean Desert: near Mishor Adumim. Stony slopes with nari crusts on Senonian chalk. Brown lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis brachyodon*, 35°19'20"E-31°48'10"N, 250 m. 22.03.1989, 05.021; **Negev Highlands:** 6 km SW of Dimona. Sandy loess soil near the nature reserve of *Iris petrana*, 34°59'00"E-31°01'30"N. 330 m. 27.03.1989, 22.036; **Kinnrot Valley (Upper Jordan Valley):** 2 km NE of Kibbutz Haon. Steep limestone and sandstone slopes, 35°38'30"E-32°44'00"N. (-)150 m. 2.4.89, 39.055; **Kinnrot Valley (Upper Jordan Valley):** near En Sheva (Tabkha). South-facing limestone slope, 35°32'20"E-32°52'20"N. (-)200 m. 3.4.89, 40.017; 40.018; **Upper Galilee:** Near Ya'ara. Terra Rossa on hard limestone, maquis and clearings, 35°12'00"E-33°04'10"N. 200 m. 5.4.89, 53.047; **Coastal Galilee:** coast of Rosh Haniqra. Hard calcareous sandstone (kurkar), gravels and sandy soil in the sea-spray zone, 35°05'07"E-33°05'30"N. 10 m. 5.4.89, 54.009; **Coastal Carmel:** Atlit, coastal

sands, salt marsh margins, and hard calcareous sandstone (kurkar), 34°56'00"E-32°42'20"N. 2-20 m. 6.4.89, 58.026; **Northern Negev**: 5 km N of Beer Sheva. Brown loessial lithosol, *Noaeetum mucronatae*, 34°47'00"E-31°18'30"N. 300 m. 26.03.1989, 15.012; 15.013; **Lower Jordan Valley**: 1 km NE of Pzael, 18 km N of Jericho. Salty or leached calcareous soil, 35°27'30"E-32°03'20"N, (-)270 m. 23.03.1989, 09.018; **Samarian Desert**: near Ma'ale Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.075; **Mt. Carmel**: Upper Nahal Nesher, 2 km S of Nesher. Terra Rossa on hard limestone, 35°31'40"E-32°45'30"N. 280 m. 6.4.89, 57.011; **Upper Galilee**: Near Ya'ara. Terra Rossa on hard limestone, maquis and clearings, 35°12'00"E-33°04'10"N. 200 m. 5.4.89, 53.045.

In the Berlin set, the collections 08.075, 39.055, 40.018, 53.045 and 57.011 consist of plants with apically strongly swollen peduncles which are not constricted below the involucre. They correspond to *H. rhagadioloides* subsp. *tubaeformis* (Ten.) Hayek as keyed out in Rechinger (Fl. Aeg.: 678. 1943) based on Hayek (Prodr. Fl. Penins. Balcan. 2: 807. 1931). The plants no. 05.021, 09.018, 15.012, 22.036, 40.017 and 58.026 exhibit moderately incrassate peduncles, clearly constricted below the capitula, and accordingly represent *H. rhagadioloides* subsp. *rhagadioloides* (= subsp. *cretica* (L.) Hayek). Plants with thin, elongated, unswollen peduncles (known as *H. rhagadioloides* subsp. *monspeliensis* (Willd.) Hayek) could not be traced in the material of Iter Mediterraneum II. *Hedypnois* is, according to Nordenstam (in Bot. Notiser 124: 489. 1971), "a case, where taxonomic revision, exclusively based on herbarium material, would be a highly precarious undertaking". For the purpose of this list we therefore adopt the view of the latter author "to lump the whole material in one heap" as is done in most current floras.

T. RAUS

***Helichrysum sanguineum* (L.) Kostel., Allg. Med.-Pharm. Fl.: 709 (1833)**

Judean Mts: Kiryat Anavim. 10 km W of Jerusalem. Limestone hill, Terra Rossa, a Pine forest that was burnt 08/1987, 35°07'51"E-31°48'50"N. 750 m. 24.03.1989, 14.018; **Judean Foothills:** near Sedot Micha. Brown rendzina developing on nari crusts over Eocene chalk. Much of the area was burnt in summer 1988. *Ceratonia siliqua* - *Pistacia lentiscus* association, 34°54'43"E-31°43'25"N, 220 m. 21.03.1989, 02.004.

Heliotropium arbainense Fresen. in Mus. Senckenberg. 1: 168 (1833)

Southern Negev: 8 km SE of Mizpe Ramon, Nahal Gevanim. Magmatic rocks (Nordmarkite), slopes, rock outcrops and wadi beds, 34°53'15"E-30°35'00"N. 520 m. 29.03.1989, 26.017.

Heliotropium maris-mortui Zohary in Palestine J. Bot., Jerusalem Ser., 2: 177 (1941)

Dead Sea Valley: near Mizpe Dragot, 15 km N of En Gedi. Slopes and small cliffs of dolomite and wadis, 35°19'20"E-31°35'15"N, (-) 350 m. 22.03.1989, 06.023.

Heliotropium rotundifolium Lehm., Icon. Descr. Nov. Stirp.: 19 (1821)

Kinnrot Valley (Upper Jordan Valley): near En Sheva (Tabkha). South-facing limestone slope, 35°32'20"E-32°52'20"N. (-)200 m. 3.4.89, 40.009.

Herniaria hemistemon J. Gay in Rev. Bot. Recueil Mens. 2: 371 (1847)

Northern Negev: 5 km N of Beer Sheva. Brown loessial lithosol, *Noaeetum mucronatae*, 34°47'00"E-31°18'30"N. 300 m. 26.03.1989, 15.058; **Northern Negev:** sands of Nahal Sekher, 15 km S of Beer Sheva. Loessial stable sandy soil, *Noaeetum mucronatae*, 34°49'20"E-31°06'00"N. 330 m. 26.03.1989, 16.003; **Negev Highlands:** Mizpe Ramon. Weeds in gardens and among houses, 34°29'00"E-30°35'20"N. 860 m. 27.03.1989, 18.014; **Negev Highlands:** Makhtesh Hazera (Makhtesh Katan). Sandy alluvium, pebbly wadis and limestone outcrops, 35°13'00"E-30°57'30"N. (-)10 m. 30.03.1989, 35.030.

Herniaria hirsuta L., Sp. Pl.: 218 (1753)

Northern Negev: 5 km N of Beer Sheva. Brown loessial lithosol, *Noaeetum mucronatae*, 34°47'00"E-31°18'30"N. 300 m. 26.03.1989, 15.056; **Negev Highlands:** Mizpe Ramon. Weeds in gardens and among houses, 34°29'00"E-30°35'20"N. 860 m. 27.03.1989, 18.013; **Negev Highlands:** 8 km SW of Yerokham. Loessial soil and stony slopes, 34°53'10"E-30°56'00"N. 500 m. 27.03.1989, 24.008; **Coastal Carmel:** Atlit, coastal sands, salt marsh margins, and hard calcareous sandstone (kurkar), 34°56'00"E-32°42'20"N. 2-20 m. 6.4.89, 58.001.

Hippocratea areolata Desv. in Mém. Soc. Linn. Paris 4: 329 (1826) [*H. bicontorta* Loisel.]

Northern Negev: sands of Nahal Sekher, 15 km S of Beer Sheva. Loessial stable sandy soil, *Noaeetum mucronatae*, 34°49'20"E-31°06'00"N. 330 m. 26.03.1989, 16.036; **Negev Highlands:** Makhtesh Hazera (Makhtesh Katan). Sandy alluvium, pebbly wadis and limestone outcrops, 35°13'00"E-30°57'30"N. (-)10 m. 30.03.1989, 35.016.

Hippocratea multisiliquosa L., Sp. Pl.: 744 (1753)

Philistinean Plain: 11 km S of Ashkelon. Sandy soil developed on kurkar (calcareous sandstone). *Corydothymetum capitati*, 34°34'34"46"E-31°34'20"N, 70 m. 21.03.1989, 03.091; **Coastal Carmel:** Atlit, coastal sands, salt marsh margins, and hard calcareous sandstone (kurkar), 34°56'00"E-32°42'20"N. 2-20 m. 6.4.89, 58.044.

Hippocratea unisiliquosa L., Sp. Pl.: 744 (1753)

Judean Foothills: near Sedot Micha. Brown rendzina developing on nari crusts over Eocene chalk. Much of the area was burnt in summer 1988. *Ceratonia siliqua* - *Pistacia lentiscus* association, 34°54'43"E-31°43'25"N, 220 m. 21.03.1989, 02.044; **Philistinean Plain:** 11 km S of Ashkelon. Sandy soil developed on kurkar (calcareous sandstone). *Corydothymetum capitati*, 34°34'34"46"E-31°34'20"N, 70 m. 21.03.1989, 03.092; **Dead Sea Valley:** near Mizpe Dragot, 15 km N of En Gedi. Slopes and small cliffs of dolomite and wadis, 35°19'20"E-31°35'15"N, (-) 350 m. 22.03.1989, 06.034; **Samarian Desert:** near Ma'ale Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.009; **Judean Mts:** Kiryat Anavim. 10 km W of Jerusalem. Deep alluvial salty soil, reserve of *Salvadora persica*, 35°27'05"E-32°01'00"N, (-)280 m. 23.03.1989, 10.020; **Northern Negev:** 5 km N of Beer Sheva. Brown loessial lithosol, *Noaeetum mucronatae*, 34°47'00"E-31°18'30"N. 300 m. 26.03.1989, 15.049; **Negev Highlands:** Makhtesh Ramon, Karnei Ramon. Basalt outcrops and a few other substrata, 34°40'00"E-30°30'20"N. 770 m. 27.03.1989, 19.053.

***Hordeum spontaneum* C. Koch in Linnaea 21: 430 (1848)**

Judean Desert: near Mishor Adumim. Stony slopes with nari crusts on Senonian chalk. Brown lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis brachyodon*,

35°19'20"E-31°48'10"N, 250 m. 22.03.1989, 05.098; **Samarian Desert**: near Maále Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.054; **Negev Highlands**: Nahal Elot. Slopes, cliffs and wadis, 34°36'30"E-30°32'01"N. 920-980 m. 27.03.1989, 21.012; **Negev Highlands**: 8 km SW of Yerokham. Loessial soil and stony slopes, 34°53'10"E-30°56'00"N. 500 m. 27.03.1989, 24.035; **Southern Negev**: Nahal Paran junction with Ramon-Elat road. Pebbly wadi beds, 35°56'20"E-30°20'15"N. 390 m. 29.03.1989, 27.022; **Negev Highlands**: Makhtesh Hathira, Nahal Hathira. Sandy-silty wadi, 35°01'00"E-30°57'03"N. 310 m. 30.03.1989, 33.003; **Bet-Shean Valley**: 6 km SSW of Bet-Shean. Slightly saline seepages with date palms and *Phragmites australis*, dark clayey soil, 35°31'00"E-32°27'30"N. (-)200 m. 2.4.89, 38.029; **Kinnrot Valley (Upper Jordan Valley)**: 2 km NE of Kibbutz Haon. Steep limestone and sandstone slopes, 35°38'30"E-32°44'00"N. (-)150 m. 2.4.89, 39.021.

Hormuzakia aggregata (Lehm.) Gusuleaç in *Publ. Soc. Nat. România* 6: 8 (1923)
[*Anchusa aggregata* Lehm.]

Philisteian Plain: 11 km S of Ashkelon. Sandy soil developed on kurkar (calcareous sandstone). *Corydothymetum capitati*, 34°34'34"46"E-31°34'20"N, 70 m. 21.03.1989, 03.047; **Philisteian Plain**: 1 km S of Ashdod. Stable sand dunes, 34°40'02"E-31°46'50"N, 20 m. 21.03.1989, 04.023; **Coastal Carmel**: Atlit, coastal sands, salt marsh margins, and hard calcareous sandstone (kurkar), 34°56'00"E-32°42'20"N. 2-20 m. 6.4.89, 58.029.

The very characteristic fruits clearly do not allow this taxon to be included in the genus *Anchusa*, as was done by Greuter & al. (Med-Checklist 1: 69. 1984). Pollen grains of this species have 6-7 equatorial apertures (M. I. Díez, pers. comm.), which do not occur in any *Anchusa* species.

B. VALDÉS

Hymenocarpos circinnatus (L.) Savi, Fl. Pis. 2: 205 (1798)

Judean Foothills: near Sedot Micha. Brown rendzina developing on nari crusts over Eocene chalk. Much of the area was burnt in summer 1988. *Ceratonia siliqua* - *Pistacia lentiscus* association, 34°54'43"E-31°43'25"N, 220 m. 21.03.1989, 02.050; **Philisteian Plain**: 11 km S of Ashkelon. Sandy soil developed on kurkar (calcareous sandstone). *Corydothymetum capitati*, 34°34'34"46"E-31°34'20"N, 70 m. 21.03.1989, 03.086; **Judean Desert**: near Mishor Adumim. Stony slopes with nari crusts on Senonian chalk. Brown lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis brachyodon*, 35°19'20"E-31°48'10"N, 250 m. 22.03.1989, 05.077; **Samarian Desert**: near Maále Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.022; **Judean Mts**: Jerusalem, Givat Bet Hakerem, near Bet Hakerem. Dolomite outcrops, Veradim formation, Terra Rossa in karstic landscape, 35°11'30"E-31°46'00"N, 770 m. 24.03.1989, 13.053; **Golan**: near the ancient synagogue of Qazrin. Protogramusol on basalt, 35°42'32"E-32°59'10"N. 350 m. 3.4.89, 44.028.

***Hymenolobus procumbens* (L.) Nutt., Fl. N. Amer. 1: 117 (1838)**

Lower Jordan Valley: 2.5 km SSE of Pzael, 16 km N of Jericho. Deep alluvial salty soil, reserve of *Salvadora persica*, 35°27'05"E-32°01'00"N, (-)280 m. 23.03.1989, 10.002; **Bet-Shean Valley:** 6 km SSW of Bet-Shean. Pebbly wadi beds, 35°56'20"E-30°20'15"N. 390 m. 29.03.1989, 27.039; **Southern Negev:** Near Kibbutz Shizafon. Wadis in gravel plain, 35°02'05"E-30°03'00"N. 430 m. 29.03.1989, 29.009.

Kickxia spartoides (Buch) Janchen in Österr. Bot. Z. 82: 152 (1933) [*Linaria macilenta* auct.]

Southern Negev: 8 km SE of Mizpe Ramon, Nahal Gevanim. Magmatic rocks (Nordmarkite), slopes, rock outcrops and wadi beds, 34°53'15"E-30°35'00"N. 520 m. 29.03.1989, 26.037; **Southern Negev:** Nahal Paran junction with Ramon-Elat road. Pebby wadi beds, 35°56'20"E-30°20'15"N. 390 m. 29.03.1989, 27.012.

Koelpinia linearis Pallas, Reise Russ. Reich. 3: 755 (1776)

Northern Negev: 5 km N of Beer Sheva. Brown loessial lithosol, *Noaeetum mucronatae*, 34°47'00"E-31°18'30"N. 300 m. 26.03.1989, 15.005.

Lagoecia cuminoides L., Sp. Pl.: 203 (1753)

Judean Foothills: near Sedot Micha. Brown rendzina developing on nari crusts over Eocene chalk. Much of the area was burnt in summer 1988. *Ceratonia siliqua* - *Pistacia lentiscus* association, 34°54'43"E-31°43'25"N, 220 m. 21.03.1989, 02.071; **Judean Desert:** near Mishor Adumim. Stony slopes with nari crusts on Senonian chalk. Brown lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis brachyodon*, 35°19'20"E-31°48'10"N, 250 m. 22.03.1989, 05.064; 05.094; **Golan:** 5 km E of Almagor. Pseudosavanna of *Ziziphus spina-christi* accompanied by annuals; protogrumusol on basalt, 35°39'30"E-32°54'30"N. (-)40 m. 3.4.89, 42.005.

Lagurus ovatus L., Sp. Pl.: 81 (1753)

Philistine Plain: 1 km S of Ashdod. Stable sand dunes, 34°40'02"E-31°46'50"N, 20 m. 21.03.1989, 04.017; **Coastal Carmel:** Atlit, coastal sands, salt marsh margins, and hard calcareous sandstone (kurkar), 34°56'00"E-32°42'20"N. 2-20 m. 6.4.89, 58.039.

Lamarckia aurea (L.) Moench, Methodus: 201 (1794)

Judean Desert: near Mishor Adumim. Stony slopes with nari crusts on Senonian chalk. Brown lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis brachyodon*, 35°19'20"E-31°48'10"N, 250 m. 22.03.1989, 05.007; **Dead Sea Valley:** near Ormat's solar ponds, 2 km N of the Dead Sea northern coast. Salty soil in wadis, 35°30'31"E-31°48'10"N, (-)370 m. 22.03.1989, 07.009; **Lower Jordan Valley:** 1 km NE of Pzael, 18 km N of Jericho. Salty or leached calcareous soil, 35°27'30"E-32°03'20"N, (-)270 m. 23.03.1989, 09.035; **Judean Mts:** Kiryat Anavim. 10 km W of Jerusalem. Limestone hill, Terra Rossa, a Pine forest that was burnt 08/1987, 35°07'51"E-31°48'50"N. 750 m. 24.03.1989, 14.010; **Negev Highlands:** Nahal Elot. Slopes, cliffs and wadis, 34°36'30"E-30°32'01"N. 920-980 m. 27.03.1989, 21.024.

Lamium amplexicaule L., Sp. Pl.: 579 (1753)

Philistine Plain: 1 km S of Ashdod. Stable sand dunes, 34°40'02"E-31°46'50"N, 20 m. 21.03.1989, 04.048; **Judean Mts:** Jerusalem, near Ora. Terraces on marly-chalk with poor vegetation of *Coridothymetum capitati*, 35°09'00"E-31°45'15"N, 780 m. 24.03.1989, 12.038; **Negev Highlands:** Nahal Elot. Slopes, cliffs and wadis, 34°36'30"E-30°32'01"N. 920-980 m. 27.03.1989, 21.010.

Lamium garganicum L., Sp. Pl., ed. 2: 808 (1763), subsp. *striatum* (Sm.) Hayek in Repert. Spec. Nov. Regni Veg. Beih. 30(2): 275 (1929) [*L. striatum* Sm.]

Mt. Hermon: lower teliérique. Slopes of hard karstic Jurassic limestones, 35°46'20"E-33°17'30"N. 1690 m. 4.4.89, 49.007.

Lamium moschatum Miller, Gard. Dict., ed. 8: *Lamium* n° 4 (1768)

Golan: near the ancient synagogue of Qazrin. Protogrumusol on basalt, 35°42'32"E-32°59'10"N. 350 m. 3.4.89, 44.031; **Golan:** Har Shipon. Volcanic ash, 35°45'50"E-33°04'17"N. 740 m. 4.4.89, 46.018.

Lappula spinocarpos (Forsskål) Ascherson in Verh. Bot. Vereins Prov. Brandenburg 16, Sitzungsber.: 88 (1874) [*Sclerocaryopsis spinocarpos* (Forsskål) Brand]

Negev Highlands: 2 km NW of Yerokham. Smooth-faced limestone outcrops and wadis, 34°54'30"E-31°00'05"N. 330 m. 26.03.1989, 17.006; **Negev Highlands:** Makhtesh Ramon, Karnei Ramon. Basalt outcrops and a few other substrata, 34°40'00"E-30°30'20"N. 770 m. 27.03.1989, 19.060; **Negev Highlands:** Nahal Elot. Slopes, cliffs and wadis, 34°36'30"E-30°32'01"N. 920-980 m. 27.03.1989, 21.049; **Negev Highlands:** 6 km SW of Dimona. Sandy loess soil near the nature reserve of *Iris petrana*, 34°59'00"E-31°01'30"N. 330 m. 27.03.1989, 22.010; **Southern Negev:** 6 km S of Zihor junction. chalky ground in Eocene chalk hills, 35°01'00"E-30°16'30"N. 390 m. 29.03.1989, 28.011; **Southern Negev:** Near Kibbutz Shizafon. Wadis in gravel plain, 35°02'05"E-30°03'00"N. 430 m. 29.03.1989, 29.005.

Lasiopogon muscoides (Desf.) DC., Prodr. 6: 246 (1838)

Negev Highlands: Makhtesh Ramon, Karnei Ramon. Basalt outcrops and a few other substrata, 34°40'00"E-30°30'20"N. 770 m. 27.03.1989, 19.007; **Southern Negev:** Nahal Paran junction with Ramon-Elat road. Pebbly wadi beds, 35°56'20"E-30°20'15"N. 390 m. 29.03.1989, 27.019.

Lathyrus aphaca L., Sp. Pl.: 729 (1753)

Philistine Plain: 1 km S of Ashdod. Stable sand dunes, 34°40'02"E-31°46'50"N, 20 m. 21.03.1989, 04.034; **Judean Desert:** near Mishor Adumim. Stony slopes with nari

crusts on Senonian chalk. Brown lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis brachyodon*, 35°19'20"E-31°48'10"N, 250 m. 22.03.1989, 05.070.

Lathyrus blepharicarpus Boiss., Diagn. Pl. Orient. 9: 126 (1849)

Judean Mts: Jerusalem, Givat Bet Hakerem, near Bet Hakerem. Dolomite outcrops, Veradim formation, Terra Rossa in karstic landscape, 35°11'30"E-31°46'00"N, 770 m. 24.03.1989, 13.052; **Mt. Hermon:** near the tomb and oak reserve of Sheikh Othman, 1 km E of Qalaát Namrud, 35°43'50"E-33°15'00"N. 800 m. 4.4.89, 51.021.

Lathyrus ciliolatus Rech. fil. in Ark. Bot., ser. 2, 1: 311 (1950)

Judean Desert: near Mishor Adumim. Stony slopes with nari crusts on Senonian chalk. Brown lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis brachyodon*, 35°19'20"E-31°48'10"N, 250 m. 22.03.1989, 05.082; **Samarian Desert:** near Maále Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.024; **Golan:** Har Shipon. Volcanic ash, 35°45'50"E-33°04'17"N. 740 m. 4.4.89, 46.003.

Lathyrus gorgoni Parl. in Giorn. Sci. Sicilia 62: 3 (1838)

Samarian Desert: near Maále Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.008; **Golan:** near the ancient synagogue of Qazrin. Protogrumusol on basalt, 35°42'32"E-32°59'10"N. 350 m. 3.4.89, 44.010.

Lathyrus hierosolymitanus Boiss., Diagn. Pl. Orient. 9: 127 (1849)

Judean Foothills: near Sedot Micha. Brown rendzina developing on nari crusts over Eocene chalk. Much of the area was burnt in summer 1988. *Ceratonia siliqua* - *Pistacia lentiscus* association, 34°54'43"E-31°43'25"N, 220 m. 21.03.1989, 02.042; **Philistine Plain:** 1 km S of Ashdod. ***Malva parviflora* L., Demonstr. Pl.: 18 (1753)**

Judean Desert: near Mishor Adumim. Stony slopes with nari crusts on Senonian chalk. Brown lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis brachyodon*, 35°19'20"E-31°48'10"N, 250 m. 22.03.1989, 05.040; **Bet-Shean Valley:** 6 km SSW of

Bet-Shean. Slightly saline seapages with date palms and *Phragmites australis*, dark clayey soil, 35°31'00"E-32°27'30"N. (-)200 m. 2.4.89, 38.026.

Malva sylvestris L., Sp. Pl.: 689 (1753)

Negev Highlands: Mizpe Ramon. Weeds in gardens and among houses, 34°29'00"E-30°35'20"N. 860 m. 27.03.1989, 18.007; **Negev Highlands:** 8 km SW of Yerokham. Loessial soil and stony slopes, 34°53'10"E-30°56'00"N. 500 m. 27.03.1989, 24.001.

Malvella sherardiana (L.) Jaub. & Spach, Ill. Pl. Orient. 5: 47, t. 444 (1855)

Samarian Desert: near Maále Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.027.

Mandragora autumnalis Bertol., Elench. Pl. Hort. Bot. Bonon. 6 (1820) [*M. officinarum* auct.]

Mt. Carmel: Upper Nahal Nesher, 2 km S of Nesher. Terra Rossa on hard limestone, 35°31'40"E-32°45'30"N. 280 m. 6.4.89, 57.014.

Maresia pulchella (DC.) O. E. Schulz in Engler, Pflanzenr. 86: 211 (1924)
[*Malcolmia pulchella* (DC.) Boiss.]

Philisteian Plain: 1 km S of Ashdod. Stable sand dunes, 34°40'02"E-31°46'50"N, 20 m. 21.03.1989, 04.005; **Philisteian Plain:** 11 km S of Ashkelon. Sandy soil developed on kurkar (calcareous sandstone). *Corydothymetum capitati*, 34°34'34"E-31°34'20"N, 70 m. 21.03.1989, 03.029.

The three species of *Maresia* growing in Israel are confined to sandy soils. We did not follow Greuter & al. (Med-Checklist 1: 139. 1984) in including *Maresia pulchella* in the genus *Malcolmia*.
A. DANIN

Matricaria aurea (Loefl.) Schultz Bip. in Bonplandia 8: 369 (1860)

Negev Highlands: 2 km NW of Yerokham. Smooth-faced limestone outcrops and wadis, 34°54'30"E-31°00'05"N. 330 m. 26.03.1989, 17.038; **Negev Highlands:** 6 km SW of Dimona. Sandy loess soil near the nature reserve of *Iris petrana*, 34°59'00"E-31°01'30"N. 330 m. 27.03.1989, 22.040.

Matthiola aspera Boiss., Diagn. Pl. Orient. 8: 16 (1849)

Dead Sea Valley: near Ormat's solar ponds, 2 km N of the Dead Sea northern coast. Salty soil in wadis, 35°30'31"E-31°48'10"N, (-)370 m. 22.03.1989, 07.008; **Lower Jordan Valley:** 1 km NE of Pzael, 18 km N of Jericho. Salty or leached calcareous soil, 35°27'30"E-32°03'20"N, (-)270 m. 23.03.1989, 09.005.

Matthiola livida (Delile) DC., Syst. Nat. 2: 174 (1821) [*M. longipetala* subsp. *livida* (Delile) Maire]

Dead Sea Valley: near Mizpe Dragot, 15 km N of En Gedi. Slopes and small cliffs of dolomite and wadis, 35°19'20"E-31°35'15"N, (-) 350 m. 22.03.1989, 06.026; **Northern Negev:** sands of Nahal Sekher, 15 km S of Beer Sheva. Loessial stable sandy soil, *Noaeetum mucronatae*, 34°49'20"E-31°06'00"N. 330 m. 26.03.1989, 16.052; **Negev Highlands:** 2 km NW of Yerokham. Smooth-faced limestone outcrops and wadis, 34°54'30"E-31°00'05"N. 330 m. 26.03.1989, 17.017; **Negev Highlands:** 6 km SW of Dimona. Sandy loess soil near the nature reserve of *Iris petrana*, 34°59'00"E-31°01'30"N. 330 m. 27.03.1989, 22.039; **Negev Highlands:** 8 km SW of Yerokham. Loessial soil and stony slopes, 34°53'10"E-30°56'00"N. 500 m. 27.03.1989, 24.003; **Southern Negev:** 6 km S of Zihor junction. chalky ground in Eocene chalk hills, 35°01'00"E-30°16'30"N. 390 m. 29.03.1989, 28.012; **Negev Highlands:** Makhtesh Hazera (Makhtesh Katan). Sandy alluvium, pebbly wadis and limestone outcrops, 35°13'00"E-30°57'30"N. (-)10 m. 30.03.1989, 35.032.

Matthiola tricuspidata (L.) R. Br. in Aiton, Hort. Kew., ed. 2, 4: 120 (1812)

Coastal Galilee: coast of Rosh Hanikra. Hard calcareous sandstone (kurkar), gravels and sandy soil in the sea-spray zone, 35°05'07"E-33°05'30"N. 10 m. 5.4.89, 54.022.

Medicago blancheana Boiss., Diagn. Pl. Orient., ser. 2, 5: 75 (1856)

Golan: near the ancient synagogue of Qazrin. Protogrumusol on basalt, 35°42'32"E-32°59'10"N. 350 m. 3.4.89, 44.002; 44.018; **Golan:** Yahudiya forest. Park forest of *Quercus ithaburensis* on basalt, 35°40'30"E-32°55'25"N. 40-50 m. 3.4.89, 45.005.

Medicago coronata (L.) Bartal., Cat. Piante Siena: 61 (1776)

Judean Foothills: near Sedot Micha. Brown rendzina developing on nari crusts over Eocene chalk. Much of the area was burnt in summer 1988. *Ceratonia siliqua* - *Pistacia lentiscus* association, 34°54'43"E-31°43'25"N, 220 m. 21.03.1989, 02.055; **Samarian Desert:** near Ma'ale Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.016; **Judean Mts:** Kiryat Anavim. 10 km W of Jerusalem. Limestone hill, Terra Rossa, a Pine forest that was burnt 08/1987, 35°07'51"E-31°48'50"N. 750 m. 24.03.1989, 14.044; **Kinnrot Valley (Upper Jordan Valley):** 2 km NE of Kibbutz Haon. Steep limestone and sandstone slopes, 35°38'30"E-32°44'00"N. (-)150 m. 2.4.89, 39.074; **Kinnrot**

Valley (Upper Jordan Valley): near En Sheva (Tabkha). South-facing limestone slope, $35^{\circ}32'20"E$ - $32^{\circ}52'20"N$. (-)200 m. 3.4.89, 40.020.

Medicago granadensis Willd., Enum. Pl. Hort. Berol.: 803 (1809)

Golan: near the ancient synagogue of Qazrin. Protogrumusol on basalt, $35^{\circ}42'32"E$ - $32^{\circ}59'10"N$. 350 m. 3.4.89, 44.007, 44.036.

***Medicago laciniata* (L.) Miller, Gard. Dict., ed. 8: *Medicago* n° 5 (1768)**

Dead Sea Valley: near Mizpe Dragot, 15 km N of En Gedi. Slopes and small cliffs of dolomite and wadis, $35^{\circ}19'20"E$ - $31^{\circ}35'15"N$, (-) 350 m. 22.03.1989, 06.030; **Lower Jordan Valley:** 1 km NE of Pzael, 18 km N of Jericho. Salty or leached calcareous soil, $35^{\circ}27'30"E$ - $32^{\circ}03'20"N$, (-)270 m. 23.03.1989, 09.030; **Negev Highlands:** 6 km SW of Dimona. Sandy loess soil near the nature reserve of *Iris petrana*, $34^{\circ}59'00"E$ - $31^{\circ}01'30"N$. 330 m. 27.03.1989, 22.028; **Negev Highlands:** 8 km SW of Yerokham. Loessial soil and stony slopes, $34^{\circ}53'10"E$ - $30^{\circ}56'00"N$. 500 m. 27.03.1989, 24.011.

Medicago littoralis Loisel., Not. Pl. France: 118 (1810)

Philistine Plain: 11 km S of Ashkelon. Sandy soil developed on kurkar (calcareous sandstone). *Corydothymetum capitati*, $34^{\circ}34'34"46"E$ - $31^{\circ}34'20"N$, 70 m. 21.03.1989, 03.089; **Coastal Galilee:** coast of Rosh Haniqra. Hard calcareous sandstone (kurkar), gravels and sandy soil in the sea-spray zone, $35^{\circ}05'07"E$ - $33^{\circ}05'30"N$. 10 m. 5.4.89, 54.019.

Medicago marina L., Sp. Pl.: 779 (1753)

Coastal Galilee: coast of Rosh Haniqra. Hard calcareous sandstone (kurkar), gravels and sandy soil in the sea-spray zone, $35^{\circ}05'07"E$ - $33^{\circ}05'30"N$. 10 m. 5.4.89, 54.004.

***Medicago minima* (L.) L., Fl. Angl.: 21 (1754)**

Philistine Plain: 11 km S of Ashkelon. Sandy soil developed on kurkar (calcareous sandstone). *Corydothymetum capitati*, $34^{\circ}34'34"46"E$ - $31^{\circ}34'20"N$, 70 m. 21.03.1989, 03.090; **Kinnrot Valley (Upper Jordan Valley):** 2 km NE of Kibbutz Haon. Steep limestone and sandstone slopes, $35^{\circ}38'30"E$ - $32^{\circ}44'00"N$. (-)150 m. 2.4.89, 39.072.

***Medicago orbicularis* (L.) Bartal., Cat. Piante Siena: 60 (1776)**

Judean Foothills: near Sedot Micha. Brown rendzina developing on nari crusts over Eocene chalk. Much of the area was burnt in summer 1988. *Ceratonia siliqua* - *Pistacia lentiscus* association, $34^{\circ}54'43"E$ - $31^{\circ}43'25"N$, 220 m. 21.03.1989, 02.037; **Philistine Plain:** 1 km S of Ashdod. Stable sand dunes, $34^{\circ}40'02"E$ - $31^{\circ}46'50"N$, 20 m. 21.03.1989,

04.038; **Kinnrot Valley (Upper Jordan Valley)**: near En Sheva (Tabkha). South-facing limestone slope, 35°32'20"E-32°52'20"N. (-)200 m. 3.4.89, 40.035.

***Medicago polymorpha* L., Sp. Pl.: 779 (1753) [*M. hispida* Gaertner]**

Judean Foothills: near Sedot Micha. Brown rendzina developing on nari crusts over Eocene chalk. Northern Negev: 5 km N of Beer Sheva. Brown loessial lithosol, *Noaeetum mucronatae*, 34°47'00"E-31°18'30"N. 300 m. 26.03.1989, 15.026; **Northern Negev:** sands of Nahal Sekher, 15 km S of Beer Sheva. Loessial stable sandy soil, *Noaeetum mucronatae*, 34°49'20"E-31°06'00"N. 330 m. 26.03.1989, 16.030; **Negev Highlands:** 8 km SW of Yerokham. Loessial soil and stony slopes, 34°53'10"E-30°56'00"N. 500 m. 27.03.1989, 24.020; **Judean Desert:** near Mishor Adumim. Stony slopes with nari crusts on Senonian chalk. Brown lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis brachyodon*, 35°19'20"E-31°48'10"N, 250 m. 22.03.1989, 05.069; **Lower Jordan Valley:** 1 km NE of Pzael, 18 km N of Jericho. Salty or leached calcareous soil, 35°27'30"E-32°03'20"N, (-)270 m. 23.03.1989, 09.032.

This taxon has been often considered as a mere synonym of *O. reclinata* L. (see Huber-Morath in Davis, Fl. Turkey 3: 378. 1970; Greuter & al., Med-Checklist 4: 163. 1989), or even ignored (Ivimey-Cook in Tutin & al., Fl. Eur. 2: 143-152. 1968). However, several authors, such as Dinsmore (in Post, Fl. Syria, ed. 2, 1: 308. 1932) and Zohary (Fl. Palaest. 2: 119. 1972) have recognised it as a variety of *O. reclinata*. In *O. mollis* the corolla is always shorter than the calyx and the leaflets are oblong to linear-cuneate, whereas in *O. reclinata* the corolla is longer than the calyx and the leaflets are wider, from obovate to suborbicular. The pods are short (4-8 mm) and usually included in the calyx in *O. mollis* but longer (6-14 mm) and often exceeding the calyx in *O. reclinata*. The seeds are also smaller in *O. mollis* than in *O. reclinata*. Consequently, *O. mollis* must be distinguished at species level as has correctly been done by Devesa (in Valdés & al., Fl. Andalucía Occid. 2: 149. 1987). *O. mollis* is not restricted to the E. Mediterranean as explicitly indicated by Huber-Morath (in Davis, Fl. Turkey 3: 378. 1970), but occurs all around the Mediterranean.

(-)10 m. 30.03.1989, 35.002.

Parietaria judaica L., Fl. Palaest.: 32 (1756) [*P. diffusa* Mert. & Koch]

Judean Mts: Jerusalem, near Ora. Terraces on marly-chalk with poor vegetation of *Coridothymetum capitati*, 35°09'00"E-31°45'15"N, 780 m. 24.03.1989, 12.028.

Parietaria lusitanica L., Sp. Pl.: 1052 (1753)

Judean Mts: Jerusalem, near Ora. Terraces on marly-chalk with poor vegetation of *Coridothymetum capitati*, 35°09'00"E-31°45'15"N, 780 m. 24.03.1989, 12.004; **Beth-Shean Valley**: 6 km SSW of Bet-Shean. Slightly saline seepages with date palms and *Phragmites australis*, dark clayey soil, 35°31'00"E-32°27'30"N. (-)200 m. 2.4.89, 38.028.

***Paronychia arabica* (L.) DC. in Lam., Encycl. 5: 24 (1804), subsp. *arabica* [*P. desertorum* Boiss.; *P. lenticulata* Ascherson & Schweinf.]**

Northern Negev: sands of Nahal Sekher, 15 km S of Beer Sheva. Loessial stable sandy soil, *Noaeetum mucronatae*, 34°49'20"E-31°06'00"N. 330 m. 26.03.1989, 16.005; **Negev Highlands:** 6 km SW of Dimona. Sandy loess soil near the nature reserve of *Iris petrana*, 34°59'00"E-31°01'30"N. 330 m. 27.03.1989, 22.006; **Southern Negev:** Nahal Paran junction with Ramon-Elat road. Pebbly wadi beds, 35°56'20"E-30°20'15"N. 390 m. 29.03.1989, 27.005.

Plants collected in Nahal Paran (n° 27.005) do not agree with the description of Zohary (Fl. Palaest. 1: 132. 1966) where this taxon is considered an annual with very long setae on the apex of sepals. The Nahal Paran plants are perennial with short setae, as indicated by Chaudhri (in Davis, Fl. Turkey 2: 253. 1967) for *P. arabica* subsp. *arabica* and by Maire (Fl. Afrique N. 9: 22. 1963) for *P. arabica* subsp. *lenticulata* Maire & Weiller.

B. VALDÉS

Judean Desert: near Mishor Adumim. Stony slopes with nari crusts on Senonian chalk. Brown lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis brachyodon*, 35°19'20"E-31°48'10"N, 250 m. 22.03.1989, 05.008; Lower Jordan Valley: 1 km NE of Pzael, 18 km N of Jericho. Salty or leached calcareous soil, 35°27'30"E-32°03'20"N, (-) 270 m. 23.03.1989, 09.044; Negev Highlands: 8 km SW of Yerokham. Loessial soil and stony slopes, 34°53'10"E-30°56'00"N. 500 m. 27.03.1989, 24.033; Southern Negev: Nahal Paran junction with Ramon-Elat road. Pebbly wadi beds, 35°56'20"E-30°20'15"N. 390 m. 29.03.1989, 27.020.

***Phalaris paradoxa* L., Sp. Pl.: ed. 2: 1665 (1763)**

Samarian Desert: near Maále Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.049; Kinnrot Valley (Upper Jordan Valley): near En Sheva (Tabkha). South-facing limestone slope, 35°32'20"E-32°52'20"N. (-)200 m. 3.4.89, 40.040.

***Phillyrea latifolia* L., Sp. Pl.: 8 (1753), subsp. *daninii* Valdés, subsp. nov. [*P. latifolia* subsp. *orientalis* Sébastien in Trav. Inst. Sci. Chérifien, Sér. Bot., 6: 84 (1956), nom. inval.]**

Fruticosa vel arborescens, foliis oblongo-ellipticis, obovatis vel ellipticis, dentato-serratis integerrimisve, cuneatis, breviter petiolatis; drupis 4-5 mm.

Judean Foothills: near Sedot Micha. Brown rendzina developing on nari crusts over Eocene chalk. Much of the area was burnt in summer 1988. *Ceratonia siliqua - Pistacia lentiscus* association, 34°54'43"E-31°43'25"N, 220 m. 21.03.1989, 02.057 (holotype, SEV); **Upper Galilee:** Near Ya'ara. Terra Rossa on hard limestone, maquis and clearings, 35°12'00"E-33°04'10"N. 200 m. 5.4.89, 53.003.

The plants from Israel (n° 02.057 & 53.003) clearly differ from those from the Iberian Peninsula and other areas of the W Mediterranean. The leaves are smaller (9-27 x 5-12 mm in the material from those locations), with cuneate limb, and the drupes are described as being 4-5 mm in diameter (Dinsmore in Post, ed. 2, Fl. Syria, 2: 183. 1933; Feinbrun-Dothan, Fl. Palaest. 3: 15. 1978). In typical *P. latifolia* from the W Mediterranean the leaves are larger, usually with a truncate or cordate base, and the drupes are also bigger (6-10 mm). Although most authors (e. g. Dinsmore [l.c.]; Feinbrun-Dothan [l.c.]; Yaltirik [in Davis, Fl. Turkey 6: 157-158. 1978]; Greuter & al. [Med-Checklist 4: 249. 1989]) do not separate the E Mediterranean plants as a distinct taxon, the plants which share these characters deserve recognition at subspecific level as proposed by Sébastian (l.c.) under the name *P. latifolia* subsp. *orientalis*. However, she did not include a Latin description of this subspecies, which makes her name invalid, and she selected as type a sheet from Montpellier with two specimens (Sébastian, l.c.: 84 and photograph) B. VALDÉS

Phleum subulatum (Savi) Ascherson & Graebner, Syn. Mitteleur. Fl. 2(1): 154 (1899)

Coastal Carmel: Atlit, coastal sands, salt marsh margins, and hard calcareous sandstone (kurkar), 34°56'00"E-32°42'20"N. 2-20 m. 6.4.89, 58.036.

Phragmites australis (Cav.) Steudel, Nomencl. Bot., ed. 2, 2: 324 (1841) [*P. communis* Trin.]

Negev Highlands: Makhtesh Hazera (Makhtesh Katan). Sandy alluvium, pebbly wadis and limestone outcrops, 35°13'00"E-30°57'30"N. (-)10 m. 30.03.1989, 35.024.

Picris amalecitana (Boiss.) Eig in Palestine J. Bot., Jerusalem Ser., 1: 70 (1938) [*P. intermedia* Eig]

Philistine Plain: 11 km S of Ashkelon. Sandy soil developed on kurkar (calcareous sandstone). *Corydothymetum capitati*, 34°34'34"46"E-31°34'20"N, 70 m. 21.03.1989, 03.001; 03.014; 03.022 p. p. (HUJ); **Kinnrot Valley (Upper Jordan Valley):** 2 km NE of Kibbutz Haon. Steep limestone and sandstone slopes, 35°38'30"E-32°44'00"N. (-)150 m. 2.4.89, 39.081; **Coastal Carmel:** Atlit, coastal sands, salt marsh margins, and hard calcareous sandstone (kurkar), 34°56'00"E-32°42'20"N. 2-20 m. 6.4.89, 58.012.

Picris asplenoides L., Sp. Pl.: 793 (1753) [*P. radicata* (Forsskål) Less.]

Philistine Plain: 11 km S of Ashkelon. Sandy soil developed on kurkar (calcareous sandstone). *Corydothymetum capitati*, 34°34'34"46"E-31°34'20"N, 70 m. 21.03.1989,

03.022 p. p. (B); Northern Negev: sands of Nahal Sekher, 15 km S of Beer Sheva. Loessial stable sandy soil, *Noaeetum mucronatae*, 34°49'20"E-31°06'00"N. 330 m. 26.03.1989, 16.019; Negev Highlands: 6 km SW of Dimona. Sandy loess soil near the nature reserve of *Iris petrana*, 34°59'00"E-31°01'30"N. 330 m. 27.03.1989, 22.043; Negev Highlands: Yamin-Rotem Plain, 10 km SSE of Dimona. Stable sand covering sandstone, 35°04'06"E-31°01'00"N. 330 m. 30.03.1989, 34.010.

***Picris galilaea* (Boiss.) Eig** in Palestine J. Bot., Jerusalem Ser., 1: 69 (1938)

Upper Galilee: Near Ya'ara. Terra Rossa on hard limestone, maquis and clearings, 35°12'00"E-33°04'10"N. 200 m. 5.4.89, 53.018.

As pointed out earlier (Lack, Rev. Orient. Sp. Picris, 1975; and in Davis, Fl. Turkey 5: 678-684, 1975), *Picris amaleciana* and *P. galilaea*, considered already by Eig (in Palestine J. Bot., Jerusalem Ser., 1: 65-79, 1939) to constitute "a natural series of species with gradual transition", are best regarded as a single, variable taxon. H. W. LACK

***Pimpinella cretica* Poiret** in Lam., Encycl. Suppl. 1: 684 (1811)

Philistine Plain: 11 km S of Ashkelon. Sandy soil developed on kurkar (calcareous sandstone). *Corydotothymetum capitati*, 34°34'34"46"E-31°34'20"N, 70 m. 21.03.1989, 03.016; **Lower Jordan Valley:** 1 km NE of Pzael, 18 km N of Jericho. Salty or leached calcareous soil, 35°27'30"E-32°03'20"N, (-)270 m. 23.03.1989, 09.011; **Kinnrot Valley (Upper Jordan Valley):** 2 km NE of Kibbutz Haon. Plantago coronopus L., Sp. Pl.: 115 (1753)

Dead Sea Valley: near Ormat's solar ponds, 2 km N of the Dead Sea northern coast. Salty soil in wadis, 35°30'31"E-31°48'10"N, (-)370 m. 22.03.1989, 07.004; **Lower Jordan Valley:** 1 km NE of Pzael, 18 km N of Jericho. Salty or leached calcareous soil, 35°27'30"E-32°03'20"N, (-)270 m. 23.03.1989, 09.052; **Lower Jordan Valley:** 2.5 km SSE of Pzael, 16 km N of Jericho. Deep alluvial salty soil, reserve of *Salvadora persica*, 35°27'05"E-32°01'00"N, (-)280 m. 23.03.1989, 10.005; 10.022; **Northern Negev:** 5 km N of Beer Sheva. Brown loessial lithosol, *Noaeetum mucronatae*, 34°47'00"E-31°18'30"N. 300 m. 26.03.1989, 15.008; **Negev Highlands:** Makhtesh Ramon, Karnei Ramon. Basalt outcrops and a few other substrata, 34°40'00"E-30°30'20"N. 770 m. 27.03.1989, 19.002; **Negev Highlands:** Nahal Elot. Slopes, cliffs and wadis, 34°36'30"E-30°32'01"N. 920-980 m. 27.03.1989, 21.033; **Bet-Shean Valley:** 6 km SSW of Bet-Shean. Slightly saline seepages with date palms and *Phragmites australis*, dark clayey soil, 35°31'00"E-32°27'30"N. (-)200 m. 2.4.89, 38.002; **Coastal Galilee:** coast of Rosh Haniqra. Hard calcareous sandstone (kurkar), gravels and sandy soil in the sea-spray zone, 35°05'07"E-33°05'30"N. 10 m. 5.4.89, 54.014; **Philisteian Plain:** 11 km S of Ashkelon. Sandy soil developed on kurkar (calcareous sandstone). *Corydothymetum capitati*, 34°34'34"46"E-31°34'20"N, 70 m. 21.03.1989, 03.027.

Plantago cretica L., Sp. Pl.: 114 (1753)

Samarian Desert: near Maále Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989,

08.077; **Golan**: Odem Forest, near Masaáda. Shallow soil on basalt, 35°45'15"E-33°13'00"N. 1010 m. 4.4.89, 48.027; **Upper Galilee**: Near Ya'ara. Terra Rossa on hard limestone, maquis and clearings, 35°12'00"E-33°04'10"N. 200 m. 5.4.89, 53.031.

Plantago cylindrica Forsskål, Fl. Aegypt.-Arab.: 31 (1775)

Northern Negev: sands of Nahal Sekher, 15 km S of Beer Sheva. Loessial stable sandy soil, *Noaeetum mucronatae*, 34°49'20"E-31°06'00"N. 330 m. 26.03.1989, 16.007.

Plantago lagopus L., Sp. Pl.: 114 (1753)

Northern Negev: 5 km N of Beer Sheva. Brown loessial lithosol, *Noaeetum mucronatae*, 34°47'00"E-31°18'30"N. 300 m. 26.03.1989, 15.068; **Kinnrot Valley (Upper Jordan Valley)**: near En Sheva (Tabkha). South-facing limestone slope, 35°32'20"E-32°52'20"N. (-)200 m. 3.4.89, 40.016.

Plantago lanceolata L., Sp. Pl.: 113 (1753)

Coastal Galilee: coast of Rosh Haniqra. Hard calcareous sandstone (kurkar), gravels and sandy soil in the sea-spray zone, 35°05'07"E-33°05'30"N. 10 m. 5.4.89, 54.008.

Plantago notata Lag., Gen. Sp. Pl.: 7 (1816)

Lower Jordan Valley: 1 km NE of Pzael, 18 km N of Jericho. Salty or leached calcareous soil, 35°27'30"E-32°03'20"N, (-)270 m. 23.03.1989, 09.058; **Negev Highlands**: 6 km SW of Dimona. Sandy loess soil near the nature reserve of *Iris petrana*, 34°59'00"E-31°01'30"N. 330 m. 27.03.1989, 22.038.

Plantago ovata Forsskål, Fl. Aegypt.-Arab.: 31 (1775)

Dead Sea Valley: near Mizpe Dragot, 15 km N of En Gedi. Slopes and small cliffs of dolomite and wadis, 35°19'20"E-31°35'15"N, (-) 350 m. 22.03.1989, 06.066; **Lower Jordan Valley**: 1 km NE of Pzael, 18 km N of Jericho. Salty or leached calcareous soil, 35°27'30"E-32°03'20"N, (-)270 m. 23.03.1989, 09.040; **Northern Negev**: 5 km N of Beer Sheva. Brown loessial lithosol, *Noaeetum mucronatae*, 34°47'00"E-31°18'30"N. 300 m. 26.03.1989, 15.014; **Negev Highlands**: Makhtesh Ramon, Karnei Ramon. Basalt outcrops and a few other substrata, 34°40'00"E-30°30'20"N. 770 m. 27.03.1989, 19.012; **Negev Highlands**: Nahal Elot. Slopes, cliffs and wadis, 34°36'30"E-30°32'01"N. 920-980 m. 27.03.1989, 21.052; **Southern Negev**: 8 km SE of Mizpe Ramon, Nahal Gevanim. Magmatic rocks (Nordmarkite), slopes, rock outcrops and wadi beds, 34°53'15"E-30°35'00"N. 520 m. 29.03.1989, 26.054; 26.064; **Arava Valley**: Yotvata. Disturbed ground and wadis, 35°03'30"E-29°59'10"N. 100 m. 29.03.1989, 31.013; **Kinnrot Valley (Upper Jordan Valley)**: 2 km NE of Kibbutz Haon. Steep limestone and sandstone slopes, 35°38'30"E-32°44'00"N. (-)150 m. 2.4.89, 39.010.

Plantago phaeostoma Boiss. & Heldr. in Boiss., Diagn. Pl. Orient., ser. 2, 4: 71 (1859)

Negev Highlands: Nahal Elot. Slopes, cliffs and wadis, 34°36'30"E-30°32'01"N. 920-980 m. 27.03.1989, 21.006.

Plantago sarcophylla Zohary in Palestine J. Bot., Jerusalem Ser., 1: 230 (1938)

Philistine Plain: 11 km S of Ashkelon. Sandy soil developed on kurkar (calcareous sandstone). *Corydothymetum capitati*, 34°34'34"46"E-31°34'20"N, 70 m. 21.03.1989, 03.011; **Coastal Galilee:** coast of Rosh Haniqra. Hard calcareous sandstone (kurkar), gravels and sandy soil in the sea-spray zone, 35°05'07"E-33°05'30"N. 10 m. 5.4.89, 54.007.

Poa bulbosa L., Sp. Pl.: 70 (1753)

Judean Foothills: near Sedot Micha. Brown rendzina developing on nari crusts over Eocene chalk. Much of the area was burnt in summer 1988. *Ceratonia siliqua* - *Pistacia lentiscus* association, 34°54'43"E-31°43'25"N, 220 m. 21.03.1989, 02.102; **Judean Mts:** Jerusalem, near Ora. Terraces on marly-chalk with poor vegetation of *Coridothymetum capitati*, 35°09'00"E-31°45'15"N, 780 m. 24.03.1989, 12.041; 12.043; **Mt. Carmel:** Upper Nahal Nesher, 2 km S of Nesher. Terra Rossa on hard limestone, 35°31'40"E-32°45'30"N. 280 m. 6.4.89, 57.018.

Poa eigii Feinbrun in Bull. Misc. Inform. 1940: 280, t. 7 f. 3 (1940)

Judean Desert: near Mishor Adumim. Stony slopes with nari crusts on Senonian chalk. Brown lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis brachyodon*, 35°19'20"E-31°48'10"N, 250 m. 22.03.1989, 05.006; **Samarian Desert:** near Ma'ale Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.051.

Poa infirma Kunth in Humboldt & al., Nov. Gen. Sp. 1: 158 (1816) [*P. exilis* (Tomm.) Murb.]

Golan: Nature Reserve (Bajuria). Grumusol and margins of a vernal pool, 35°39'30"E-32°54'30"N. 430 m. 3.4.89, 43.037.

Poa sinaica Steudel, Syn. Pl. Glumac. 1: 256 (1854)

Negev Highlands: Makhtesh Ramon, Karnei Ramon. Basalt outcrops and a few other substrata, 34°40'00"E-30°30'20"N. 770 m. 27.03.1989, 19.055; **Negev Highlands:** Nahal Elot. Slopes, cliffs and wadis, 34°36'30"E-30°32'01"N. 920-980 m. 27.03.1989,

21.005; Negev Highlands: 8 km SW of Yerokham. Loessial soil and stony slopes, 34°53'10"E-30°56'00"N. 500 m. 27.03.1989, 24.034; **Southern Negev:** 8 km SE of Mizpe Ramon, Nahal Gevanim. Magmatic rocks (Nordmarkite), slopes, rock outcrops and wadi beds, 34°53'15"E-30°35'00"N. 520 m. 29.03.1989, 26.051.

***Podonosma orientalis* (L.) Feinbrun** in Israel J. Bot. 25: 80 (1976) [*P. syriaca* (Labill.) Boiss.]

Samarian Desert: near Maále Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.096; **Negev Highlands:** Nahal Elot. Slopes, cliffs and wadis, 34°36'30"E-30°32'01"N. 920-980 m. 27.03.1989, 21.022; **Negev Highlands:** Makhtesh Hazera (Makhtesh Katan). Sandy alluvium, pebbly wadis and limestone outcrops, 35°13'00"E-30°57'30"N. (-)10 m. 30.03.1989, 35.022; **Coastal Carmel:** Atlit, coastal sands, salt marsh margins, and hard calcareous sandstone (kurkar), 34°56'00"E-32°42'20"N. 2-20 m. 6.4.89, 58.043.

***Polycarpaea robbairea* (O. Kuntze)** Greuter & Burdet in Willdenowia 12: 189 (1982)
[*Robbairea delileana* Milne-Redh.; *Robbairea prostrata* auct.]

Dead Sea Valley: near Mizpe Dragot, 15 km N of En Gedi. Slopes and small cliffs of dolomite and wadis, 35°19'20"E-31°35'15"N, (-) 350 m. 22.03.1989, 06.070; **Southern Negev:** Nahal Paran junction with Ramon-Elat road. Pebbly wadi beds, 35°56'20"E-30°20'15"N. 390 m. 29.03.1989, 27.025; **Negev Highlands:** Makhtesh Hazera (Makhtesh Katan). Sandy alluvium, pebbly wadis and limestone outcrops, 35°13'00"E-30°57'30"N. (-)10 m. 30.03.1989, 35.018.

***Polycarpon succulentum* (Delile)** J. Gay in Rev. Bot. Recueil Mens. 2: 372 (1847)

Philistine Plain: 11 km S of Ashkelon. Sandy soil developed on kurkar (calcareous sandstone). *Corydanthemum capitati*, 34°34'34"46"E-31°34'20"N, 70 m. 21.03.1989, 03.063; **Philistine Plain:** 1 km S of Ashdod. Stable sand dunes, 34°40'02"E-31°46'50"N, 20 m. 21.03.1989, 04.015; **Northern Negev:** sands of Nahal Sekher, 15 km S of Beer Sheva. Loessial stable sandy soil, *Noaeetum mucronatae*, 34°49'20"E-31°06'00"N. 330 m. 26.03.1989, 16.040.

***Polygala monspeliaca* L., Sp. Pl.: 702 (1753)**

Judean Foothills: near Sedot Micha. Brown rendzina developing on nari crusts over Eocene chalk. Much of the area was burnt in summer 1988. *Ceratonia siliqua* - *Pistacia lentiscus* association, 34°54'43"E-31°43'25"N, 220 m. 21.03.1989, 02.017; **Mt. Hermon:** near the tomb and oak reserve of Sheikh Othman, 1 km E of Qalaát Namrud, 35°43'50"E-33°15'00"N. 800 m. 4.4.89, 51.020.

Polygonum argyrocoleum G. Kunze in Linnaea 20: 17 (1847)

Lower Jordan Valley: 2.5 km SSE of Pzael, 16 km N of Jericho. Deep alluvial salty soil, reserve of *Salvadora persica*, 35°27'05"E-32°01'00"N, (-)280 m. 23.03.1989, 10.010.

Polygonum equisetiforme Sm., Fl. Graec. Prodri. 1: 266 (1809)

Philistinean Plain: 1 km S of Ashdod. Stable sand dunes, 34°40'02"E-31°46'50"N, 20 m. 21.03.1989, 04.013.

Polygonum setosum Jacq., Observ. Bot. 3: 8 (1768)

Golan: Nature Reserve (Bajuria). Grumusol and margins of a vernal pool, 35°39'30"E-32°54'30"N. 430 m. 3.4.89, 43.009.

Prangos ferulacea (L.) Lindley in Quart. J. Sci. Lit. Arts 19: 7 (1825) [*Cachrys ferulacea* (L.) Calestani; *Prangos goniocarpa* (Boiss.) Zohary; see Hermstadt & Heyn in Boissiera 26: 39.1989]

Samarian Desert: near Ma'ale Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.031.

Prasium majus L., Sp. Pl.: 601 (1753)

Judean Foothills: near Sedot Micha. Brown rendzina developing on nari crusts over Eocene chalk. Much of the area was burnt in summer 1988. *Ceratonia siliqua* - *Pistacia lentiscus* association, 34°54'43"E-31°43'25"N, 220 m. 21.03.1989, 02.060; **Judean Mts:** Kiryat Anavim. 10 km W of Jerusalem. Limestone hill, Terra Rossa, a Pine forest that was burnt 08/1987, 35°07'51"E-31°48'50"N. 750 m. 24.03.1989, 14.019; **Negev Highlands:** Nahal Elot. Slopes, cliffs and wadis, 34°36'30"E-30°32'01"N. 920-980 m. 27.03.1989, 21.011.

Pseuderucaria clavata (Boiss. & Reuter) O. E. Schulz in Bot. Jahrb. Syst. 54, Beibl. 119: 54 (1916)

Negev Highlands: Makhtesh Hazera (Makhtesh Katan). Sandy alluvium, pebbly wadis and limestone outcrops, 35°13'00"E-30°57'30"N. (-)10 m. 30.03.1989, 35.033.

Pseudorlaya pumila (L.) Grande in Nuovo Giorn. Bot. Ital., ser. 2, 32: 86 (1925) [*Orlaya pumila* (L.) Halász]

Coastal Galilee: coast of Rosh Hanikra. Hard calcareous sandstone (kurkar), gravels and sandy soil in the sea-spray zone, 35°05'07"E-33°05'30"N. 10 m. 5.4.89, 54.028.

Psilurus incurvus (Gouan) Schinz & Thell. in Vierteljahrsschr. Naturf. Ges. Zürich 58: 50 (1913)

Judean Foothills: near Sedot Micha. Brown rendzina developing on nari crusts over Eocene chalk. Much of the area was burnt in summer 1988. *Ceratonia siliqua* - *Pistacia lentiscus* association, 34°54'43"E-31°43'25"N, 220 m. 21.03.1989, 02.093; **Philistine Plain:** 11 km S of Ashkelon. Sandy soil developed on kurkar (calcareous sandstone). *Corydothymetum capitati*, 34°34'34"46"E-31°34'20"N, 70 m. 21.03.1989, 03.053; **Samarian Desert:** near Ma'ale Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.058; **Northern Negev:** 5 km N of Beer Sheva. Brown loessial lithosol, *Noaeetum mucronatae*, 34°47'00"E-31°18'30"N. 300 m. 26.03.1989, 15.047.

Psylliostachys spicata (Willd.) Nevski in Trudy Bot. Inst. Akad. Nauk SSSR, Ser. 1, Fl. Sist. Vyss. Rast., 4: 314 (1937) [*Limonium spicatum* (Willd.) O. Kuntze]

Lower Jordan Valley: 2.5 km SSE of Pzael, 16 km N of Jericho. Deep alluvial salty soil, reserve of *Salvadora persica*, 35°27'05"E-32°01'00"N, (-)280 m. 23.03.1989, 10.004.

Pteranthus dichotomus Forsskål, Fl. Aegypt.-Arab.: Ixii, 36 (1775)

Dead Sea Valley: near Mizpe Dragot, 15 km N of En Gedi. Slopes and small cliffs of dolomite and wadis, 35°19'20"E-31°35'15"N, (-) 350 m. 22.03.1989, 06.008; **Negev Highlands:** Makhtesh Ramon, Karnei Ramon. Brown loessial lithosol, *Noaeetum mucronatae*, 34°47'00"E-31°18'30"N. 300 m. 26.03.1989, 15.041.

Rosularia libanotica (Labill.) Muirh. in P. H. Davis, Fl. Turkey 4: 216 (1972) [*Rosularia sempervivum* subsp. *libanotica* (Labill.) Eggli]

Mt. Hermon: lower teliferique. Slopes of hard karstic Jurassic limestones, 35°46'20"E-33°17'30"N. 1690 m. 4.4.89, 49-Ham No. 31100 (HUJ, U). 2n=18.

According to Eggli (in Bradleya 6, Suppl.: 1-119. 1988) two subspecies of *Rosularia sempervivum* occur in Israel, viz., subsp. *libanotica* (including *R. kesrouanensis* Mouterde) and subsp. *persica* (Boiss.) Eggli. Both are diploid ($x = 9$) and morphologically rather variable. The assignment of the specimen is not conclusive. It resembles subsp. *libanotica* most closely in its flat rosettes with spathulate and slightly emarginate leaves entirely and densely glandular-pubescent inflorescences, pale pink, widely funnel-shaped, flowers with reddish veins, and glabrous follicles gradually tapering into the long style (more than 1 mm). On the other hand the almost glabrous leaves with sparsely ciliate or serrulate margins, shortly adnate (1/3) filaments, and broadly quadrate nectary scales indicate an affinity with subsp. *persica*. (H.T HART). [For the purpose of this list we have retained Med-Checklist nomenclature].

In contrast to the often perennial large, and much branched forms of *S. hispanicum* from Europe and Anatolia, the plants from Israel are strictly monocarpic and usually quite small, with simple stems. Furthermore, they have broader, less glaucous leaves, which usually lack papillae at the tip. The specimen n° 21.003 is of extraordinarily small and depauperate plants with short, simple stems and strongly reduced inflorescences with only 1 or 2 flowers (rarely 5). The flowers of *S. hispanicum* are normally 6- or 7-merous (5- to 9-merous) and obdiplostemonous. These specimens, however, have 5-merous (rarely 6-merous), predominantly haplostemonous flowers, which is extremely unusual in *S. hispanicum*. Their nectary scales are oblong and faintly denticulate instead of broadly spatulate and coarsely dentate to deeply bilobate. They resemble the plants collected by Ham (08-Ham, 13-Ham, and 20-Ham), which also have small nectary scales and partial reduction of the number of stamens. Similarly, they may be autogamous. The cultivated plants (from 08-Ham, 13-Ham, and 20-Ham), however, had many-flowered inflorescences and 6- or 7-merous flowers.

H.T HART

Sedum laconicum Boiss. & Heldr. in Boiss., Diagn. Pl. Orient. 6: 55 (1846), subsp. *pallidum* Hart & Ham in Israel J. Bot. (in press)

Mt. Hermon: near the tomb and oak reserve of Sheikh Othman, 1 km E of Qalaát Namrud, 35°43'50"E-33°15'00"N. 800 m. 4.4.89, 51-Ham n° 31103, 2n=32.

Differs from *S. laconicum* subsp. *laconicum* from the Greek mainland in that it has larger flowers with cream-coloured or almost white petals. Furthermore, subsp. *pallidum* is tetraploid (x=8).

H.T HART

Sedum litoreum Guss., Pl. Rar.: 185 (1826), subsp. *litoreum*

Coastal Galilee: coast of Rosh Hanikra. Hard calcareous sandstone (kurkar), gravels and sandy soil in the sea-spray zone, 35°05'07"E-33°05'30"N. 10 m. 5.4.89, 54.020 and 54-Ham No. 31107 2n=60; **Coastal Carmel**: Atlit, coastal sands, salt marsh margins, and hard calcareous sandstone (kurkar), 34°56'00"E-32°42'20"N. 2-20 m. 6.4.89, 58-Ham No. 31100 2n=40.

The typical form of *S. litoreum* is autogamous or pseudocleistogamous. Its flowers are rather small and have narrow petals, c. 5 (usually less than 10) stamens, small anthers (0.5-1 mm), and short styles (c. 0.5 mm). *S. litoreum* subsp. *litoreum* is common and widely distributed in coastal areas of the eastern part of the Mediterranean region. The

exogamous form, subsp. *exogamum* Hart (in Hart & Alpinar, in prep.), has larger, obdiplostemonous flowers and appears to be endemic to Crete H.T HART

The latter is quite distinctive in the field and has been described as a separate species, *Sedum praesidis* Runemark & Greuter (in Willdenowia 11: 18. 1981) = *S. litoreum* subsp. *praesidis* Runemark & Greuter, comb. nov. Outside Crete, it has been recently recorded from the island of Amathia in the Karpathos group (see Raus in Bot. Hron. 9:27. 1989). W. GREUTER

Sedum rubens L., Sp. Pl.: 432 (1753)

Judean Foothills: near Sedot Micha. Brown rendzina developing on nari crusts over Eocene chalk. Much of the area was burnt in summer 1988. *Ceratonia siliqua* - *Pistacia lentiscus* association, 34°54'43"E-31°43'25"N, 220 m. 21.03.1989, 02-Ham No. 31074, 2n=10; **Samarian Desert:** near Maále Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.004; **Judean Mts:** Jerusalem, Givat Bet Hakerem, near Bet Hakerem. Dolomite outcrops, Veradim formation, Terra Rossa in karstic landscape, 35°11'30"E-31°46', 770 m. 24.03.1989, 13.017 and 13-Ham No. 31081, 2n=10; **Negev Highlands:** 5 km SW of Yerokham. Loessial soil and near outcrops of smooth-faced limestone, 34°53'40"E-31°58'00"N. 500 m. 27.03.1989, 23-Ham No. 31085, 2n=20; **Kinnrot Valley (Upper Jordan Valley):** 2 km NE of Kibbutz Haon. Steep limestone and sandstone slopes, 35°38'30"E-32°44'00"N. (-)150 m. 2.4.89, 39-Ham No. 31088, 2n=10; **Golan:** near the ancient synagogue of Qazrin. Protogrumusol on basalt, 35°42'32"E-32°59'10"N. 350 m. 3.4.89, 44-Ham No. 31096, 2n=16; **Mt. Carmel:** Upper Nahal Nesher, 2 km S of Nesher. Terra Rossa on hard limestone, 35°31'40"E-32°45'30"N. 280 m. 6.4.89, 57-Ham No. 31109, 2n=20; **Coastal Carmel:** Atlit, coastal sands, salt marsh margins, and hard calcareous sandstone (kurkar), 34°56'00"E-32°42'20"N. 2-20 m. 6.4.89, 58-Ham No. 31114, 2n=10.

The typical form of *S. rubens* is autogamous or pseudocleistogamous. It has haplostemonous flowers (rarely with more than 5 stamens) with erect or patent petals, small anthers (less than 1 mm), and short styles (0.5-1 mm). Although it has been reported from Israel (Zohary, Fl. Palaest. 2: 7. 1972), the present collections belong to a different taxon. The plants are exogamous and their obdiplostemonous, proterandrous flowers have large anthers and long styles. This form of *S. rubens* has often been considered to be conspecific with *S. pallidum* MB. (Boissier, Fl. Orient. 2: 790. 1872; Mouterde Fl. Liban Syrie 2: 187. 1970; Chamberlain in Davis, Fl. Turkey 4: 242. 1972; Zohary, Fl. Palaest. 2: 7. 1972). However, the two taxa differ in a number of characters and, moreover, they are reproductively isolated (Hart in Willdenowia 15: 115-135. 1985; Hart in Fl. Medit. 1: 31-61. 1991). *S. rubens* is strictly annual, with erect, usually simple shoots, whereas *S. pallidum* is perennial and produces branching and rooting non-flowering shoots at the base of the ascending flowering shoots. Furthermore, the basal leaves of *S. rubens* are in whorls of four, and it has predominantly elliptic petals (broadest at the middle), usually papillate filaments (basal part), and papillate follicles. *S. pallidum* and the obdiplostemonous forms of *S. rubens* are completely allopatric. *S. pallidum* is a Euxine element restricted to the regions bordering the southern part of the Black Sea, whereas the obdiplostemonous, exogamous forms of *S. rubens* are typical east Mediterranean (Aegean) taxa (Hart & Alpinar in Bot. Hron. 10: 641-649. 1991).

Seidlitzia rosmarinus Boiss., Fl. Orient. 4: 951 (1879) [*Salsola rosmarinus* (Boiss.) Solms-Laub.]

Dead Sea Valley: near Ormat's solar ponds, 2 km N of the Dead Sea northern coast. Salty soil in wadis, 35°30'31"E-31°48'10"N, (-)370 m. 22.03.1989, 07.010.

Senecio flavus (Decaisne) Schultz-Bip. in Webb & Berth., Hist. Nat. Iles Canaries 3 (2, 2): 317 (1847)

Southern Negev: 8 km SE of Mizpe Ramon, Nahal Gevanim. Magmatic rocks (Nordmarkite), slopes, rock outcrops and wadi beds, 34°53'15"E-30°35'00"N. 520 m. 29.03.1989, 26.026; 26.046; **Southern Negev:** Nahal Paran junction with Ramon-Elat road. Pebby wadi beds, 35°56'20"E-30°20'15"N. 390 m. 29.03.1989, 27.038.

Senecio glaucus L., Sp. Pl.: 868 (1753) [*S. coronopifolius* Desf.]

Philistinean Plain: 1 km S of Ashdod. Stable sand dunes, 34°40'02"E-31°46'50"N, 20 m. 21.03.1989, 04.046; **Northern Negev:** 5 km N of Beer Sheva. Brown loessial lithosol, *Noaeetum mucronatae*, 34°47'00"E-31°18'30"N. 300 m. 26.03.1989, 15.006; **Negev Highlands:** 8 km SW of Yerokham. Loessial soil and stony slopes, 34°53'10"E-30°56'00"N. 500 m. 27.03.1989, 24.039.

Senecio joppensis Dinsmore in Post, Fl. Syria, ed. 2, 2: 69 (1932)

Coastal Carmel: Atlit, coastal sands, salt marsh margins, and hard calcareous sandstone (kurkar), 34°56'00"E-32°42'20"N. 2-20 m. 6.4.89, 58.011.

Senecio vernalis Waldst. & Kit., Descr. Icon. Pl. Hung. 1: 23, t. 24 (1802)

Philistinean Plain: 11 km S of Ashkelon. Sandy soil developed on kurkar (calcareous sandstone). *Corydothymetum capitati*, 34°34'34"46"E-31°34'20"N, 70 m. 21.03.1989, 03.007; **Samarian Desert:** near Ma'ale Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.067; **Lower Jordan Valley:** 1 km NE of Pzael, 18 km N of Jericho. Salty or leached calcareous soil, 35°27'30"E-32°03'20"N, (-)270 m. 23.03.1989, 09.013; **Judean Mts:** Kiryat Anavim. 10 km W of Jerusalem. Limestone hill, Terra Rossa, a Pine forest that was burnt 08/1987, 35°07'51"E-31°48'50"N. 750 m. 24.03.1989, 14.028; **Golan:** Nature Reserve (Bajuria). Grumusol and margins of a vernal pool, 35°39'30"E-32°54'30"N. 430 m. 3.4.89, 43.014; **Mt. Hermon:** near the tomb and oak reserve of

Sheikh Othman, 1 km E of Qalaát Namrud, 35°43'50"E-33°15'00"N. 800 m. 4.4.89, 51.006.

Senecio vulgaris L., Sp. Pl.: 867 (1753)

Golan: Odem Forest, near Masaáda. Shallow soil on basalt, 35°45'15"E-33°13'00"N. 1010 m. 4.4.89, 48.028.

Serratula cerinthifolia (Sm.) Boiss., Fl. Orient. 3: 585 (1875)

Judean Mts: Kiryat Anavim. 10 km W of Jerusalem. Limestone hill, Terra Rossa, a Pine forest that was burnt 08/1987, 35°07'51"E-31°48'50"N. 750 m. 24.03.1989, 14.033.

Sherardia arvensis L., Sp. Pl.: 102 (1753)

Judean Foothills: near Sedot Micha. Brown rendzina developing on nari crusts over Eocene chalk. Much of the area was burnt in summer 1988. *Ceratonia siliqua* - *Pistacia lentiscus* association, 34°54'43"E-31°43'25"N, 220 m. 21.03.1989, 02.062; Judean Mts: Jerusalem, Givat Bet Hakerem, near Bet Hakerem. Dolomite outcrops, Veradim formation, Terra Rossa in karstic landscape, 35°11'30"E-31°46'00"N, 770 m. 24.03.1989, 13.038; Golan: Nature Reserve (Bajuria). Grumusol and margins of a vernal pool, 35°39'30"E-32°54'30"N. 430 m. 3.4.89, 43.044.

Silene aegyptiaca (L.) L. fil., Suppl. Pl.: 241 (1782)

Mt. Hermon: near the tomb and oak reserve of Sheikh Othman, 1 km E of Qalaát Namrud, 35°43'50"E-33°15'00"N. 800 m. 4.4.89, 51.004.

Silene alexandrina (Ascherson) Danin in Israel J. Bot. 36: 65 (1987) [*S. apetala* Willd. var. *alexandrina* Ascherson]

Negev Highlands: 2 km NW of Yerokham. Smooth-faced limestone outcrops and wadis, 34°54'30"E-31°00'05"N. 330 m. 26.03.1989, 17.016.

Silene behen L., Sp. Pl.: 418 (1753)

Upper Galilee: Near Ya'ara. Terra Rossa on hard limestone, maquis and clearings, 35°12'00"E-33°04'10"N. 200 m. 5.4.89, 53.002.

Silene colorata Poiret, Voy. Barbarie 2: 163 (1789)

Philisteian Plain: 11 km S of Ashkelon. Sandy soil developed on kurkar (calcareous sandstone). *Corydothymetum capitati*, 34°34'34"46"E-31°34'20"N, 70 m. 21.03.1989, 03.059; **Philisteian Plain:** 1 km S of Ashdod. Stable sand dunes, 34°40'02"E-31°46'50"N, 20 m. 21.03.1989, 04.003; **Samarian Desert:** near Ma'ale Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.039; **Northern Negev:** 5 km N of Beer Sheva. Brown loessial lithosol, *Noaeetum mucronatae*, 34°47'00"E-31°18'30"N. 300 m. 26.03.1989, 15.061; **Northern Negev:** sands of Nahal Sekher, 15 km S of Beer Sheva. Loessial stable sandy soil, *Noaeetum mucronatae*, 34°49'20"E-31°06'00"N. 330 m. 26.03.1989, 16.008; **Negev Highlands:** Nahal Elot. Slopes, cliffs and wadis, 34°36'30"E-30°32'01"N. 920-980 m. 27.03.1989, 21.051; **Coastal Carmel:** Atlit, coastal sands, salt marsh margins, and hard calcareous sandstone (kurkar), 34°56'00"E-32°42'20"N. 2-20 m. 6.4.89, 58.041.

Silene coniflora Otth in DC. Prodr. 1: 371 (1824)

Negev Highlands: Nahal Loz and Borot Loz (various habitatas), 34°39'30"E-30°30'00"N. 960-1,000 m. 27.03.1989, 20.002; **Negev Highlands:** Nahal Elot. Slopes, cliffs and wadis, 34°36'30"E-30°32'01"N. 920-980 m. 27.03.1989, 21.030.

Silene conoidea L., Sp. Pl.: 418 (1753)

Lower Galilee: 1 km N of Nazareth. Cultivated rendzina on Senonian chalk, 35°19'00"E-32°44'00"N. 400 m. 6.4.89, 55.006.

Silene decipiens Barceló in Anales Soc. Esp. Hist. Nat. 8: 340 (1879) [*S. apetala* auct.]

Lower Jordan Valley: 1 km NE of Pzael, 18 km N of Jericho. Salty or leached calcareous soil, 35°27'30"E-32°03'20"N, (-)270 m. 23.03.1989, 09.055; **Northern Negev:** 5 km N of Beer Sheva. Brown loessial lithosol, *Noaeetum mucronatae*, 34°47'00"E-31°18'30"N. 300 m. 26.03.1989, 15.060; **Negev Highlands:** Nahal Elot. Bet-Shean Valley: 6 km SSW of Bet-Shean. Slightly saline seepages with date palms and *Phragmites australis*, dark clayey soil, 35°31'00"E-32°27'30"N. (-)200 m. 2.4.89, 38.012.

Tamus communis L., Sp. Pl.: 1028 (1753)

Upper Galilee: Near Ya'ara. Terra Rossa on hard limestone, maquis and clearings, 35°12'00"E-33°04'10"N. 200 m. 5.4.89, 53.012.

Tamus orientalis Thiébaut in Bull. Soc. Bot. France 81: 119 (1934)

Judean Mts: Jerusalem, Givat Bet Hakerem, near Bet Hakerem. Dolomite outcrops, Veradim formation, Terra Rossa in karstic landscape, 35°11'30"E-31°46'00"N, 770 m. 24.03.1989, 13.039.

Taraxacum cyprium Lindb. fil. in Acta Soc. Sci. Fenn. Ser. B, Op. Biol. 2 (7): 36 (1946) [*T. megalorrhizon* (Forsskål) Hand.-Mazz., p.p.]

Golan: Odem Forest, near Masaáda. Shallow soil on basalt, 35°45'15"E-33°13'00"N. 1010 m. 4.4.89, 48.024.

Teesdalia coronopifolia (J. P. Bergeret) Thell. in Repert. Spec. Nov. Regni Veg. 10: 289 (1912)

Golan: Odem Forest, near Masaáda. Shallow soil on basalt, 35°45'15"E-33°13'00"N. 1010 m. 4.4.89, 48.032.

Telmissa microcarpa (Sm.) Boiss., Fl. Orient. 2: 795 (1872) [*Sedum microcarpum* (Sm.) Schönl.]

Judean Foothills: near Sedot Micha. Brown rendzina developing on nari crusts over Eocene chalk. Much of the area was burnt in summer 1988. *Ceratonia siliqua* - *Pistacia lentiscus* association, 34°54'43"E-31°43'25"N, 220 m. 21.03.1989, 02.035; **Samarian Desert:** near Maále Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.005; **Lower Jordan Valley:** 1 km NE of Pzael, 18 km N of Jericho. Salty or leached calcareous soil, 35°27'30"E-32°03'20"N, (-)270 m. 23-Ham No. 31084, 2n=14; **Kinnrot Valley (Upper Jordan Valley):** near En Sheva (Tabkha). South-facing limestone slope, 35°32'20"E-32°52'20"N. (-)200 m. 3.4.89, 40-Ham No. 31090, 2n=14; **Coastal Carmel:** Atlit, coastal sands, salt marsh margins, and hard calcareous sandstone (kurkar), 34°56'00"E-32°42'20"N. 2-20 m. 6.4.89, 58-Ham No. 31112, 2n=14.

Similar to other strictly annual *Sedoideae* adapted to a very short growing period, *Sedum microcarpum* is highly specialized. Its flowers are autogamous, very small, partly sunk into the branches, 3- to 5-merous and haplostemonous. The anthers are very small, with few pollen grains, and each carpel contains only one ovule (rarely 2). The ripe follicles do not open along the ventral suture, but separate from the receptacle still encasing the single mature seed, which completely fills its lumen. Because of this

combination of advanced and partly unique characters *S. microcarpum* has been classified in the monotypic genus *Telmissa* Fenzl (Pug. Pl. Nov.: 15. 1842; Boissier, Fl. Orient. 2: 795. 1872). However, the mere combination of a large number of specialized characters is no justification for separating this peculiar and conspicuous annual species from its nearest relatives (most probably *S. caespitosum*). Recognition of the monophyletic *Telmissa*, instead of improving taxonomy of the *Sedoideae* or clarifying evolutionary relationships among the taxa, merely enhances the paraphyletic condition of the genus *Sedum*. (H. T HART). [For the purpose of this list we do, however, follow the Med-Checklist classification].

Philistine Plain: 11 km S of Ashkelon. Sandy soil developed on kurkar (calcareous sandstone). *Corydothymetum capitati*, 34°34'34"46"E-31°34'20"N, 70 m. 21.03.1989, 03.060; **Judean Desert:** near Mishor Adumim. Stony slopes with nari crusts on Senonian chalk. Brown lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis brachyodon*, 35°19'20"E-31°48'10"N, 250 m. 22.03.1989, 05.071.

Trifolium cherleri L., Demonstr. Pl.: 21 (1753)

Philistine Plain: 11 km S of Ashkelon. Sandy soil developed on kurkar (calcareous sandstone). *Corydothymetum capitati*, 34°34'34"46"E-31°34'20"N, 70 m. 21.03.1989, 03.100; **Kinnrot Valley (Upper Jordan Valley):** 2 km NE of Kibbutz Haon. Steep limestone and sandstone slopes, 35°38'30"E-32°44'00"N. (-)150 m. 2.4.89, 39.071.

Trifolium clusii Godron & Gren. in Gren. & Gordon, Fl. France 1: 414 (1849)

Upper Galilee: Near Ya'ara. Terra Rossa on hard limestone, maquis and clearings, 35°12'00"E-33°04'10"N. 200 m. 5.4.89, 53.041.

Trifolium clypeatum L., Sp. Pl.: 769 (1753)

Judean Foothills: near Sedot Micha. Brown rendzina developing on nari crusts over Eocene chalk. Much of the area was burnt in summer 1988. *Ceratonia siliqua* - *Pistacia lentiscus* association, 34°54'43"E-31°43'25"N, 220 m. 21.03.1989, 02.039; **Golan:** 5 km E of Almagor. Pseudosavanna of *Ziziphus spina-christi* accompanied by annuals; protogrumusol on basalt, 35°39'30"E-32°54'30"N. (-)40 m. 3.4.89, 42.008; **Mt. Hermon:** near the tomb and oak reserve of Sheikh Othman, 1 km E of Qala'at Namrud, 35°43'50"E-33°15'00"N. 800 m. 4.4.89, 51.019.

Trifolium dasyurum C. Presl, Symb. Bot. 1: 53 (1831) [*T. formosum* Dum.-Urville]

Judean Desert: near Mishor Adumim. Stony slopes with nari crusts on Senonian chalk. Brown lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis brachyodon*, 35°19'20"E-31°48'10"N, 250 m. 22.03.1989, 05.087; **Samarian Desert:** near Ma'ale Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.045; **Negev**

Highlands: 5 km SW of Yerokham. Loessial soil and near outcrops of smooth-faced limestone, 34°53'40"E-31°58'00"N. 500 m. 27.03.1989, 23.004; **Golan:** Nature Reserve (Bajuria). Grumusol and margins of a vernal pool, 35°39'30"E-32°54'30"N. 430 m. 3.4.89, 43.026.

Trifolium dichroanthum Boiss., Diagn. Pl. Orient. 9: 20 (1849)

Philistinean Plain: 11 km S of Ashkelon. Sandy soil developed on kurkar (calcareous sandstone). *Corydothymetum capitati*, 34°34'34"46"E-31°34'20"N, 70 m. 21.03.1989, 03.102.

Trifolium eriosphaerum Boiss., Diagn. Pl. Orient. 9: 25 (1849)

Samarian Desert: near Ma'ale Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.015; **Judean Mts:** Jerusalem, Givat Bet Hakerem, near Bet Hakerem. Dolomite outcrops, Veradim formation, Terra Rossa in karstic landscape, 35°11'30"E-31°46'00"N, 770 m. 24.03.1989, 13.051; **Golan:** Odem Forest, near Masa'ada. Shallow soil on basalt, 35°45'15"E-33°13'00"N. 1010 m. 4.4.89, 48.020.

Trifolium erubescens Fenzl, Pug. Pl. Nov. Syr.: 5 (1842)

Golan: 5 km E of Almagor. Pseudosavanna of *Ziziphus spina-christi* accompanied by annuals; protogrumusol on basalt, 35°39'30"E-32°54'30"N. (-)40 m. 3.4.89, 42.004.

Trifolium glanduliferum Boiss., Diagn. Pl. Orient. 2: 30 (1843) [*T. nervulosum* Boiss. & Heldr.]

Golan: Nature Reserve (Bajuria). Grumusol and margins of a vernal pool, 35°39'30"E-32°54'30"N. 430 m. 3.4.89, 43.011; **Golan:** near the ancient synagogue of Qazrin. Protogrumusol on basalt, 35°42'32"E-32°59'10"N. 350 m. 3.4.89, 44.012.

Trifolium israeliticum D. Zohary & Katzn. in Austral. J. Bot. 6: 179 (1958)

Golan: Nature Reserve (Bajuria). Grumusol and margins of a vernal pool, 35°39'30"E-32°54'30"N. 430 m. 3.4.89, 43.008.

Trifolium nigrescens Viv., Fl. Ital. Fragm.: 12. t. 13 (1808) [incl. *T. meneghinianum* G. C. Clementi]

Upper Galilee: Near Ya'ara. Terra Rossa on hard limestone, maquis and clearings, 35°12'00"E-33°04'10"N. 200 m. 5.4.89, 53.010.

Trifolium palaestinum Boiss., Diagn. Pl. Orient. 9: 21 (1849)

Philisteian Plain: 11 km S of Ashkelon. Sandy soil developed on kurkar (calcareous sandstone). *Corydothymetum capitati*, 34°34'34"46"E-31°34'20"N, 70 m. 21.03.1989, 03.088; **Philisteian Plain:** 1 km S of Ashdod. Stable sand dunes, 34°40'02"E-31°46'50"N, 20 m. 21.03.1989, 04.035.

Trifolium pauciflorum Dum.-Urville in Mém. Soc. Linn. Paris 1: 350 (1822)

Golan: Har Shipon. Volcanic ash, 35°45'50"E-33°04'17"N. 740 m. 4.4.89, 46.009.

Trifolium philistaeum Zohary in Israel J. Bot. 19: 296 (1970)

Philisteian Plain: 11 km S of Ashkelon. Sandy soil developed on kurkar (calcareous sandstone). *Corydothymetum capitati*, 34°34'34"46"E-31°34'20"N, 70 m. 21.03.1989, 03.094.

Trifolium physodes MB., Fl. Taur.-Caucas. 2: 217 (1808)

Mt. Hermon: near the tomb and oak reserve of Sheikh Othman, 1 km E of Qalaát Namrud, 35°43'50"E-33°15'00"N. 800 m. 4.4.89, 51.017.

Trifolium pilulare Boiss., Diagn. Pl. Orient. 2: 29 (1843)

Samarian Desert: near Maále Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.020.

Trifolium prophetarum Hossain in Notes Roy. Bot. Gard. Edinburgh 23: 421 (1961)

Samarian Desert: near Maále Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.025.

Trifolium purpureum Loisel., Fl. Gall.: 484 (1807)

Philisteian Plain: 11 km S of Ashkelon. Sandy soil developed on kurkar (calcareous sandstone). *Corydothymetum capitati*, 34°34'34"46"E-31°34'20"N, 70 m. 21.03.1989, 03.097; **Bet-Shean Valley:** 6 km SSW of Bet-Shean. Slightly saline seepages with date palms and *Phragmites australis*, dark clayey soil, 35°31'00"E-32°27'30"N. (-)200 m. 2.4.89, 38.007; **Golan:** Nature Reserve (Bajuria). Grumusol and margins of a vernal pool, 35°39'30"E-32°54'30"N. 430 m. 3.4.89, 43.012.

***Trifolium resupinatum* L., Sp. Pl.: 771 (1753)**

Judean Mts: Kiryat Anavim. 10 km W of Jerusalem. Limestone hill, Terra Rossa, a Pine forest that was burnt 08/1987, 35°07'51"E-31°48'50"N. 750 m. 24.03.1989, 14.040; **Negev Highlands:** Mizpe Ramon. Weeds in gardens and among houses, 34°29'00"E-30°35'20"N. 860 m. 27.03.1989, 18.019; **Golan:** near the ancient synagogue of Qazrin. Protogrumusol on basalt, 35°42'32"E-32°59'10"N. 350 m. 3.4.89, 44.008; 44.017.

***Trifolium salmoneum* Mouterde, Fl. Djebel Druze: 128 (1963)**

Golan: Nature Reserve (Bajuria). Grumusol and margins of a vernal pool, 35°39'30"E-32°54'30"N. 430 m. 3.4.89, 43.025.

***Trifolium scabrum* L., Sp. Pl.: 770 (1753)**

Samarian Desert: near Ma'ale Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.010; **Judean Mts:** Jerusalem, Givat Bet Hakerem, near Bet Hakerem. Dolomite outcrops, Veradim formation, Terra Rossa in karstic landscape, 35°11'30"E-31°46'00"N, 770 m. 24.03.1989, 13.020; **Kinnrot Valley (Upper Jordan Valley):** 2 km NE of Kibbutz Haon. Steep limestone and sandstone slopes, 35°38'30"E-32°44'00"N. (-)150 m. 2.4.89, 39.077.

***Trifolium scutatum* Boiss., Diagn. Pl. Orient. 2: 27 (1843)**

Upper Galilee: Near Ya'ara. Terra Rossa on hard limestone, maquis and clearings, 35°12'00"E-33°04'10"N. 200 m. 5.4.89, 53.042. **Golan:** Har Shipon. Volcanic ash, 35°45'50"E-33°04'17"N. 740 m. 4.4.89, 46.004.

***Trifolium spumosum* L., Sp. Pl.: 771 (1753)**

Philistine Plain: 1 km S of Ashdod. Stable sand dunes, 34°40'02"E-31°46'50"N, 20 m. 21.03.1989, 04.036.

***Trifolium stellatum* L., Sp. Pl.: 769 (1753)**

Judean Foothills: near Sedot Micha. Brown rendzina developing on nari crusts over Eocene chalk. Much of the area was burnt in summer 1988. *Ceratonia siliqua* - *Pistacia lentiscus* association, 34°54'43"E-31°43'25"N, 220 m. 21.03.1989, 02.040; **Judean Desert:** near Mishor Adumim. Stony slopes with nari crusts on Senonian chalk. Brown lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis brachyodon*, 35°19'20"E-31°48'10"N, 250 m. 22.03.1989, 05.086; **Samarian Desert:** near Ma'ale Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.006; **Judean Mts:** Jerusalem. near Ora.

Terraces on marly-chalk with poor vegetation of *Coridothymetum capitati*, 35°09'E-31°45'15"N, 780 m. 24.03.1989, 12.001.

***Trifolium subterraneum* L., Sp. Pl.: 767 (1753)**

Golan: Nature Reserve (Bajuria). Grumusol and margins of a vernal pool, 35°39'30"E-32°54'30"N. 430 m. 3.4.89, 43.008; **Upper Galilee:** Near Ya'ara. Terra Rossa on hard limestone, maquis and clearings, 35°12'00"E-33°04'10"N. 200 m. 5.4.89, 53.007.

***Trifolium suffocatum* L., Mant. Pl.: 276 (1771)**

Golan: Odem Forest, near Masaáda. Shallow soil on basalt, 35°45'15"E-33°13'00"N. 1010 m. 4.4.89, 48.019.

***Trifolium tomentosum* L., Sp. Pl.: 771 (1753) [*T. curvisepalum* Täckh.]**

Philistinean Plain: 11 km S of Ashkelon. Sandy soil developed on kurkar (calcareous sandstone). *Corydothymetum capitati*, 34°34'34"46"E-31°34'20"N, 70 m. 21.03.1989, 03.087; **Philistinean Plain:** 1 km S of Ashdod. Stable sand dunes, 34°40'02"E-31°46'50"N, 20 m. 21.03.1989, 04.032; **Samarian Desert:** near Maále Michmash. Deep clayey soil (dark brown grumusolic soil) and brown rendzina on limestone slopes, 35°05'30"E-31°52'50"N, 250 m. 23.03.1989, 08.011, 08.018; **Northern Negev:** 5 km N of Beer Sheva. Brown loessial lithosol, *Noaeetum mucronatae*, 34°47'00"E-31°18'30"N. 300 m. 26.03.1989, 15.023; **Northern Negev:** sands of Nahal Sekher, 15 km S of Beer Sheva. Loessial stable sandy soil, *Noaeetum mucronatae*, 34°49'20"E-31°06'00"N. 330 m. 26.03.1989, 16.034; **Kinnrot Valley (Upper Jordan Valley):** 2 km NE of Kibbutz Haon. Steep limestone and sandstone slopes, 35°38'30"E-32°44'00"N. (-)150 m. 2.4.89, 39.075.

***Trigonella arabica* Delile, Voy. Arabie Pétrée: 86 (1830)**

Lower Jordan Valley: 1 km NE of Pzael, 18 km N of Jericho. Salty or leached calcareous soil, 35°27'30"E-32°03'20"N, (-)270 m. 23.03.1989, 09.026; **Northern Negev:** 5 km N of Beer Sheva. Brown loessial lithosol, *Noaeetum mucronatae*, 34°47'00"E-31°18'30"N. 300 m. 26.03.1989, 15.020.

***Trigonella berythea* Boiss. & Blanche in Boiss., Diagn. Pl. Orient., ser. 2, 2: 10 (1856)**

Judean Mts: Kiryat Anavim. 10 km W of Jerusalem. Limestone hill, Terra Rossa, a Pine forest that was burnt 08/1987, 35°07'51"E-31°48'50"N. 750 m. 24.03.1989, 14.035; **Golan:** near the ancient synagogue of Qazrin. Protogrumusol on basalt, 35°42'32"E-32°59'10"N. 350 m. 3.4.89, 44.003; **Coastal Galilee:** coast of Rosh Haniqra. Hard calcareous sandstone (kurkar), gravels and sandy soil in the sea-spray zone, 35°05'07"E-33°05'30"N. 10 m. 5.4.89, 54.015.

Trigonella cylindracea Desv. in J. Bot. Agric. 3: 77 (1814)

Phillsteian Plain: 11 km S of Ashkelon. Sandy soil developed on kurkar (calcareous sandstone). *Corydotothymetum capitati*, 34°34'34"46"E-31°34'20"N, 70 m. 21.03.1989, 03.101.

Trigonella lilacina Boiss., Diagn. Pl. Orient. 9: 17 (1849)

Lower Galilee: 1 km N of Nazareth. Cultivated rendzina on Senonian chalk, 35°19'00"E-32°44'00"N. 400 m. 6.4.89, 55.005.

Trigonella monspeliaca L., Sp. Pl.: 777 (1753) [*Medicago monspeliaca* (L.) Trautv.]

Judean Foothills: near Sedot Micha. Brown rendzina developing on nari crusts over Eocene chalk. Much of the area was burnt in summer 1988. *Ceratonia siliqua* - *Pistacia lentiscus* association, 34°54'43"E-31°43'25"N, 220 m. 21.03.1989, 02.056; **Judean Desert:** near Mishor Adumim. Stony slopes with nari crusts on Senonian chalk. Brown lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis brachyodon*, 35°19'20"E-31°48'10"N, 250 m. 22.03.1989, 05.079; **Judean Mts:** Jerusalem, Givat Bet Hakerem, near Bet Hakerem. Dolomite outcrops, Veradim formation, Terra Rossa in karstic landscape, 35°11'30"E-31°46'00"N, 770 m. 24.03.1989, 13.021; **Judean Mts:** Kiryat Anavim. 10 km W of Jerusalem. Limestone hill, Terra Rossa, a Pine forest that was burnt 08/1987, 35°07'51"E-31°48'50"N. 750 m. 24.03.1989, 14.038; **Northern Negev:** 5 km N of Beer Sheva. Brown loessial lithosol, *Noaeetum mucronatae*, 34°47'00"E-31°18'30"N. 300 m. 26.03.1989, 15.025; **Kinnrot Valley (Upper Jordan Valley):** 2 km NE of Kibbutz Haon. Steep limestone and sandstone slopes, 35°38'30"E-32°44'00"N. (-)150 m. 2.4.89, 39.065; **Golan:** near the ancient synagogue of Qazrin. Protogrumusol on basalt, 35°42'32"E-32°59'10"N. 350 m. 3.4.89, 44.001; **Golan:** Har Shipon. Volcanic ash, 35°45'50"E-33°04'17"N. 740 m. 4.4.89, 46.007; **Mt. Hermon:** near the tomb and oak reserve of Sheikh Othman, 1 km E of Qalaat Namrud, 35°43'50"E-33°15'00"N. 800 m. 4.4.89, 51.024; **Coastal Carmel:** Atlit, coastal sands, salt marsh margins, and hard calcareous sandstone (kurkar), 34°56'00"E-32°42'20"N. 2-20 m. 6.4.89, 58.045.

An expanded circumscription of *Medicago*, based exclusively on floral characters, has been proposed by E. E. Small in several papers. The validation of names of *Trigonella* transferred to *Medicago* was effected by Small (in Willdenowia 16: 433-434. 1978). Although some doubts about the taxonomic appropriateness of this transfer have been expressed, it has been adopted by the editors of Med-Checklist. C. C. HEYN

Trigonella spinosa L., Sp. Pl.: 777 (1753)

Judean Mts: Kiryat Anavim. 10 km W of Jerusalem. Limestone hill, Terra Rossa, a Pine forest that was burnt 08/1987, 35°07'51"E-31°48'50"N. 750 m. 24.03.1989, 14.037.

Trigonella stellata Forsskål, Fl. Aegypt.-Arab.: 140 (1775)

Dead Sea Valley: near Mizpe Dragot, 15 km N of En Gedi. Slopes and small cliffs of dolomite and wadis, $35^{\circ}19'20"E-31^{\circ}35'15"N$, (-) 350 m. 22.03.1989, 06.027; **Dead Sea Valley:** near Ormat's solar ponds, 2 km N of the Dead Sea northern coast. Salty soil in wadis, $35^{\circ}30'31"E-31^{\circ}48'10"N$, (-)370 m. 22.03.1989, 07.012; **Lower Jordan Valley:** 1 km NE of Pzael, 18 km N of Jericho. Salty or leached calcareous soil, $35^{\circ}27'30"E-32^{\circ}03'20"N$, (-)270 m. 23.03.1989, 09.029; **Negev Highlands:** Makhtesh Ramon, Karnei Ramon. Basalt outcrops and a few other substrata, $34^{\circ}40'00"E-30^{\circ}30'20"N$. 770 m. 27.03.1989, 19.020.

Triplachne nitens (Guss.) Link, Hort. Berol. 2: 241 (1833)

Coastal Galilee: coast of Rosh Haniqra. Hard calcareous sandstone (kurkar), gravels and sandy soil in the sea-spray zone, $35^{\circ}05'07"E-33^{\circ}05'30"N$. 10 m. 5.4.89, 54.036.

Tripleurospermum auriculatum (Boiss.) Rech. fil., Fl. Lowland Iraq: 629 (1964)
[*Chamaemelum auriculatum* Boiss.]

Negev Highlands: Makhtesh Ramon, Karnei Ramon. Basalt outcrops and a few other substrata, $34^{\circ}40'00"E-30^{\circ}30'20"N$. 770 m. 27.03.1989, 19.017.

Tripodion tetraphyllum (L.) Fourr. in Ann. Soc. Linn. Lyon, ser. 2, 16: 359 (1868)
[*Anthyllis tetraphylla* L.; *Physanthalys tetraphylla* (L.) Boiss.]

Judean Mts: Kiryat Anavim. 10 km W of Jerusalem. Limestone hill, Terra Rossa, a Pine forest that was burnt 08/1987, $35^{\circ}07'51"E-31^{\circ}48'50"N$. 750 m. 24.03.1989, 14.008; **Kinnrot Valley (Upper Jordan Valley):** near En Sheva (Tabkha). South-facing limestone slope, $35^{\circ}32'20"E-32^{\circ}52'20"N$. (-)200 m. 3.4.89, 40.036; **Judean Foothills:** near Sedot Micha. Brown rendzina developing on nari crusts over Eocene chalk. Much of the area was burnt in summer 1988. *Ceratonia siliqua* - *Pistacia lentiscus* association, $34^{\circ}54'43"E-31^{\circ}43'25"N$, 220 m. 21.03.1989, 02.051.

Trisetaria linearis Forsskål, Fl. Aegypt.-Arab.: Ix, 27-28 (1775)

Negev Highlands: Yamin-Rotem Plain, 10 km SSE of Dimona. Stable sand covering sandstone, $35^{\circ}04'06"E-31^{\circ}01'00"N$. 330 m. 30.03.1989, 34.020.

Trisetaria macrochaeta (Boiss.) Maire in Bull. Soc. Hist. Nat. Afrique N. 33: 92 (1942)

Judean Desert: near Mishor Adumim. Stony slopes with nari crusts on Senonian chalk. Brown lithosol, semi-steppe batha of *Echinops polyceras* and *Phlomis brachyodon*, $35^{\circ}19'20"E-31^{\circ}48'10"N$, 250 m. 22.03.1989, 05.100; **Northern Negev:** 5 km N of Beer Sheva. Brown loessial lithosol, *Noaeetum mucronatae*, $34^{\circ}47'00"E-31^{\circ}18'30"N$. 300 m.

26.03.1989, 15.048; Negev Highlands: 2 km NW of Yerokham. Smooth-faced limestone outcrops and wadis, 34°54'30"E-31°00'05"N. 330 m. 26.03.1989, 17.026.

Triticum dicoccoides (Ascherson & Graebner) Aarons. in Verh. K. K. Zool.-Bot. Ges. Wien 59: 491 (1910)

Golan: 5 km E of Almagor. Pseudosavanna of *Ziziphus spina-christi* accompanied by annuals; protogrumusol on basalt, 35°39'30"E-32°54'30"N. (-)40 m. 3.4.89, 42.002.
