Additional finds of *Microbotryum violaceo-verrucosum* (*Ustilaginales*)

Abstract

Denchev, C. M.: Additional finds of *Microbotryum violaceo-verrucosum* (*Ustilaginales*). – Bocconeia 5: 849-852. 1997. – ISSN 1120-4060.

Microbotryum violaceo-verrucosum is reported as new to Spain (on *Silene nevadensis*), Serbia (on *S. bupleuroides*), Macedonia (on *S. gallinii*), Bulgaria, Greece and Turkey (on *S. italica*). *S. bupleuroides*, *S. gallinii* and *S. nevadensis* are new hosts for this smut fungus.

Introduction

Microbotryum violaceo-verrucosum (Brandenb. & Schwinn) Vánky is an anthericolous smut fungus found on *Silene* species. It is macroscopically identical with *M. violaceum* (Pers. : Pers.) G. Deml & Oberw., but the latter has a reticulate exospore.

Microbotryum violaceo-verrucosum has previously been reported only from Italy (Brandenburger & Schwinn 1974) and France (Durrieu 1972). Recently I found it in Austria, too (Denchev 1994). Revision of *Microbotryum* material from DAOM, M and SOM, and field studies in Bulgaria, brought to light additional finds of *Microbotryum violaceo-verrucosum*.

Material and methods

The material listed below was studied in lactophenol (heated to boiling, then cooled), by oil immersion at a magnification of 1250×. The measurements of ustilospores (N = 100) are given in the form (smallest observed-) mean ± standard deviation (-largest observed) (Denchev 1993).

Results

Microbotryum violaceo-verrucosum (Brandenb. & Schwinn) Vánky in Mycotaxon 33: 372. 1988 ≡ *Ustilago violaceo-verrucosa* Brandenb. & Schwinn in Nova Hedwigia 22:

883. 1974. – Type: Italy, Alassio, Vegliasco, on *Silene italica* (L.) Pers., 18 May 1969, W. Brandenburger & W. Brandenburger (HUV).

Sori in the anthers, powdery, dark purple, occasionally livid purple to livid vinaceous, or dark vinaceous (according to Rayner 1970). Ustilospores globose, subglobose, ovoid or broadly ellipsoidal, $5-10.5 \times 5-8 \mu\text{m}$, light brownish-violet; exospore verruculose, the warts c. $0.3-0.5 \mu\text{m}$ high.

Specimens examined

On *Silene bupleuroides* L. (matrix nova): Serbia, Raška, 23 Jun 1948, V. Lindtner (M; sub "Ustilago violacea", on "*S. longiflora*"; spores: $(5.5-) 6.8 \pm 0.6 (-9) \times (5.5-) 6.2 \pm 0.5 (-7.5) \mu\text{m}$).

On *Silene gallinnyi* Heuff. ex Rchb. (matrix nova): Macedonia, Mt Šar, inter urbem Tetovo et pagum Lisec, c.700 m s.m., 22 Aug 1948, B. Kitanov (SOM No. 20993-M; spores: $(5-) 5.9 \pm 0.7 (-8) \times (5-) 5.5 \pm 0.5 (-8) \mu\text{m}$).

On *Silene italica* (L.) Pers. subsp. *italica*: France, Var, Massif de Ste.-Baume, Vallée des Cèdres, 03 Jun 1959, E. Müller (M; sub "Ustilago violacea", on "*Saponaria ocymoides*"; spores: $(5.5-) 6.6 \pm 0.6 (-9) \times (5-) 6.2 \pm 0.5 (-7.5) \mu\text{m}$). Bulgaria, vallis Strumae, l.d. Kresnensko Defile, 07 May 1982, C. Denchev (SOM No. 21013-M; spores: $(5.5-) 6.3 \pm 0.5 (-8) \times (5-) 5.9 \pm 0.5 (-6.5) \mu\text{m}$). Bulgaria, Mt Pirin, prope refugium Sinanica, c.

1050 m s.m., 30 May 1992, *C. Denchev*, (SOM No. 21012-M; spores: (5.5-) 7.5 ± 0.9 (-10.5) × (5.5-) 6.6 ± 0.9 (-8) µm – Fig. 1). Greece, Nomos Grevenon, Eparhia Grevenon, Mt Smolikas, 1-2 km S of Samarina, c. 1400 m s.m., 28 Jun 1976, *P. Hartwig*, *C. Baden & S. G. Christiansen* (SOM No. 21010-M; spores: (5-) 6.4 ± 0.5 (-8) × (5-) 5.8 ± 0.5 (-6.5) µm). European Turkey, Losengrad, 7 Nov 1912, *I. Nejčev* (SOM No. 21009-M; spores: (5.5-) 6.3 ± 0.5 (-8) × (5-) 5.8 ± 0.5 (-7) µm).

On *Silene nevadensis* (Boiss.) Boiss. (matrix nova): Spain, Provincia de Granada, Capileira in clivo herbido australi, c. 1700 m s.m., 18 Jun 1952, *H. Roivainen* (DAOM No. 134268; sub "Ustilago violacea"; spores: (5.5-) 6.0 ± 0.4 (-8) × (5-) 5.7 ± 0.4 (-6.5) µm – Fig. 2).

Acknowledgements

I am grateful to the Directors and Curators of DAOM and M for the loans of *Microbotryum* material.
