## ***Bellevalia dubia* subsp. *dubia* (*Hyacinthaceae*), an endemic unit for the Sicilian flora**

### **Abstract**

Borzatti de Loewenstein, A., & Garbari, F.: *Bellevalia dubia* subsp. *dubia* (*Hyacinthaceae*), an endemic unit for the Sicilian flora. — *Bocconeia* 16(2): 543-548. 2003. — ISSN 1120-4060.

*Bellevalia dubia* (Guss.) Kunth is an uncommon geophyte of the arid and uncultivated grounds of Central Eastern Mediterranean area, with three subspecific units: *Bellevalia dubia* (Guss.) Kunth subsp. *dubia* (Southern Italy, Sicily and Dalmatia), *B. dubia* subsp. *boissieri* (Freyn) Feinbr. (Greece, Turkey and Eastern Mediterranean coasts) and *B. dubia* subsp. *hackelii* (Freyn) Feinbr. (Portugal).

Biosystematic investigations on *Bellevalia* populations from Calabria and Sicily, carried out in Pisa Botanic Gardens, evidenced considerable differences among them. Only the Sicilian populations agree with the original description of *Bellevalia dubia*; on the contrary, the Calabrian plants look similar to *Bellevalia dubia* subsp. *boissieri*.

Accordingly, *Bellevalia dubia* subsp. *dubia* (Lectotype in NAP!) is to be considered as a Sicilian endemic unit.

### **Introduction**

*Hyacinthus dubius* was published by Gussone (1821) in his *Catalogus Plantarum* for Sicily. The specific combination, under the genus *Bellevalia* Lapeyr., as *B. dubia* is sometimes uncorrectly ascribed to H. G. L. Reichenbach (1830) or to J. J. Roemer & J. H. Schultes (1829), but the former author - to whom the latter ones refer - considered, naming the plant, a specimen collected "In Ligurien bei Pontremoli" where only *Bellevalia webbiana* Parl. is recorded. The combination *Bellevalia dubia* (Guss.) Kunth was correctly published by Kunth (1843) in his *Enumeratio Plantarum* where the basionym and some Sicilian localities were mentioned. Feinbrun (1940) in her revision of the genus *Bellevalia* considered three subspecies for *Bellevalia dubia*: *B. dubia* subsp. *dubia* from southern Italy, *B. dubia* subsp. *hackelii* from Portugal and *B. dubia* subsp. *boissieri* from Balkan peninsula, Greece and Eastern Mediterranean area. Considerable differences among Italian populations from Calabria and Sicily beared the present authors to identify as *Bellevalia dubia* subsp. *dubia* only the Sicilian populations while the Calabrian ones look similar to *Bellevalia dubia* subsp. *boissieri*. Accordingly *Bellevalia dubia* (Guss.) Kunth subsp. *dubia* is to be considered as an endemic unit for Sicily.

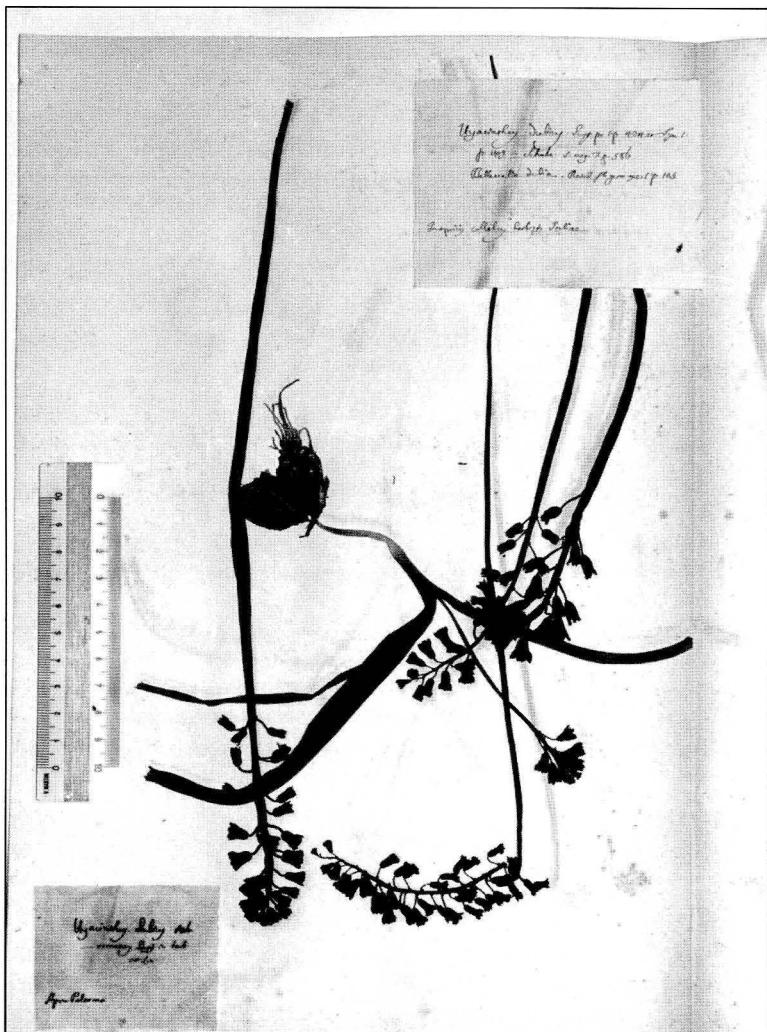

Fig. 1. The herbarium sheet of Gussone's general collection (NAP) here designated as lectotype.

#### Typification

*Bellevalia dubia* (Guss.) Kunth, Enum. pl. 4: 308. 1843.

Basion.: *Hyacinthus dubius* Guss., Cat. H. Reg. Boccadif., pp. 32, 78. 1821.

Lectotype: *Hyacinthus dubius* Nob. - *Hyacinthus romanus* Desf. in herb. non Lin. Apr.-Palermo [manu Gussone] (NAP!), designated here.

The sheet selected (Fig. 1) is located in the General Herbarium of Gussone in NAP and not in the "Sicilian Herbarium" of Gussone where seven sheets are present but none of them can be eligible or adequately considered for the typification process. Our choice is

Table 1.

|                 | <i>B. dubia</i> subsp. <i>dubia</i> | <i>B. dubia</i> subsp. <i>boissieri</i> |
|-----------------|-------------------------------------|---|
| Perigone length | $\leq 1$ cm                         | $\geq 1$ cm                             |
| Perigone colour | light sky blue                      | dark blue                               |
| Capsule         | ovate-emarginate                    | obovate-truncate                        |
| Raceme length   | down to half scape                  | up to half scape                        |
| Raceme density  | high                                | low                                     |
| Size            | 20-30 cm                            | 30-50 cm                                |

due to the collecting locality (Palermo), mentioned in the protologue, and to the good conservation state of the specimens: a complete plant with a sectioned bulb and four flowered scapes. They match very well with the diagnosis. The sheet bears two labels with Gussone's handwriting, the upper one with some references (Supp. pr. 1 p. 424 et Syn. 1 p. 409 = Schulte. s. veg. 7 p. 586 - *Bellevalia dubia* Reichenb. fl. germ. exc. 1 p. 105) and a synthetic description of habitat (*In apricis collibus herbosis Italiae*), the lower one (Fig. 2) with the name of the plant, season (April) and collecting locality (Palermo).

#### Diagnostic characters

The main important morphological characters which allow to distinguish *B. dubia* subsp. *dubia* from *B. dubia* subsp. *boissieri* are: the light sky blue colour of flowers (Fig. 3), the length of the scape (20-30 cm), the density of the inflorescence, the raceme/scape length ratio and the emarginate shape of the capsules (Table 1).

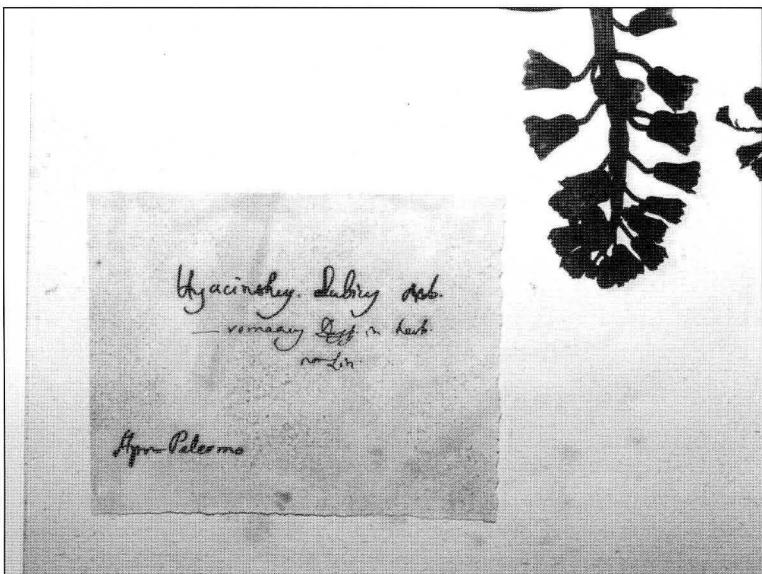

Fig. 2. The label with Gussone's handwriting showing the name of the plant, season (April) and collecting locality (Palermo).

Fig. 3. Flowered scape of *B. dubia* subsp. *dubia* (up on the left) and entire plant, with flowers and capsules of *B. dubia* subsp. *boissieri* (close-up). The original illustration (by A. Maury, Florence) is based on material from Sicily (063/1987) and Calabria (625-2/2000) respectively, cultivated in the Pisa Botanic Gardens.

### Karyological observations

The investigated plants, cultivated in the Pisa Botanic Gardens (acc. numb. 1987/056; 1987/063), are diploid,  $2n=8$ . The karyotype, according to the records presented by Garbari (1968) and Bareka & al. (2000), does not show remarkable differences among Sicilian *Bellevalia dubia* subsp. *dubia* and Calabrian and Greek *Bellevalia dubia* subsp. *boissieri* (Kapasa & al. 2001).

### Distribution and conclusions

Up to now *B. dubia* subsp. *dubia* pertains only to Sicily, including the Favignana Isle: rocky hillsides and pastures near Palermo, Taormina, Agrigento, Caltanissetta and Madonie mountains.

*B. dubia* subsp. *boissieri* is effectively recorded, in peninsular Italy, only for Calabria (Borzatti de Loewenstein & Garbari 2002).
