## Caucasus and Alps a floristical comparison

### Abstract

Hübl, E.: Caucasus and Alps a floristical comparison. — Boccone 29: 121-156. 2021 — ISSN: 1120-4060 printed, 2280-3882 online.

Caucasus and Alps are the highest moutains which pass through Western Eurasia. In this area they are the only mountains with glaciers. Both mountain ranges were glaciated in the glacial period. Glaciers are still existing. Around the Alps on places of former glaciers lakes often determine the aspect of the landscape. The glaciers of the Caucasus did not reach the foreland. Therefore, there are no lakes. The role of conifers is minor in Caucasus. The subalpine zone, which is often specified by *Pinus mugo* in the Eastern Alps, is more or less specified by *Betula* in the Caucasus. But there are also many floristic differences, which are not so evident. The article shows some differences by comparison of the two families *Ericaceae* and *Caryophyllaceae*.

*Key words:* Caucasus, Alps, floristical, comparison, *Ericaceae*, *Caryophyllaceae*

### Introduction

The vegetation of Caucasus and Alps was compared by different authors, for instance Ozenda (1988) and Nakhutsrishvili (2013). This article tries to compare two plant families, which play an important role in both mountain ranges.

Caucasus and Alps are the highest mountains which pass through Western Eurasia (Fig. 1). In this area they are the only mountains with glaciers. The Great Caucasus runs from NW to SE. It is situated beween the Black Sea in the W and the Caspian Sea in the E (about 38°35'N and between 36°37' and 50°22'E). The Great Caucasus is situated about between 39° and 50° Eastern length. The Caucasus can be subdivided into the plain in the North, the Great Caucasus, the Transcaucasian Depression, the Small Caucasus and the Talish Mountains. In the Great Caucasus there are the highest and glaciated mountains (Elbrus 5650 m, Kazbek 5633 m). The highest mountain in the Alps is Mount Blanc (4810 m). The Alps run from the Mediterranean Sea in the SW to the Western border of the Hungarian Plain in NE. The Alps extend from SW to East about 5° and 15° Eastern length and about 43° and 48° Northern latitude. In the SW and the S and also at the Eastern border they are influenced by the Mediterranean climate.

Both mountain ranges were glaciated in the glacial period. Glaciers are still existing. Around the Alps on places of former glaciers lakes often determine the aspect of the landscape. The glaciers of the Caucasus did not reach the foreland. Therefore, there are no lakes. Vegetation and flora are similar in both mountain ranges, but some differences are evident. The role of conifers is minor in Caucasus. The subalpine zone, which is often specified by *Pinus mugo* in the Eastern Alps, is more or less specified by *Betula* in the Caucasus. But there are also many floristic differences, which are not so evident. I try to show some differences by comparison of the two families *Ericaceae* and *Caryophyllaceae*.

In Caucasus, among the *Ericaceae*, *Rhododendron* is more developed than in the Alps. In the Alps *Rhododendron* is only subalpine spread, which corresponds to *Rhododendron caucasicum* in the Caucasus. The other *Rhododendron* species of the Caucasus grow in the underwood of forests from hill up to subalpine zone. *Rhodothamnus chamaecistus* is an endemic plant of the Eastern Alps.

Of the genus *Erica* only the Mediterranean species *Erica arborea* grows at the coast near Caucasus. Of the four species growing in the Alps, *Erica carnea* is the most important, because it is growing in the most parts of the Alps and determines the aspect of pine forests on limestone.

A near relative of the alpine *Arctostaphylos uva-ursi* is growing in the Caucasus (*Arctostaphylos caucasica*).

In the genus *Vaccinium* the Caucasian *Vaccinium artostaphylos* differs from the other species, because it grows up to 6 m maximum.

*Calluna vulgaris* often determines the aspect on acid soil in the Alps, but is missing in the Caucasus.

The *Caryophyllaceae* are an extensive family with many common genera. There are many common *Stellaria* species. Among the genus *Stellaria* there are also forest species. For instance *Stellaria holostea* and *Stellaria nemorum* are growing in forest of both mountain ranges.

Among the extensive genus *Cerastium* there are many species common to both mountain ranges. The snowbed species *Cerastium cerastoides* is interesting, because it is an arctic alpine plant, which also grows in the Caucasus. The artic alpine plants are rare in the Caucasus.

In the genus *Sagina*, *Sagina saginoides* is an alpine arctic plant, which grows in Caucasus and Alps.

In the genus *Minuartia*, some species reach subalpine or alpine zone in both mountain ranges, one of these is *Minuartia verna* (in the Alps subsp. *verna*).

Among the genus *Arenaria*, different species reach the alpine zone in Caucasus as well as in the Alps.

In the genus *Moehringia* there are many species in the Alps, but only one in Caucasus and Alps (*Moehringia trinervia* in shady forests).

*Silene* is a very extensive genus, with many species in the Caucasus and in the Alps, which reach the alpine zone in both mountain ranges, for instance *Silene suecica* in the Alps and *S. alpicola* in Caucasus.

The genus *Gypsophila* is main developed in Caucasus.

*Dianthus* is an important genus for both mountain ranges. There are only two species common to both mountain ranges (*Dianthus armeria* and *D. barbatus*).

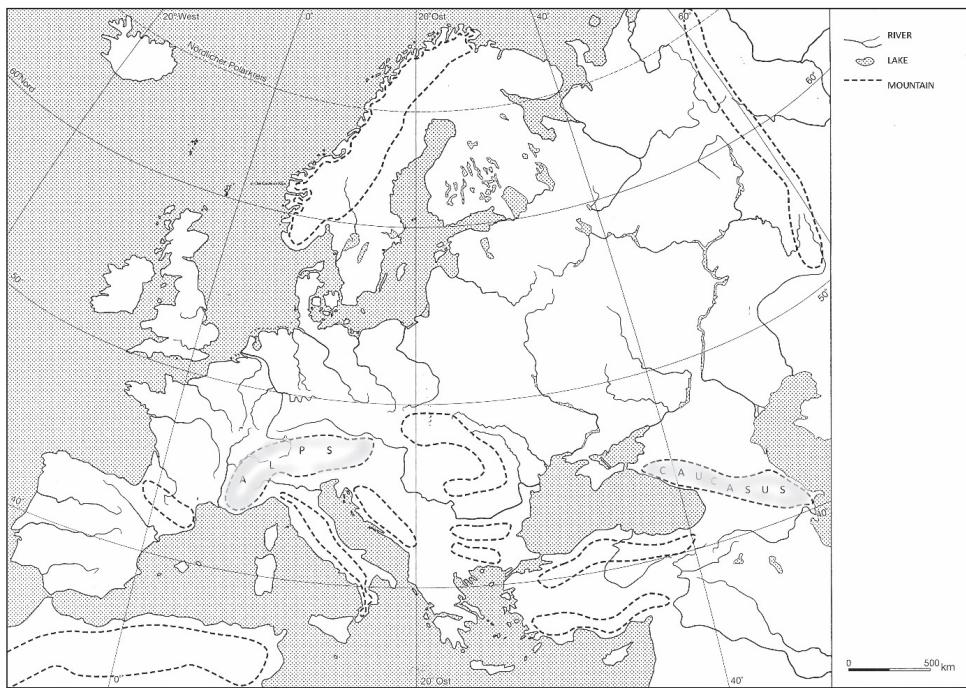

Fig. 1. Map of Europe with Alps and Caucasus.

## Materials and Methods

The information of the flora of both mountain ranges is collected from Gagnidze (2005), Sernov (2006), Pils (2006), Holubec & Krivka (2006), Gabrielian & Fragman-Sapir (2008), Solomon & al. (2014), Aeschimann & al. (2004). The information about genera is taken from Mabberley (2008).

In order to be able to compare the habitats Pils (2006) is quoted, because the list of the Caucasian plants is not complete. The “Vascular Plants of Georgia” (Gagnidze 2005) contain only the names of the plants, but no further informations. In contrast to the list of the plants in the Alps is more or less complete by using “Flora alpina” (Aeschimann & al. 2004). In the taxonomic review, for each genus, the overall number of specific and subspecific taxa is reported.

## Taxonomic review

### ERICACEAE

*ERICACEAE* JUSS. (incl. *Empetraceae*, *Epicridaceae*, *Monotropaceae*, *Pyrolaceae*) – Ericales 117/2850: Cosmop. exc. deserts, usually montane in tropics.

**Rhododendron** L. (incl. *Ledum*): ca. 1100 temp. N hemisph. (Eur. 7, China 650 esp. Himalaya; SE As. + Mal. mts (155 endemic in NG), Aus (2)

In the Caucasus only	In the Alps only	In the Alps and Caucasus
<b>Rhododendron smirnowii</b> Trautv. ex Regel Cauc.: open forests on hills and mountains to 1200 m	<b>Rhododendron tomentosum</b> Harmaja (= <i>Ledum palustre</i> L.) (eastern part of E Alps only introduced; extinct)	<b>Rhododendron luteum</b> Sweet. ( <i>Luzulo-Fagion</i> ; hill in SE Alps in question if it is indigenous; Cauc./E-Eur.) Cauc.: in the underwood of deciduous forests; up to the alpine zone (Pils: 400-2000 m, forest mountain pastures N)
<b>Rhododendron ungerii</b> Trautv. Cauc.: open deciduous forests from hills to subalpine zone, 700-1700 m	<b>Rhododendron ferrugineum</b> L. ( <i>Piceion excelsae</i> ; subalpine, alpine; acidophile Alps S-Eur.-Mont.)	
<b>Rhododendron ponticum</b> L. Cauc.: in the underwood of deciduous forests; from lowland to subalpine zone, up to 2000 m (Pils: ( <i>Rh. ponticum</i> subsp. <i>ponticum</i> ) <1800 m, humid forests; N)	<b>Rhododendron hirsutum</b> L. ( <i>Rhododendro hirsutum</i> - <i>Pinenion mugo</i> ; subalpine; calciphile; central and E-Alps; E.-Alp.)	
<b>Rhododendron caucasicum</b> Pall. Cauc.: in subalpine meadows; from open forests around treeline to upper alpine zone, 1600-3000 m (Pils: 2000-3000 m, acid tundra; NE)		

**Rhodothamnus** Reichb.: only 2 (1 in the Alps, 1 in NE Turkey)

In the Caucasus only	In the Alps only	In the Alps and Caucasus
	<b>Rhodothamnus chamaecistus</b> (L.) Rchb. ( <i>Ericion carneae</i> ; subalpine, alpine; E Alps E-Alps) (endemic)	

**Loiseleuria** Desv. = *Kalmia* L. (incl. *Leiophyllum*, *Loiseleuria*)

*Kalmia* L. (incl. *Leiophyllum*, *Loiseleuria*, 1 circumpolar (*K. procumbens* L.): 10 N America (2 natur. Europe), Cuba

In the Caucasus only	In the Alps only	In the Alps and Caucasus
	<b><i>Kalmia</i> (<i>Loiseleuria</i>) <i>procumbens</i></b> (L.) Desv. ( <i>Loiseleurio-Vaccinion</i> , subalpine, alpine; Alps; Eurosib./N-Am)	

**Erica** L.: 860 (South Africa 770, SW Cape 658 [635 endemic]; Madagascar; Mediterranean, Macaronesia)

In the Caucasus only	In the Alps only	In the Alps and Caucasus
	<b><i>Erica cinerea</i></b> L. ( <i>Calluno-Ulicetea</i> ; hill, mountain; SW Alps W-Eur./Medit.)	<b><i>Erica arborea</i></b> L. ( <i>Ericion arboreae</i> ; hill; S/SW-Alps Medit.) Cauc.: near coast in Caucasus (Pils: <900 m; maquis in Turkey; not SS)
	<b><i>Erica carnea</i></b> L. ( <i>Erico-Pinetaea</i> , mountain, subalpine; most parts of the Alps except parts of SW; S-Eur.-Mont.)	
	<b><i>Erica scoparia</i></b> L. ( <i>Cisto-Lavanduletea</i> ; hill; SW only; Medit.)	
	<b><i>Erica tetralix</i></b> L. ( <i>Oxycocco-Sphagnetea</i> ; mountain; Central Alps; W.-Eur.)	

*Epigaea* L.: 3 (Asia)

In the Caucasus only	In the Alps only	In the Alps and Caucasus
<i>Epigaea gaultherioides</i> (Boiss.) Takht.; Caucasus and Eastern Asia Minor		

*Arbutus* L.: 10 in Western North America; 2 in W Eur. to Medit.

In the Caucasus only	In the Alps only	In the Alps and Caucasus
<i>Arbutus andrachne</i> L. Near the coast in Caucasus (Pils: < 800 m, maquis, forests)	<i>Arbutus unedo</i> L. ( <i>Pistacio lentisci-Rhamnetea</i> <i>alaterni</i> ; hill most south western parts only; Medit.) (Pils: <300 m; maquis in Turkey)	

*Arctostaphylos* Adans.: about 60 in Western N-Am.; 2 circumpolar; 2 in Eur.

In the Caucasus only	In the Alps only	In the Alps and Caucasus
<i>Arctostaphylos caucasica</i> ( <i>Kvaratzchelia</i> ) Lipsch. ( <i>A.</i> <i>uva-ursi</i> (L.) Spreng. subsp. <i>caucasica</i> ) Cauc.: in subalpine shrub	<i>Arctostaphylos uva-ursi</i> (L.) Spreng. ( <i>Juniperion nanae</i> ; moun- tain, subalpine, alpine, Alps; Eurosib./N-Am.)	
	<i>Arctostaphylos alpina</i> (L.) Spreng. ( <i>Loiseleurio-Vaccinion</i> sub- alpine, alpine; Alps except most south western parts Arct.-Alp.)	

**Vaccinium** L.: about 140; 4 circumpolar + N temp. (Eur. 8, Japan 22, N-Am. 65) + Central and Southeastern African mountains + Madagascar 6, trop. Am. 30 heterogeneous?

In the Caucasus only	In the Alps only	In the Alps and Caucasus
<b>Vaccinium arctostaphylos</b> L. In deciduous forests and in Cauc. subalpine shrub (Pils: <1830 m, humid forests; N)	<b>Vaccinium oxycoccus</b> L. ( <i>Sphagnion medi</i> ; hill, mountain; absent in SW Alps; Eurosib./N-Am.)	<b>Vaccinium vitis idea</b> L. ( <i>Vaccinio-</i> <i>Piceetea-excelsae</i> ; mountain, subalpi- ne, alpine, Alps; Eurosib./N-Am.) Cauc.: subalpine scrub (Pils: subalpine scrub; NE r)
	<b>Vaccinium microcarpum</b> (Rupr.) Schmalh. ( <i>Oycocco-Empetron-her-</i> <i>maphrodit</i> ; mountain, sub- alpine; absent in south western parts of the Alps; Eurosib./N-Am.)	<b>Vaccinium myrtillus</b> L. (Pils: 1280-2700 m, acid scrub N) ( <i>Vacinio-Piceetea excelsae</i> ; mountain, subalpine, alpine, Alps; Eurosib.) Cauc.: subalpine scrub Pils: 1280-2700 m, acid scrub; N
	<b>Vaccinium gaultherioides</b> Bigelow ( <i>Loiseleurio-</i> <i>Vaccinietea</i> ; subalpine, alpi- ne; Alps; Arct.-Alp.)	<b>Vaccinium uliginosum</b> L. ( <i>Oxycocco-</i> <i>Sphagnetea</i> ; hill, mountain; Alps Eurosib./N-Am.) (Pils: 1200-3000 m; damp acid tundra, NW, NE)

**Andromeda** L.: 1-2 N temp. (Eur. 1)

In the Caucasus only	In the Alps only	In the Alps and Caucasus
	<b>Andromeda polifolia</b> L. ( <i>Oxycocco-Sphagnetea</i> ; mountain, subalpine; absent in south western Alps; Eurosib/N-Am.)

In the Caucasus only	In the Alps only	In the Alps and Caucasus
	<b>Calluna vulgaris</b> (L.) Hull ( <i>Juniperion nanae</i> ; moun- tain, subalpine, alpine; Alps (Pils: 100-1000 m; acid scrub; NW, NE)	

***Empetrum*** L.: 2 N temp. (Eur. 1 + Arctic; S-Andes, Falkland Is., Tristan da Cunha Is.)

In the Caucasus only	In the Alps only	In the Alps and Caucasus
	<b><i>Empetrum nigrum</i></b> subsp. <b><i>nigrum</i></b> L. ( <i>Ocycocco-Sphagnetea</i> ; mountain, subalpine; NE Alps mostly; Eurosib.)	
	<b><i>Empetrum nigrum</i></b> subsp. <b><i>hermaphroditum</i></b> (Hagerup) Böcher ( <i>Rhododendro-Vaccinietalia</i> ; subalpine, alpine; Alps; absent most north eastern part; Eurosib./N-Am.)	

***Pyrola*** L.: 35 North hemisph. (Eur. 7 to Sumatra, temp. S-America)

In the Caucasus only	In the Alps only	In the Alps and Caucasus
		<b><i>Pyrola minor</i></b> L. ( <i>Piceion-excelsae</i> ; subalpine; Alps; Eurosib./N-Am.) Cauc.: in shady forests and subalpine coppices (Pils: 1650-2300 m; forests, NW, NN scat.)
		<b><i>Pyrola media</i></b> Sw. ( <i>Piceion excelsae</i> ; subalpine; Alps absent in south western part, Eurosib.) Cauc.: in shady forests and subalpine coppices
		<b><i>Pyrola chlorantha</i></b> Sw. ( <i>Erico-Pinetea</i> mountain, subalpine; Alps; Eurosib./N-Am) Cauc.: in shady forests and subalpine coppices (Pils: 1200-2100 m, forests)
		<b><i>Pyrola rotundifolia</i></b> L. ( <i>Vaccinio-Piceetea excelsae</i> ; subalpine Alps Eurosib./N-Am.) Cauc.: in shady forests and subalpine coppices (Pils: 1350-2100 m, forests; NN, NE scat.)

***Orthilia*** Ruf.: 1 circumboreal

In the Caucasus only	In the Alps only	In the Alps and Caucasus
		<b><i>Orthilia secunda</i></b> (L.) House ( <i>Piceetalia excelsae</i> ; mountain, subalpine; Alps; Eurosib./N-Am.) Cauc.: in shady forests and subalpine coppices (Pils: 1000-2300 m; forests N (-C) scat.)

***Moneses*** Salisb. ex Gray.: 2 cool N temp.

In the Caucasus only	In the Alps only	In the Alps and Caucasus
		<b><i>Moneses uniflora</i></b> (L.) A. Gray ( <i>Piceion excelsae</i> ; mountain, subalpine; Alps; Eurosib./N-Am.) Cauc.: in shady forests; mountain to subalpine (Pils: 1500-2000 m, forests, NW,NN(-C) r)

***Chimaphila*** Pursh.: 5 Euras. Eur. 1 N & trop. America

In the Caucasus only	In the Alps only	In the Alps and Caucasus
	<b><i>Chimaphila umbellata</i></b> (L.) W. Barton ( <i>Dicran-Pinion</i> ; hill; most eastern parts of the Alps; Eurosib./N-Am.)	

***Monotropa*** (*Hypopitys*): 2 N temp.

In the Caucasus only	In the Alps only	In the Alps and Caucasus
	<b><i>Monotropa hypophegea</i></b> Wallr. ( <i>Quercetea robori-sessiliflorae</i> ; hill, mountain; most parts of the Alps; Eurosib./N-Am.)	<b><i>Monotropa hypopitys</i></b> L. ( <i>Hypopitys monotropa</i> ) ( <i>Piceion excelsae</i> ; hill, mountain, subalpine; Alps; Eurosib./N-Am.); Cauc.: in shady forests (Pils: 450-1800 m, forests)

**CARYOPHYLLACEAE**

*CARYOPHYLLACEAE* JUSS. Magnoliopsida – Carophyllales. 85/2630: Cosmop. esp. Temp. & warm N-hemisph.

*Stellaria* L.: ca. 120 cosmop. (Eur. 18, n-Am. 29 incl. 1 introduced)

In the Caucasus only	In the Alps only	In the Caucasus and Alps
<i>Stellaria persica</i> Boiss. Cauc.: in moist subalpine meadows, on banks of brooks (Pils: 1500-2800 m; moist; NE-SE scat.)	<i>Stellaria pallida</i> (Dumort.) Crép. ( <i>Sisymbrietalia</i> ; hill, mountain; Alps; Medit.)	<i>Stellaria media</i> (L.) Vill. [ <i>Stellarietea mediae</i> ; hill, mountain; Alps; Medit. (-Cosmop.)] Cauc.: ruderal plant (Pils:<2100 m)
<i>Stellaria anagalloides</i> C. A. Mey. ex Rupr. Cauc.: in moist subalpine meadows, on banks of brooks	<i>Stellaria palustris</i> Hoffm. ( <i>Caricetalia fuscae</i> ; hill, mountain, subalpine; mostly S Alps; Eurosib.)	<i>Stellaria neglecta</i> Weihe ( <i>Geo-Alliarion</i> ; hill; Alps; S-Eur./W-Asiat.)
	<i>Stellaria alsine</i> Grimm (= <i>S. uliginosa</i> ) ( <i>Montio-Cardaminetea</i> ; hill, mountain; Alps; Eurosib/N-Am.)	<i>Stellaria holostea</i> L. ( <i>Carpinion betuli</i> ; hill, mountain; SW-S- E-Alps; Eur./W-Asiat.) Cauc.: in shady and light forests (Pils: <1600 m; forests,N)
	<i>Stellaria longifolia</i> Willd. (= <i>S. diffusa</i> ) ( <i>Vaccinio-Piceetea excelsae</i> ; subalpine; central and E-Alps; Eurosib.)	<i>Stellaria nemorum</i> L. ( <i>Fraxinetalia</i> ; mountain, subalpine; Alps; Eur.) Cauc.: in shady forests and in moist mountain meadows (Pils: moist; shady forests; NE r)
	<i>Stellaria nemorum</i> subsp. <i>nemorum</i> L. ( <i>Fraxinetalia</i> ; mountain, subalpine; Alps; Eur.)	<i>Stellaria graminea</i> L. ( <i>Molinio-Arrhenatheretea</i> ; hill, mountain; Alps; Eurasiat.) Cauc.: mountain meadows and edges of forests (Pils: 300-2000 m meadows, NW, NE r)
	<i>Stellaria nemorum</i> subsp. <i>montana</i> (Pierat) Berher in Louis ( <i>Epilobion angustifolii</i> ; hill, mountain; SW to the SE parts of the Alps; W.-Eur.)	

***Pseudostellaria*** Pax.: 21 Eur. (1) & C As., Afghanistan to Jap. & N Am. (3)

In the Caucasus only	In the Alps only	In the Caucasus and Alps
	<b><i>Pseudostellaria europaea</i></b> Schaeftl. ( <i>Fraxinetalia</i> ; hill; southern parts of E Alps and parts of S Alps; E-Alp./Illyr.)

<i>Dianthus imereticus</i> (Rupr.) Schischk. (endemic) (= <i>D. montanus</i> Bieb.)	<i>Dianthus glacialis</i> Haenke ( <i>Carici-Kobresietea</i> ; alpine; E Alps except most northern and southern parts; E-Alp./Carpat.)	
<i>Dianthus abchasicus</i> Gvinianidze (endemic)	<i>Dianthus pavonius</i> Tausch ( <i>Caricetalia curvulae</i> ; subalpine, alpine; W Alps; W-Alp.)	
<i>Dianthus charadzeae</i> Gagnidze & Gviniashvili (endemic)	<i>Dianthus gratianopolitanus</i> Vill. ( <i>Seslerio-Xerobromion</i> ; hill, mountain; W Alps except southern parts; Eur.)	
<i>Dianthus inamoenus</i> Schischk. (endemic)	<i>Dianthus sylvestris</i> subsp. <i>sylvestris</i> Wulfen in Jacq. ( <i>Sedo-Sleranthesia</i> ; hill, mountain, subalpine Alps except most eastern parts; S-Eur.-Mont.)	
<i>Dianthus azkurensis</i> Sosn. (endemic)	<i>Dianthus sylvestris</i> subsp. <i>longicaulis</i> (Ten.) Greuter & Burdet ( <i>Festuco-Brometea</i> ; hill; Western and southwestern parts of W Alps; Medit.-Mont.)	
<i>Dianthus floribundus</i> Boiss.	<i>Dianthus caryophyllus</i> L. (hill, mountain; S-Eur.)	
<i>Dianthus multicaulis</i> Boiss. & Huet (Pils: 2000-3900 m; rocky; NE, EE)	<i>Dianthus subacaulis</i> Vill. ( <i>Avernion sempervirentis</i> ; mountain, subalpine; Western parts of W Alps; W-Alp.)	
<i>Dianthus daghestanicus</i> Charadze (endemic)	<i>Dianthus scaber</i> Chaix. ( <i>Festuco-Brometea</i> ; hill, mountain; western parts of W Alps; W-Alp./Pyr.)	
<i>Dianthus crinitus</i> Smith (Pils: 50-2600 m; steppe; NE, SS)	<i>Dianthus plumarius</i> L. ( <i>Festucetalia valesiacae</i> ; hill, mountain, subalpine; eastern parts of E Alps; E-Alp./Carpat.)	
<i>Dianthus orientalis</i> Smith (Pils: 50-3160 m; rocky; NE-SE, SS)	<i>Dianthus superbus</i> subsp. <i>superbus</i> L. ( <i>Molinion</i> ; hill; Alps except some parts in the south; Eurosib.)	

<i>Dianthus ketzhovelii</i> Makaschvili	<i>Dianthus superbus</i> subsp. <i>alpestris</i> Celak. ( <i>Caricion Ferrugineae</i> ; subalpine; Alps except some parts in SW, NE and SE; S-Eur.-Mont.)	
<i>Dianthus cyri</i> Fisch. & C. A. Mey.	<i>Dianthus deltoides</i> L. ( <i>Koelerio-Phleion</i> ; hill, mountain; Alps except some parts in the eastern W Alps and northern and southern E Alps; Eurosib.)	

***Saponaria* L.: 40 temp. Euras. (Eur. 10)**

In the Caucasus only	In the Alps only	In the Caucasus and Alps
<i>Saponaria glutinosa</i> Bieb. Cauc.: on grassy and rocky slopes, in dry and open forests [Pils: 900-1700 m; rocky; 	<i>Saponaria lutea</i> L. ( <i>Elyno-Seslerietea</i> ; subalpine, alpi- ne; southeastern parts of W Alps, W- Alp.)	<i>Saponaria officinalis</i> L. ( <i>Convolvulion sepium</i> ; hill, moun- tain; Alps except some small parts in the north; Eur./W-Asiat.) Cauc.: on dry slopes and waysides [Pils: <1100 m; semiruderal; N(-C, SS)]
<i>Saponaria prostrata</i> Willd. (Pils: 320-1500 m; fields; stony slopes etc; not SE)	<i>Saponaria pumila</i> Janch. ( <i>Caricetalia curvulae</i> ; alpine; Alps except most southern and northern parts; E-Alp.-Carpat.) (Pils: ( <i>Saponaria pumilio</i> ) 1800- 2400 m; rocky tundra; SW, SS)	
<i>Saponaria cerastoides</i> Fisch. ex C. A. Mey.	<i>Saponaria ocymoides</i> L. ( <i>Pyrolo- Pinetea</i> ; hill, mountain, subalpine; Alps except eastern part of E Alps; S-Eur.-Mont.)	
<i>Saponaria orientalis</i> L.		

***Velezia* L.: 6 Medit. (Eur. 2) to Afghanistan**

In the Caucasus only	In the Alps only	In the Caucasus and Alps
		<i>Velezia rigida</i> L. ( <i>Thero-Brachypodion</i> ; hill, most western parts of W Alps; Medit./W- Asiat.) Cauc.: on gravely slopes (Pils: <2000 m; stony; not SE)

## Conclusions

In both mountain ranges there are almost all the same plant families and also many orders. Even many species are in common. For examples the families *Ericaceae* and *Caryophyllaceae* where chosen, because they are important families in the Caucasus as well as in the Alps.

Of the specific and subspecific taxa attributed to the two families examined – a total of 397 – 143 occur only in the Caucasus, 181 only in the Alps. The taxa common to the two great mountain systems of Europe amount to 73. Among the common genera, in the *Ericaceae* we find *Rhododendron* with only *R. luteum*, *Erica* with only *E. arborea*, then *Vaccinium* with 3, *Pyrola* with 4, *Orthilia*, *Moneses* and *Monotropa* with one respectively.

In the *Caryophyllaceae*, we find *Stellaria* with 5 taxa, therefore *Myosoton* (1), *Cerastium* (9), *Holosteum* (1), *Sagina* (1), *Herniaria* (3), *Scleranthus* (3), *Bufonia* (1), *Minuartia* (3), *Arenaria* (2), *Moehringia* (1), *Spergularia* (4), *Polycarpon* (1), *Agrostemma* (1), *Coronaria* (1), *Melandrium* (1), *Silene* (10), *Cucubalus* (1), *Gypsophila* (2), *Petrorrhiza*, *Vaccaria*, *Dianthus*, *Saponaria* and *Velezia* with one respectively.

In the first family the most represented genus is therefore *Pyrola*; in the second it is *Silene*.
