Notes: this is the new combination for *Charybdis glaucophylla* Bacch., Brullo, D'Emerico, Pontec. & Salmeri (Martínez-Azorín & al. 2022). According to El Mokni & Pasta (2021) the species is no longer a Sardinian-Corsican endemic, but also grows in Algeria.

§ *Narcissus tazetta* subsp. *aureus* (Loisel.) Baker - G bulb - Circum-Medit. - C. Rocks, garrigues, scarps, wet meadows, scrublands. 164-1,250 m

Notes: on the mountain, plants showing intermediate patterns between the subsp. *tazetta* and the subsp. *aureus* are almost constantly present. Since the tepals are mostly yellow or yellowish, we retain that the subsp. *aureus* should be the only native taxon of this complex in the study area. Flowers with completely whitish tepals and yellow crown are rare and often mixed with others more referable to the subsp. *aureus*. As already noticed by Arrigoni (2006, 2015) Sardinian plants often do not correspond to the typus of *N. tazetta* subsp. *aureus*.

+ *Narcissus tazetta* subsp. *italicus* (Ker Gawl.) Baker - G bulb - Circum-Medit. - (P/CAS?) - RR. Mountain meadows, roadsides. 1,200-1,220 m

Notes: a few plants grow in a former military base dismissed in 1993. This is the first record of this taxon for northern Sardinia and the second for the island, soon after Bartolucci & al. (2023).

- *Narcissus tazetta* L. subsp. *tazetta* - G bulb - Circum-Medit.

Notes: see note above (*Narcissus tazetta* subsp. *aureus*).
